Quick Start

Let’s start by printing on postcard size paper. This section explains the procedures required to print with the paper and the ink cassette (trial kit) included with your printer.

General camera descriptions in this guide refer to digital cameras or digital camcorders compatible with the compact photo printer (CP600). However, in detailed instructions, “camera” refers to “digital cameras”, and “power source” refers to “compact power adapter” throughout this guide. The name of the button which is used for printing differs depending on the model of your camera.

- If the or icon does not display on the camera’s LCD monitor when you connect your camera to this printer, your camera’s firmware may be incompatible with this printer. Please check the Canon BeBit website (http://web.canon.jp/Imaging/BeBit-e.html), or your regional Canon website, for information or to download compatible firmware.

Since this printer complies with an industry standard for direct printing (PictBridge), you can print with non-Canon cameras that also comply with this standard. For details, refer to page 65.

Safety Precautions

• Before using the devices, please ensure that you have read and understood the safety precautions described below. Always ensure that the devices are operated correctly.
• The safety precautions noted on the following pages are intended to instruct you in the safe and correct operation of the devices to prevent injuries or damage to yourself and other persons.
• “Devices” refers to the “printer”, “compact power adapter” or “battery pack” throughout this guide.

⚠ WARNINGS

Do not play the supplied CD-ROM(s) in any CD player that does not support data CD-ROMs. Playing the CD-ROM(s) in an audio CD player (music player) could damage the speakers. It is also possible to suffer from hearing loss from listening with headphones to the loud sounds of a CD-ROM played on a music CD player.

Devices

If the devices emit smoke or a burning odor, or show other signs of significant malfunction, immediately unplug the power cord from the power outlet. Continued operation under these conditions poses risk of fire or electric shock. Be sure that smoke or burning odor subsides, and then contact your dealer or the nearest Canon Customer Support help desk.

If the devices are dropped or the casing becomes damaged, unplug the power cord from the power outlet. Continued operation poses risk of fire or electric shock. Contact your dealer or the nearest Canon Customer Support help desk.

Never rest small metallic objects or liquid containers on top of the devices. If liquid splashes onto the devices, wipe the devices dry using a soft absorbent cloth. If liquid spills into the devices or an object falls into the devices, immediately unplug the power cord from the power outlet. Continued operation poses risk of fire or electric shock. Contact your dealer or the nearest Canon Customer Support help desk.

Do not use flammable solvents such as alcohol, benzene, or paint thinner to clean the devices. Use of such solvents poses a fire risk.

Do not drop or insert metallic or combustible objects into the devices. Entry of foreign objects into the devices may result in fire, electric shock, or equipment failure. Store the devices out of the reach of children.

Do not disassemble or modify the devices. The devices contain high-voltage components, and there is risk of electric shock. If your devices need internal adjustments or repair, contact your dealer or a Canon Customer Support help desk.

Do not touch metal parts of the devices or the power plug during thunderstorms. Lightning strikes may produce lethal voltages within the devices. Keep clear of the devices while thunderstorms are in progress.
**Power**

*Do not exceed the cable and power outlet ratings when operating this product.* Do not operate this product outside of the specified voltage rating. Connecting too many devices to the same outlet may result in fire. Check that the voltage of the outlet is compatible with the devices before plugging them in.

*If the power cord becomes damaged (if internal wiring is exposed, etc.), immediately unplug it from the power outlet.* Continued use poses risk of fire or electric shock.

*Do not plug in or unplug the power cord while your hands are wet, as this may result in electric shock.* When unplugging the power cord, hold it firmly at the plug area. Do not pull directly on the cord, as this may damage or expose the cord’s internal wiring, resulting in risk of fire or electric shock.

*Be sure that the power cord is plugged all the way in.* A loose connection may result in heat buildup, fire, or electric shock.

*Do not damage, modify, or rest heavy objects on the power cord.* Damage to the cord may result in the exposure of live wires, fire, or electric shock.

*Keep the power cord free of dust.* The presence of dust or metallic debris on the plug poses risk of fire or electric shock. If the plug area is not clean, unplug the power cord and then wipe the plug area clean using a dry cloth. Check the plug periodically to make sure it is clean.

