What Is IJ Scan Utility (Scanner Software)?

IJ Scan Utility is an application that allows you to easily scan photos, documents, etc.

You can complete from scanning to saving at one time by simply clicking the corresponding icon in the IJ Scan Utility main screen.

What You Can Do with IJ Scan Utility

Scan Easily according to Purposes

You can scan by simply clicking an icon such as **Auto** to scan easily, **Photo** to scan with settings suitable for photos, or **Document** to sharpen text in a document or magazine for better readability, according to the item type or your purpose.

>>> Note

Refer to "IJ Scan Utility Main Screen" for details on the IJ Scan Utility main screen.

Save Scanned Images Automatically

Scanned images are automatically saved in a preset folder. You can change the folder as required.

>>> Note

The default save folders are as follows.

Windows 8: My Documents folder

Windows 7: My Documents folder

Windows Vista: Documents folder

Windows XP: My Documents folder

Refer to "Settings Dialog Box" for how to specify a folder.

Integrate with Applications

You can utilize scanned images through integration with other applications; display scanned images in your favorite application, attach them to e-mails, extract text from images, and more.

>>> Important

Some functions are available only when My Image Garden is installed.

>>> Note

Refer to "Settings Dialog Box" for how to set the applications to integrate with.

Starting IJ Scan Utility

>>> Note

- If you have more than one scanner or have changed the connection from USB connection to network connection, set up the network environment from IJ Scan Utility.
- → Network Scan Settings

Follow the steps below to start IJ Scan Utility.

Windows 8:

Select IJ Scan Utility on the Start screen to start IJ Scan Utility.

If **IJ Scan Utility** is not displayed on the Start screen, select the **Search** charm, then search for "IJ Scan Utility".

Windows 7/Windows Vista/Windows XP:

From the Start menu, select All Programs > Canon Utilities > IJ Scan Utility > IJ Scan Utility to start IJ Scan Utility.

Easy Scanning with Auto Scan

You can scan easily by automatically detecting the item type.

>>> Important

- The following types of items may not be scanned correctly. In that case, adjust the cropping frames (scan areas) in whole image view of ScanGear (scanner driver) and scan again.
 - Photos that have a whitish background
 - Items printed on white paper, hand-written documents, business cards, etc.
 - Thin items
 - Thick items
- 1. Make sure that your scanner or printer is turned on.
- 2. Place items on the platen of your scanner or printer.
 - → Placing Items (When Scanning from a Computer)
- 3. Start IJ Scan Utility.
- 4. Click Auto.

Scanning starts.

- Click Cancel to cancel the scan.
- To apply suitable corrections based on the item type, click **Settings...**, then select the **Apply recommended image correction** checkbox in the **Settings (Auto Scan)** dialog box.
- Scanned images are saved in the folder set for Save in in the Settings (Auto Scan) dialog box displayed by clicking Settings.... In the Settings (Auto Scan) dialog box, you can also make advanced scan settings.
- Refer to the following pages to scan by specifying the item type.
- → Scanning Photos
- → Scanning Documents

Scanning Photos

You can scan photos placed on the platen with settings suitable for photos.

- 1. Place the photo on the platen.
 - ⇒Placing Items (When Scanning from a Computer)
- 2. Start IJ Scan Utility.
- Click Settings..., select the Settings (Photo Scan) dialog box, then set the paper size, resolution, etc. as required.
 When setting is completed, click OK.
- 4. Click Photo.

Scanning starts.

- Click Cancel to cancel the scan.
- Scanned images are saved in the folder set for **Save in** in the **Settings (Photo Scan)** dialog box displayed by clicking **Settings...**. In the **Settings (Photo Scan)** dialog box, you can also make advanced scan settings.

Scanning Documents

You can scan items placed on the platen with settings suitable for documents.

- 1. Place the item on the platen.
 - ⇒Placing Items (When Scanning from a Computer)
- 2. Start IJ Scan Utility.
- Click Settings..., select the Settings (Document Scan) dialog box, then set the paper size, resolution, etc. as required.
 When setting is completed, click OK.
- 4. Click Document.

Scanning starts.