**Usage Location**

*Do not place the devices on an unstable or tilted table or desk,* as there is risk that the devices may fall and cause injury.
## CAUTIONS

### Devices

**Do not block the air vents on the printer.** Blocking the vents may cause the inside of the printer to overheat, resulting in damage to internal components and risk of equipment failure or fire. Use the devices in a well-ventilated area.

**Do not rest heavy objects on the devices.** Objects may fall off the devices and cause injury. Weight placed on the devices may deform the casing, resulting in damage to internal parts and posing risk of fire.

**Unplug the devices when you are not using them.** If the devices remain plugged in, there is risk that accidental contact with the device's internal parts may cause electric shock. Leaving the devices plugged in during prolonged periods of non-use poses risk of fire.

**Do not remove the paper cassette from the printer while printing is in progress.** Paper moves back and forth in the cassette four times during printing. Placing your hand in the way of moving paper may result in injury. Wait for printing to finish completely before removing the cassette. Never place your hand into the paper cassette slot.

**Do not reach into internal parts of the devices except as specified in the operating instructions.** Reaching into inappropriate parts of the devices may cause your hand to become caught or injured.

### Power

**Do not move the devices while they are plugged in.** Doing so may damage the power cord. Continued use of a damaged power cord poses risk of fire or electric shock.

**Do not excessively bend or twist the power cord.** Doing so may damage the cord. Continued use of a damaged cable poses risk of fire or equipment failure. Leave about 15 cm (6 in.) of clearance at the front and back of the devices and 10 cm (4 in.) of clearance on both sides to ensure adequate ventilation.

**Do not pull on the power cord.** Doing so may damage the power cord. Continued use of a damaged cord poses risk of fire or electric shock. Always hold the cord by the plug area when unplugging it.
Usage Location

Do not use the devices in locations that are smoky, humid, dusty, or subject to strong vibration. Entry of water or dust into the devices, or internal damage caused by strong vibration, may pose risk of fire or electric shock. Have the devices checked approximately once a year (contact your dealer), preferably before the onset of your area's humid season.

Do not leave the devices exposed to high temperatures. Do not leave in direct sunlight, or close to heating equipment, or in a car with windows closed on a hot day. High temperatures may cause deformation of the devices and pose risk of fire.

Do not use the devices near an open flame. Sheets ejected from the printer (onto the top of the paper cassette) may fall into the flame, resulting in fire.

Do not use the devices close to TV sets or AM radios. Devices’ operation may adversely affect TV and radio reception.
Proper Usage and Handling

■ Usage Location

Do not use near strong magnets or near devices that produce strong electromagnetic fields. Electromagnetic radiation from devices such as TVs and game machines, and strong magnetic fields from devices such as speakers and large motors, may cause distortion in printed images.

Use in a well-ventilated, level area.

Leave about 15 cm (6 in.) of clearance at the front and back of the devices and 10 cm (4 in.) of clearance on both sides. Be sure to leave clearance around the paper-handling slot (at the rear) so that paper has sufficient room to jut out from the slot during printing.

Place the printer so that the air vents on the back will not be blocked. If the air vents blocked, the printer interior could heat up, causing the printer to temporarily stop.

■ Handling Precautions

Please avoid turning the printer’s power on and off needlessly as the printer initialization consumes ink. There may not be enough ink left for the allotted sheets in the set.

When the printer is not in use, please remove the battery pack.

Unplug the printer when you are not using it. But please note that you should plug in and run the printer at least once every six months to ensure that it remains functional.

Before transporting the printer, remove the paper and ink cassettes and close the paper cassette cover and the ink cassette cover. If dirt or foreign objects enter the printer, print quality may deteriorate.

Pack the printer into an appropriate case for transport. If a case is not available, wrap it with cloth or other protective material to protect against scratches.

Never use volatile compounds or insecticides on the printer, and do not allow rubber or vinyl material to remain in prolonged contact with the printer. These materials may cause deformation of the printer’s casing.

□ Overheating

If the printer overheats, it will temporarily stop operating. This does not mean that the printer has malfunctioned. The printer will resume normal printing as soon as it cools down. Temporary stoppages are most likely to occur in the following cases:

• When printing continuously.
• If the room is unusually warm.
• If the air vents on the back of the printer are blocked or if ventilation is inadequate.
To Prevent Damage from Condensation

Condensation may form in the printer if you suddenly move it from a cold location to a warm location. To prevent damage that might be caused by condensation, place the printer in a sealed plastic bag prior to moving it, and allow it to reach room temperature before using it. Stop using the printer immediately if you detect condensation. Continued use may damage the equipment. Wait until the water droplets have evaporated completely before resuming use.

Cleaning the Printer

Never use benzene, paint thinner, or other volatile solvents to clean the printer. Volatile solvents may cause deformation or peeling of the printer's casing. To clean the printer, wipe it with a soft dry cloth. If stronger cleaning is required, wipe first with a cloth moistened with a dilute neutral solvent, then wipe again with a soft dry cloth. If you use a chemical cleaning cloth, read the instructions that come with it and observe all indicated precautions.

Keep the air vents clean and free of dust. Clean the vents as necessary. Dust that enters the printer through the vents may land on the ink sheet, resulting in poor print quality and possibly leading to printer breakdown. If the ink sheet becomes dusty, remove the ink cassette and replace it with a new one.

Proper Handling of Ink Cassettes

Please use only the ink cassettes specified for use by Canon.

Do not open the ink cassette cover while printing is in progress, and do not pull the ink cassette out. These actions may damage the printer.

Do not touch or pull on the ink sheet. There may not be enough ink left for the allotted sheets in the set.

Do not handle the ink cassettes with wet or sweaty hands.

Allow ink cassettes to reach room temperature before installing and using them. Condensation may form if you suddenly move ink cassettes from a cold location to a warm location. If there is risk of condensation, leave the cassette in its packaging until it reaches room temperature, and wipe away any moisture before loading it.

If you are not planning to use the printer for a while, remove and store the ink cassette.
Proper Handling of Paper Cassettes

Do not apply excessive force to the paper cassette. Force or impact on the cassette may result in paper jams or equipment damage.

Do not bend or deform the spring located at the rear of the middle cover of the paper cassette.

Do not place any foreign objects in the print output receptacle (on the top of the paper cassette). This area is for paper only.

If you are not planning to use the printer for a while, remove the paper cassette, close the paper cassette’s top cover and store the paper cassette. Also remove the paper from the paper cassette and store it horizontally.

Proper Handling of Paper

Please use only the paper types specified for use by Canon.

Paper must be printed on the glossy side (the side without any printed markings). Always load paper into the cassette with the glossy side up. Loading the paper the wrong way may result in poor print quality, and in some cases may cause damage to the printer.

Do not tear or bend the paper’s perforated edges before printing. Tearing the paper’s perforated edges will cause the ink sheet to wind up automatically and waste one print’s worth of ink. If this happens, there will not be enough ink left to print all the paper sheets included in the kit.

Do not use label sheets on which labels are partially peeled off.

Do not touch the print side of the paper with your fingers. Always hold the paper along the edges (outside the perforated border).

WRONG

RIGHT

Be sure that hands are dry before touching the paper. Sharp objects will scratch the paper surface. Keep the paper surface free from fingerprints, dust, water droplets, etc.

Do not write on the paper before printing. Writing on paper before printing on it may result in malfunction.
Do not touch paper while it is being printed. During printing, the sheet repeatedly moves back and forth along the top of the paper cassette and in and out through the paper-handling slot. Please do not touch the sheet during this process as this could damage the printer.

Do not allow too many prints to accumulate in the print output receptacle. Do not allow more than 9 sheets to accumulate in the print output receptacle.

You may write on the paper with an oil-based pen, but to avoid smudging please allow ink time to dry before touching it.

Allow the paper to reach room temperature before installing and using it. Condensation may form if you suddenly move the paper from a cold location to a warm location. If there is risk of condensation, leave the paper in its packaging until it reaches room temperature, and wipe away any moisture before loading it.

Please avoid the following actions as they may result in color change, color fading or color bleeding.
- Sticking any type of adhesive tape onto the print surface.
- Allowing print surfaces to come into contact with vinyl materials.
- Applying alcohol or other volatile solvents to the print surface.
- Leaving print surfaces tightly pressed against any other surfaces or objects for prolonged periods.