- Click Cancel to cancel the scan.
- Scanned images are saved in the folder set for **Save in** in the **Settings (Document Scan)** dialog box displayed by clicking **Settings...**. In the **Settings (Document Scan)** dialog box, you can also make advanced scan settings.

Scanning with Favorite Settings

You can scan items placed on the platen with your favorite settings saved beforehand.

This is convenient for saving frequently used settings or when specifying scan settings in detail.

- 1. Start IJ Scan Utility.
- 2. Click **Settings...**, select the **Settings (Custom Scan)** dialog box, then set the select source, resolution, etc.

When setting is completed, click **OK**.

>>> Note

- Once the settings are made, you can scan with the same settings from the next time.
- **3.** Place the item on the platen.
 - ⇒ Placing Items (When Scanning from a Computer)
- 4. Click Custom.

Scanning starts.

- Click Cancel to cancel the scan.
- Scanned images are saved in the folder set for **Save in** in the **Settings (Custom Scan)** dialog box displayed by clicking **Settings...**. In the **Settings (Custom Scan)** dialog box, you can also make advanced scan settings.

Scanning Items Larger than the Platen (Image Stitch)

You can scan the left and right halves of an item larger than the platen and combine them back into one image. Items up to approximately twice as large as the platen are supported.

>>> Note

- The following explains how to scan from the item to be placed on the left side.
- 1. Start IJ Scan Utility.
- Click Settings..., select the Settings (Scan and Stitch) dialog box, then set the item type, resolution, etc. as required.
 When setting is completed, click OK.
- 3. Click Stitch.

The **Image Stitch** window appears.

4. In Select Output Size, select an output size according to the paper size.

5. Make sure that Scan from Left is selected in Scan Direction.

- **6.** Place the item that is to be displayed on the left side of the screen facedown on the platen.
- 7. Click Start Scanning Image 1.

The first item is scanned and appears in 1.

- Click Cancel to cancel the scan.
- **8.** Place the item that is to be displayed on the right side of the screen facedown on the platen.
- 9. Click Start Scanning Image 2.

The second item is scanned and appears in 2.

>>> Note

- Click Cancel to cancel the scan.
- 10. Adjust the scanned images as required.

Use the Toolbar to rotate or zoom in/out, or drag the images to adjust their positions.

>>> Note

- Select the Adjust cropping frames checkbox to specify the area to be saved.
- → Adjusting Cropping Frames in the Image Stitch Window
- To scan an item again, select the image in the Preview area or the thumbnail at the top of the screen, then click (Delete). The selected image is deleted, allowing you to scan the item again.

11. Click Save.

The combined image is saved.

- Refer to "Image Stitch Window" for details on the Image Stitch window.
- You can make advanced scan settings in the **Settings (Scan and Stitch)** dialog box displayed by clicking **Settings...**.

Scanning Multiple Items at One Time

You can scan two or more photos (small items) placed on the platen at one time and save each image individually.

>>> Important

- The following types of items may not be scanned correctly. In that case, adjust the cropping frames (scan areas) in whole image view of ScanGear (scanner driver) and scan again.
 - Photos that have a whitish background
 - Items printed on white paper, hand-written documents, business cards, etc.
 - Thin items
 - Thick items

Refer to "Scanning Multiple Documents at One Time with ScanGear (Scanner Driver)" for your model from Home of the *Online Manual* for details.

Using Auto Scan

Whether there are multiple items or not is detected automatically. Click Auto and scan.

→ Easy Scanning with Auto Scan

Not Using Auto Scan

In the Settings dialog box, set Paper Size to Auto scan and scan.

- The screens for scanning with favorite settings are used as examples in the following descriptions.
- 1. Place the items on the platen.
 - → Placing Items (When Scanning from a Computer)
- 2. Start IJ Scan Utility.
- 3. Click Settings....

The Settings dialog box appears.

4. Click Custom Scan.

5. Select **Select Source** according to the items to be scanned.

6. Select Auto scan for Paper Size, then click OK.

The IJ Scan Utility main screen appears.

- Refer to the following pages for details on the setting items in the Settings dialog box.
- ⇒ Settings (Photo Scan) Dialog Box
- → Settings (Document Scan) Dialog Box
- → Settings (Custom Scan) Dialog Box

7. Click Custom.

Multiple items are scanned at one time.