Paper Storage

If you wish to mount prints into an album, select an album with nylon-based sleeves, or with propylene or cellophane sleeves. Other types of sleeves may cause color loss or color bleeding.

Color change may occur over time in accordance with conditions of storage. Canon assumes no liability for color changes.

To avoid print quality deterioration, do not store your prints in the following types of locations.
- Locations that reach temperatures above 40 °C (104 °F)
- Humid or dusty locations
- Locations exposed to direct sunlight.

Remove unused paper from the paper cassette, return it to the bag and then into its original package. Store the package horizontally.

Others

When opening a color ink/paper set (full-sized label set, label set), check the contents. If something seems to be missing or appears to be damaged, contact the dealer for assistance.

The battery pack is charged while installed on the printer, and the printer is connected to the compact power adapter supplied with the printer.

When using the battery pack, if the battery status is low, the finished print may not be ejected into the print output receptacle completely. If this happens, gently pull out the paper.

- One ink cassette can print to all of the paper included in the ink/paper set.
Loading the Ink Cassette

1. Open the ink cassette compartment cover.

2. Remove any slack from the ink sheet.
   - Push in on the sprocket, and turn it gently in the indicated direction to take up the slack until the ink sheet straightens out (It will not be possible to print to all of the paper if you overwind the ink sheet).

3. Hold the cassette so that the embossed arrow is at the top, and insert it all the way into the compartment (in the direction of the arrow).
   - Be careful to avoid touching or pulling on the ink sheet when inserting the cassette.
   - Push the cassette all the way in, so that it clicks into place.
   - When you are ready to remove the ink cassette, lift the clip and pull the cassette out.

4. Close the ink cassette compartment cover.
   - You can check the name of the ink cassette in the printer through the display window on the top of the printer.

- Do not reuse empty ink cassettes. Attempting to reuse an empty ink cassette may result in malfunction or damage to the printer.
- Please also refer to the Proper Handling of Ink Cassettes section of Proper Usage and Handling (p. 19).
Placing the Paper into the Paper Cassette

1. Open the paper cassette’s top cover and middle cover.
   - Open the top cover, then push the middle cover in the direction of the arrow and lift it up.

2. Fan the paper stack properly and place the paper into the paper cassette, with the printable side (glossy side) facing up.
   - Insert the postcard size paper with the glossy side up and the address/stamp side next to the middle cover as shown in the figure.
   - Do not touch the glossy side of the paper (to avoid fingerprints) when you fan the paper stack.
   - Insert the wide size paper (100 × 200 mm (4 × 8 in.)) as shown in the figure below.
   - Insert the credit card size paper as shown in the figure below.

- Paper (Glossy side up)
- (Address/stamp side next to the middle cover)
- Wide Size
- Paper (Glossy side up)

Place the middle cover back to its original position.

• After pulling the middle cover down, slide it in the direction of the arrows until it clicks back into place.
• Do not close the top cover.

- Please use specified paper types only.
- Do not insert more than 18 sheets in the paper cassette.
- Do not insert more than 12 sheets wide size paper (100 × 200 mm (4 × 8 in.)) in the paper cassette.
- **Printed or fed paper is coated even when nothing is printed on the paper. Therefore, never reuse the printed or fed paper for printing. Reused paper may stick to the ink sheet, resulting in damage to the printer.**
- Please also refer to the *Proper Handling of Paper Cassettes* and the *Proper Handling of Paper* sections of *Proper Usage and Handling* (p. 20).
Loading the Paper Cassette

1. Open the paper cassette compartment cover.

2. Push the paper cassette all the way into the paper cassette slot.
   - Be sure the paper is set correctly before pushing the cassette in.
   - Insert the paper cassette evenly so that it slides over the bottom of the slot entrance.

- Do not remove the paper cassette while feeding, printing, or ejection is in progress.

- The printer outputs the finished prints into the receptacle onto the top of the printer cassette (top of the middle cover or inside of the top cover). Be sure to close the middle cover and open the top cover so that output can proceed normally.
Connecting a Power Source and the Camera to the Printer

Connect the camera to the printer using the cable (included with the camera) and turn the printer’s power on.

For more detailed camera connection instructions, refer to your Camera User Guide or Direct Print User Guide.

*1 Canon cameras compatible with CP600, and non-Canon cameras compatible with PictBridge can also be connected.

*2 Please use the camera’s compact power adapter or a fully charged battery pack (or charged batteries).

The numbered steps in the following instructions refer to the numbers in the above illustration.

1. **Place the printer on a flat area.**
   - Be sure to leave about 15 cm (6 in.) of clearance around the paper-handling slot (at the rear) so that paper has sufficient room to jut out from the slot during printing.

2. **Connect the supplied power cord to the supplied Compact Power Adapter CA-CP200.**
3 Insert the plug in a power outlet.

4 Connect the Compact Power Adapter cable to the printer.

5 Connect the interface cable to the camera.
   • Use the interface cable that came with your camera.

6 Connect the interface cable to the printer.
   • Insert the cable in the left port, with the mark on the cable facing down.

7 Press the power button until the indicator goes on.
   • The indicator lights green once the printer powers up.

- Turning the Printer’s Power Off
   Press the power button until the indicator goes off.

   • We recommend that you also connect the camera’s compact power adapter (sold separately or included with the camera) when using the camera with your printer. If you wish to run the camera on battery power, be sure that batteries are fully charged.
   • When connecting the cable, be sure that the connectors on the cable match up correctly with the connectors on the camera and printer.
   • Use an easily accessible power outlet for the printer’s power cord, so that you can unplug the printer cable quickly in the event of a problem.
   • Please also refer to the Usage Location section of Proper Usage and Handling for information about printer usage location (p. 18).

   • Some camera models do not come with a compact power adapter. For details, please see the System Map that came with your camera.
Printing

This section explains the flow of printing operations with Canon cameras*. For more details, refer to your Camera User Guide or Direct Print User Guide.
* In other cases, please refer to the Printing with Non-Canon Digital Cameras (p. 65).

1. **Turn the camera’s power on and display the images.**
   - Check that the 
     (PictBridge)/ 
     (Canon Direct Print) icon is displayed in the upper left corner of the LCD monitor.
   - Some camera models automatically power up when the cable is connected to the printer. The icon then displays on the LCD monitor.

2. **Display the images to be printed and press the SET or SELECT button.**
   - If your camera has the 
     (Print/Share) button, printing starts immediately after you press the 
     button (Step 3 is not necessary).

3. **Select [Print] and press the SET or SELECT button.**
   - Printing starts. The camera returns to the playback screen once printing is successfully completed.
   - The display window light changes color during printing in the following order: yellow → pink (magenta) → light blue (cyan) → white → blue.

If 

or 

does not display in step 1, check the following:
- Is the cable correctly connected? (p. 29)
- Is the printer’s power on? (p. 29)
- Is your camera’s firmware compatible with this printer?
  → Check the Canon BeBit website or your regional Canon website.

If printing does not start, check the following:
- Does the camera’s LCD monitor display a message? (p. 42)
■ Printing on Wide Size (100 × 200 mm (4 × 8 in.)) Paper

The printing area may vary depending on the camera use.

The cards are printed as explained below.

If Appear in step 1 on page 31
Printed on the whole card.

If  appears in step 1 on page 31
Printed on the 100 × 150 mm (4 × 6 in.) portion of the card.

The upper and lower portions of an image are trimmed.

Nothing is printed on this portion so you can write your message with an oil-based pen.

• If  appears in step 1 on page 31, select [Default] on the paper size setting screen.

■ Printing Images from a Mobile Phone

You can transmit and easily print out the images shot by a camera equipped mobile phone.

The mobile phone must have the following features.
• JPEG image recording capacity
• Infrared data communication (with an IrDA compliant infrared data communication port)

Refer to your mobile phone's manual when using infrared data communication.

1 Shoot an image using your mobile phone.
• Set the image type to JPEG.

2 If any camera is connected to the printer, disconnect the camera.
• You can leave your computer connected to the printer.
Load the paper cassette that matches the size of paper you want to print and the ink cassette.

- The printer enlarges or reduces the size of the image according to the paper size and sets the print direction to vertical or horizontal automatically. The upper, lower, left or right portion(s) of the printed image may be cut depending on the combination of the image size and paper size.
- When you print wide size paper (100 x 200 mm (4 x 8 in.)), the size of the printed image will be the same as the postcard size. You cannot do full-size borderless printing.