- Click Cancel to cancel the scan.
- Scanned images are saved in the folder set for Save in in the corresponding Settings dialog box displayed by clicking Settings.... In each Settings dialog box, you can also make advanced scan settings.

Saving after Checking Scan Results

You can check the scan results, then save the images to a computer.

>>> Important

You cannot check the scan results before saving when scanned using Auto scan.

>>> Note

- The screens for scanning photos are used as examples in the following descriptions.
- 1. Start IJ Scan Utility.
- 2. Click Settings....

The Settings dialog box appears.

3. Click Photo Scan.

4. Select the Check scan results checkbox, then click OK.

The IJ Scan Utility main screen appears.

>>> Note

- Refer to the following pages for details on the setting items in the Settings dialog box.
- ⇒ Settings (Photo Scan) Dialog Box
- → Settings (Document Scan) Dialog Box
- → Settings (Custom Scan) Dialog Box
- → Settings (Scan and Stitch) Dialog Box
- → Settings (ScanGear) Dialog Box

5. Click Photo.

Scanning starts.

When scanning is completed, the **Save Settings** dialog box appears.

>>> Note

Click Cancel to cancel the scan.

6. Change the image order or file save options as required.

You can change the image order or file save options in the Save Settings dialog box.

>>> Note

■ The default save folders are as follows.

Windows 8: **My Documents** folder Windows 7: **My Documents** folder Windows Vista: **Documents** folder Windows XP: **My Documents** folder

7. Click OK.

Scanned images are saved according to the settings.

Sending Scanned Images via E-mail

You can send scanned images via e-mail.

>>> Note

- The screens for scanning photos are used as examples in the following descriptions.
- 1. Start IJ Scan Utility.
- 2. Click Settings....

The Settings dialog box appears.

3. Click Photo Scan.

4. Select **Attach to e-mail** in **Application Settings**, then select an e-mail client.

>>> Note

- You can add e-mail clients to use for attachments from the pull-down menu.
- If None (Attach Manually) is selected, manually attach scanned and saved images to e-mail.

5. Click OK.

The IJ Scan Utility main screen appears.

>>> Note

- Refer to the following pages for details on the setting items in the Settings dialog box.
- → Settings (Auto Scan) Dialog Box
- → Settings (Photo Scan) Dialog Box
- ⇒ Settings (Document Scan) Dialog Box
- → Settings (Custom Scan) Dialog Box
- ⇒ Settings (ScanGear) Dialog Box

6. Click Photo.

Scanning starts.

When scanning is completed, the specified e-mail client starts and the images will be attached to a new message.

- Click Cancel to cancel the scan.
- The scanned images are saved according to the settings made in the Settings dialog box.
- When the **Check scan results** checkbox is selected in the Settings dialog box, the **Save Settings** dialog box appears. After you set the save options and click **OK**, the scanned images are saved and automatically attached to a new message of the specified e-mail client.
- **7.** Specify the recipient, enter the subject and message, then send e-mail. Refer to the manual of your e-mail client for e-mail settings.

Extracting Text from Scanned Images (OCR)

Scan text in scanned magazines and newspapers and display it in Notepad (included with Windows).

>>> Note

- You can extract text when scanning via **Document**, **Custom**, or **ScanGear**.
- The screens for scanning documents are used as examples in the following descriptions.

1. Start IJ Scan Utility.

2. Click Settings....

The Settings dialog box appears.

3. Click Document Scan.

>>> Note

- For **Resolution**, only **300 dpi** or **400 dpi** can be set when **Start OCR** is selected in **Application Settings**.
- **4.** Select **Start OCR** for **Application Settings**, then select the application in which you want to display the result.

- When My Image Garden is specified, after the image is scanned, the text in the image is extracted and appears in Notepad (included with Windows).
- 5. Click OK.

The IJ Scan Utility main screen appears.

>>> Note

- Refer to the following pages for details on the setting items in the Settings dialog box.
- → Settings (Document Scan) Dialog Box
- → Settings (Custom Scan) Dialog Box
- → Settings (ScanGear) Dialog Box

6. Click Document.

Scanning starts.