Transmit an image from your mobile phone to the printer.

- Aim the mobile phone's infrared port at the printer's infrared data receiver and transmit the image data to the printer. See the illustration on the left for the transmittable distance. Note that the distance differs depending on the mobile phone model. Refer to your mobile phone's manual.
- The printer's indicator blinks green while receiving the data. If any error occurs the indicator lights green (returns to the original state). Check the message appearing on the mobile phone display if an error occurs.
- If the data transmission fails, move the mobile phone closer to the front of the printer's infrared data receiver and repeat the procedure.

Printing starts after the data transmission is complete.
When the Indicator Blinks

The indicator of the printer blinks if any error occurs during printing.

Battery Usage

Using the Battery Pack

You can use the rechargeable battery pack (Battery Pack NB-CP2L) to print. The Battery Pack NB-CP1L (sold separately) cannot be used.

■ Charging the Battery Pack

Attach the battery pack NB-CP2L to the printer to charge it.

1. Remove the battery pack’s terminal cover.
   - When the battery pack is not in use, always store it with its terminal cover on.

2. Press the battery cover lever down and remove the battery cover.

3. Install the battery pack.
   - Slide the battery pack into place, in the direction of the arrow, and push it in until it clicks into place.
   - To remove the battery pack, push the battery cover lever down and pull the battery pack out. Replace the battery cover afterwards.

4. Attach the power cord to the compact power adapter CA-CP200 and plug it into a power outlet.
5 Connect the compact power adapter cable to the printer.
• The indicator lights orange while charging and turns off once the battery pack is fully charged.

6 Disconnect the compact power adapter cable from the printer once charging is complete.

- If the power button is pressed and the printer’s power turns on while charging the battery pack, charging will stop. Pressing the power button again will turn off the printer and charging will resume.
- Do not use the battery pack in products other than those recommended by Canon.
- Do not charge battery packs other than the battery pack NB-CP2L.
- Do not carry or store the battery pack with metal objects with sharp edges, such as paper clips and pins. Always put the terminal cover on the battery pack’s terminal when carrying it or before storing it.
- Avoid dropping or subjecting the battery pack to severe impact.
- Do not apply heat or expose the battery pack to open flame.
- Do not cover the compact power adapter with anything, such as a tablecloth, cushion or blanket, when it is charging. Heat will build up internally and possibly lead to fire.
- Immediately flush water over parts of the body or clothing that come into contact with the inner contents of a battery if the outer casing incurs damage. If any of these substances should contact internal tissues, such as eyes or the mouth, immediately flush with water and seek medical assistance.
• When the battery pack is used to power the printer, the printer will automatically turn off if it is idle for 5 minutes or more.
• This is a lithium ion battery pack so there is no need to completely use or discharge it before recharging. It can be charged at any charge state.
• It takes approximately 150 minutes to bring a fully discharged battery pack to a full charge state (based on standard Canon testing criteria).
• Charge it within a temperature range of 5 to 40 °C (41 to 104 °F).
• The charge adapter may emit noises while charging. This is not a malfunction.
• Do not charge the battery pack for more than 24 continuous hours to avoid performance loss.
• When the printer is not in use, remove the battery pack, replace its terminal cover and store it in a cool place (30 °C/86 °F or less). Charge it before using it again.
• Even charged battery packs continue to discharge naturally. You are advised to charge the battery on the day of use, or one day before, to ensure a full charge.
• Since storing a fully charged battery pack for long periods of time (about 1 year) can shorten its lifecycle or affect performance, you are recommended to discharge the battery pack fully in the printer before storing it in a cool place (30 °C/86 °F or less). If you do not use the battery pack for long periods of time, charge it fully and discharge it fully in the printer at least once a year before returning it to storage.
• The printer consumes the battery charge when the power is on even when a function is not being used. To conserve the battery charge, be particularly attentive in turning the power off.
• Remove the battery pack when the printer is not in use. The battery pack continues to discharge a small amount when left in the printer even with the power turned off. This shortens the battery life.
• Although the battery pack’s maximum operating range is 5 to 40 °C (41 to 104 °F), the optimal range is 10 to 30 °C (50 to 86 °F). At cold temperatures, such as those experienced on ski hills, performance will temporarily decline, reducing the usable time.
• If the usable time of a battery pack diminishes substantially even when fully charged, it should be replaced.
**Battery Status**

If battery status is running down and the indicator of the printer blinks orange while the printer is connected to the camera, the camera’s LCD monitor may display the following message.

</tbody>
</table>

**Test conditions:** Normal temperature (23 °C/73 °F), Canon images, continuous print.

* The above data may vary according to the printing environment and the image to be printed.
* At low temperatures, the battery pack performance may diminish and the low battery icon may appear very rapidly.
If the printer does not seem to be working properly, run through the checks below to see if you can identify and correct the problem. If you are not able to solve the problem, please call your dealer or contact a Canon Customer Support help desk for assistance.

Connecting the Printer to Your Computer

Notes about connection

In using the USB cable, be sure to connect the printer directly to your computer.
If you connect the USB cable via a USB hub, the printer may not function properly.

Do not use other USB devices (with the exception of a USB mouse or keyboard) with the printer. The printer may not function properly.
Disconnect the other USB devices from your computer and then reconnect the printer.

Do not connect two or more direct print compatible printers (all CP series printers) to the same computer.
The printers may not function properly.

For Windows, when connecting the printer to your computer, we recommend that you connect it to the same USB port you used to install the printer driver.
If you connect the printer to a different USB port, Windows may create a copy of the printer driver. This depends on your Windows version and the printer driver, and does not affect the operation of the printer.
To delete a copy of the printer driver, proceed as follows:
1. Disconnect the USB cable from your computer.
2. Delete the copy of the printer driver as follows (do not use the uninstaller.)
   (1) For Windows XP, click the [Start] button and select [Control Panel], [Printers and Other Hardware], and [Printers and Faxes].
   For Windows 98 SE/Windows Me/Windows 2000, click the [Start] button and select [Settings], and [Printers].
   (2) Right-click the copy of the printer driver and then select [Delete] on the shortcut menu.
3. Restart your computer. Connect the printer to the USB port you used to install the printer driver.

• Do not put your computer into the standby mode (or sleep mode) while the printer is connected to a USB port.
• If you accidentally do so, do not disconnect the USB cable from your computer while it is in the standby mode; instead, leaving the USB cable connected, first return your computer to its normal mode. If you remove the USB cable while your computer is in the standby mode, your computer may not be able to return to its normal mode. For details on your computer's standby mode, refer to the documentation provided with your computer.
1 Connect one end of a commercially available USB cable (sold separately) to the USB port on the printer, and the other end to a USB port on your computer.

- There is no need to turn off the printer or your computer.
- When connecting the printer to your computer, make sure the connectors on the ends of the USB cable match the ports on the printer and your computer.
- For the location and direction of your computer’s USB port, refer to the documentation provided with your computer.

- When disconnecting the USB cable, you do not need to turn off the printer or your computer.

Since the CP600 printers support the direct print *PictBridge* standard, you can connect *PictBridge* compliant non-Canon digital cameras to easily print high image quality photos.

* PictBridge: *PictBridge* is an industry standard for direct printing that allows you to print images without using a computer by directly connecting a digital camera or digital camcorder (hereafter “camera”) to a printer, regardless of their brands and models.

### Before Using the Printer

Please read carefully the user guide that came with your camera and make sure that:

- The camera is *PictBridge* compliant.
- You are using the USB cable for the camera/computer connection to connect the printer to the camera. (This cable may be included with the camera)
- You set the print settings with the camera. For details, refer to the camera’s user guide.

### Connecting the Camera

Insert one end of the USB cable used for the camera/computer connection in the printer’s direct print port (see p. 29) and insert the other end in the camera’s terminal. (For details, refer to the camera’s user guide)

- The printer’s indicator blinks green several times once the printer and camera are correctly connected. The indicator lights steadily green once it is ready to print.
- If a problem occurs during a connection or during printing, the printer’s indicator lights or blinks red. If this happens, the error message that appears on the camera’s LCD monitor may differ according to your camera model.

- Printing speed may differ according to your camera model and the image’s number of recorded pixels. (The value written on page 44 is a printing speed obtained when printing with a Canon camera.)