When scanning is completed, the scanned images are saved according to the settings, and the extracted text appears in the specified application.

- Click Cancel to cancel the scan.
- Text displayed in Notepad (included with Windows) is for guidance only. Text in the image of the following types of documents may not be detected correctly.

- Documents containing text with font size outside the range of 8 points to 40 points (at 300 dpi)
- Slanted documents
- Documents placed upside down or documents with text in the wrong orientation (rotated characters)
- Documents containing special fonts, effects, italics, or hand-written text
- Documents with narrow line spacing
- Documents with colors in the background of text
- Documents containing multiple languages

IJ Scan Utility Main Screen

Follow the steps below to start IJ Scan Utility.

Windows 8:

Select IJ Scan Utility on the Start screen to start IJ Scan Utility.

If **IJ Scan Utility** is not displayed on the Start screen, select the **Search** charm, then search for "IJ Scan Utility".

Windows 7/Windows Vista/Windows XP:

From the Start menu, select All Programs > Canon Utilities > IJ Scan Utility > IJ Scan Utility to start IJ Scan Utility.

You can complete from scanning to saving at one time by simply clicking the corresponding icon.

Product Name

Displays the name of the product that IJ Scan Utility is currently set to use.

If the displayed product is not the one you want to use, select the desired product from the list.

In addition, for network connection, select one with "Network" after the product name.

>>> Note

Refer to "Network Scan Settings" for how to set up a network environment.

Auto

Detects the type of items automatically and saves them to a computer. The data format for saving will also be set automatically.

Save settings and the response after scanning can be specified in the **Settings (Auto Scan)** dialog box.

Photo

Scans items as photos and saves them to a computer.

Scan/save settings and the response after scanning can be specified in the **Settings** (**Photo Scan**) dialog box.

Document

Scans items as documents and saves them to a computer.

Scan/save settings and the response after scanning can be specified in the **Settings** (**Document Scan**) dialog box.

Custom

Scans items with your favorite settings and saves the images to a computer. The item type can be automatically detected.

Scan/save settings and the response after scanning can be specified in the **Settings** (**Custom Scan**) dialog box.

Stitch

Displays the **Image Stitch** window in which you can scan the left and right halves of an item larger than the platen and combine the scanned images back into one image. Scan/save settings and the response after scanning can be specified in the **Settings** (Scan and Stitch) dialog box.

ScanGear

Starts ScanGear (scanner driver) in which you can make image corrections and color adjustments when scanning.

Scan/save settings and applications can be specified in the **Settings (ScanGear)** dialog box.

Instructions

Opens this guide.

Settings...

Displays the Settings dialog box in which you can specify the scan/save settings and the response after scanning.

Settings Dialog Box

There are two tabs in the Settings dialog box: (Scanning from a Computer) and (General Settings). When you click a tab, the view in the red frame switches and you can make advanced settings to functions on each tab.

(Scanning from a Computer) Tab

You can specify how to respond when scanning from IJ Scan Utility or My Image Garden.

- ⇒ Settings (Auto Scan) Dialog Box
- ⇒ Settings (Photo Scan) Dialog Box
- ⇒ Settings (Document Scan) Dialog Box
- ⇒ Settings (Custom Scan) Dialog Box
- ⇒ Settings (Scan and Stitch) Dialog Box
- ⇒ Settings (ScanGear) Dialog Box

(General Settings) Tab

You can set the product to use, file size restriction on e-mail attachment, language to detect text in images, and folder in which to save images temporarily.

⇒ Settings (General Settings) Dialog Box

Settings (Auto Scan) Dialog Box

Click **Auto Scan** on the (Scanning from a Computer) tab to display the **Settings** (**Auto Scan**) dialog box.

In the **Settings (Auto Scan)** dialog box, you can make advanced scan settings to scan by automatically detecting the item type.

- (1) Scan Options Area
- (2) Save Settings Area
- (3) Application Settings Area

>>> Important

■ When the Settings dialog box is displayed from My Image Garden, the setting items for **Application Settings** do not appear.

Supported Items

Photos, postcards, business cards, magazines, newspapers, documents, and BD/DVD/CD.

>>> Important

- To scan the following types of items, specify the item type and size in the **Settings** (**Photo Scan**) dialog box, **Settings** (**Document Scan**) dialog box, or **Settings** (**Custom Scan**) dialog box, then click **Photo**, **Document**, or **Custom** in the IJ Scan Utility main screen. You cannot scan correctly with **Auto**.
 - A4 size photos

- Text documents smaller than 2L (5 inches x 7 inches) (127 mm x 178 mm), such as paperback pages with the spine cut off
- Items printed on thin white paper
- Long narrow items such as panoramic photos
- Reflective disc labels may not be scanned as expected.
- Place items to be scanned on the platen correctly. Otherwise, items may not be scanned correctly.

Refer to "Placing Items (When Scanning from a Computer)" for how to place items.

>>> Note

■ To reduce moire in scans, set **Select Source** to **Magazine** in the **Settings** (**Document Scan**) dialog box or **Settings** (**Custom Scan**) dialog box, then click **Document** or **Custom** in the IJ Scan Utility main screen.

(1) Scan Options Area

Apply recommended image correction

Applies suitable corrections automatically based on the item type.

>>> Important

■ The color tone may differ from the source image due to corrections. In that case, deselect the checkbox and scan.

>>> Note

Scanning takes longer than usual when you enable this function.

(2) Save Settings Area

File Name

Enter the file name of the image to be saved. When you save a file, the date and four digits are appended to the set file name in the "_20XX0101_0001" format.

Data Format

Auto is selected. The following data formats are automatically applied according to the item type when saving.

- Photos, postcards, BD/DVD/CD, and business cards: JPEG
- Magazines, newspapers, and documents: PDF

>>> Important

- The save format may differ depending on how you place the item.
- → Placing Items (When Scanning from a Computer)

>>> Note

You can change the data format from Settings....

Settings...

Click to display the **Data Format Settings** dialog box in which you can set the quality of the images to be saved, keyword search of PDF files and their compression type, and the data format in which to save images scanned with Auto Scan.

Save in

Displays the folder in which to save the scanned images. To change the folder, specify the destination folder in the **Select Destination Folder** dialog box displayed by selecting **Add...** from the pull-down menu.

The default save folders are as follows.

Windows 8: **My Documents** folder Windows 7: **My Documents** folder Windows Vista: **Documents** folder Windows XP: **My Documents** folder

>>> Important

When the Settings dialog box is displayed from My Image Garden, this option does not appear.

(3) Application Settings Area

Open with an application

Select this when you want to enhance or correct the scanned images.

You can specify the application from the pull-down menu.

Send to an application

Select this when you want to use the scanned images as they are in an application that allows you to browse or organize images.

You can specify the application from the pull-down menu.

Send to a folder

Select this when you also want to save the scanned images to a folder other than the one specified in **Save in**.

You can specify the folder from the pull-down menu.

Attach to e-mail

Select this when you want to send e-mails with the scanned images attached.

You can specify the e-mail client you want to start from the pull-down menu.

Do not start any application

Saves to the folder specified in Save in.

>>> Note

Specify the application or folder in the Select Application or Select Destination
Folder dialog box displayed by selecting Add... from the pull-down menu.

Instructions

Opens this guide.

Defaults

Settings (Photo Scan) Dialog Box

Click **Photo Scan** on the (Scanning from a Computer) tab to display the **Settings** (**Photo Scan**) dialog box.

In the **Settings (Photo Scan)** dialog box, you can make advanced scan settings to scan items as photos.

- (1) Scan Options Area
- (2) Save Settings Area
- (3) Application Settings Area

>>> Important

■ When the Settings dialog box is displayed from My Image Garden, the setting items for **Application Settings** do not appear.

(1) Scan Options Area

Select Source

Photo is selected.

Color Mode

Select the color mode in which to scan the item.

>>> Important

■ To select Black and White, deselect the Compress scanned images upon transfer checkbox.

Paper Size

Select the size of the item to be scanned.

When you select **Custom**, a screen in which you can specify the paper size appears. Select a **Unit**, then enter the **Width** and **Height**, and then click **OK**.

>>> Note

Click **Defaults** to restore the specified settings to the default settings.

Resolution

Select the resolution of the item to be scanned.

The higher the resolution (value), the more detail in your image.

→ Resolution

· Compress scanned images upon transfer

Compresses scanned images when transferring them to a computer. This is useful when your scanner or printer and computer are connected with a slow interface such as USB1.1 or a network.

Image Processing Settings

Click + (Plus) to set the following.

>>> Important

■ When Color Mode is Black and White, Image Processing Settings is not available.

Sharpen outline

Emphasizes the outline of the subjects to sharpen the image.

(2) Save Settings Area

File Name

Enter the file name of the image to be saved. When you save a file, the date and four digits are appended to the set file name in the "_20XX0101_0001" format.

Data Format

Select the data format in which to save the scanned images.

You can select **JPEG/Exif**, **TIFF**, or **PNG**.

>>> Important

You cannot select JPEG/Exif when Color Mode is Black and White.

Settings...

Click to display the **Data Format Settings** dialog box in which you can set the quality of the images to be saved, keyword search of PDF files and their compression type, and the data format in which to save images scanned with Auto Scan.

Save in

Displays the folder in which to save the scanned images. To change the folder, specify the destination folder in the **Select Destination Folder** dialog box displayed by selecting **Add...** from the pull-down menu.

The default save folders are as follows.

Windows 8: **My Documents** folder Windows 7: **My Documents** folder Windows Vista: **Documents** folder Windows XP: **My Documents** folder

>>> Important

When the Settings dialog box is displayed from My Image Garden, this option does not appear.

· Check scan results

Displays the **Save Settings** dialog box after scanning.

>>> Important

When the Settings dialog box is displayed from My Image Garden, this option does not appear.

(3) Application Settings Area

Open with an application

Select this when you want to enhance or correct the scanned images. You can specify the application from the pull-down menu.

Send to an application

Select this when you want to use the scanned images as they are in an application that allows you to browse or organize images.

You can specify the application from the pull-down menu.

Send to a folder

Select this when you also want to save the scanned images to a folder other than the one specified in **Save in**.

You can specify the folder from the pull-down menu.

· Attach to e-mail

Select this when you want to send e-mails with the scanned images attached. You can specify the e-mail client you want to start from the pull-down menu.

· Do not start any application

Saves to the folder specified in Save in.

>>> Note

Specify the application or folder in the Select Application or Select Destination Folder dialog box displayed by selecting Add... from the pull-down menu.

Instructions

Opens this guide.

Defaults

Settings (Document Scan) Dialog Box

Click **Document Scan** on the (Scanning from a Computer) tab to display the **Settings** (**Document Scan**) dialog box.

In the **Settings (Document Scan)** dialog box, you can make advanced scan settings to scan items as documents.

- (1) Scan Options Area
- (2) Save Settings Area
- (3) Application Settings Area

>>> Important

When the Settings dialog box is displayed from the Scan screen of My Image Garden, the setting items for **Application Settings** do not appear.

(1) Scan Options Area

Select Source

Select the type of item to be scanned.

Scanning documents: **Document** Scanning magazines: **Magazine**

Color Mode

Select the color mode in which to scan the item.

>>> Important

■ To select **Black and White**, deselect the **Compress scanned images upon transfer** checkbox.

Paper Size

Select the size of the item to be scanned.

When you select **Custom**, a screen in which you can specify the paper size appears. Select a **Unit**, then enter the **Width** and **Height**, and then click **OK**.

>>> Note

Click **Defaults** to restore the specified settings to the default settings.

Resolution

Select the resolution of the item to be scanned.

The higher the resolution (value), the more detail in your image.

→ Resolution

>>> Note

Only 300 dpi or 400 dpi can be set when Start OCR is selected in Application Settings.

· Compress scanned images upon transfer

Compresses scanned images when transferring them to a computer. This is useful when your scanner or printer and computer are connected with a slow interface such as USB1.1 or a network.

Image Processing Settings

Click + (Plus) to set the following.

>>> Note

When Color Mode is Black and White, only Reduce gutter shadow, Correct slanted text document, and Detect the orientation of text document and rotate image appear.

Apply Auto Document Fix

Select this checkbox to sharpen text in a document or magazine for better readability.

>>> Important

- Available only when the Compress scanned images upon transfer checkbox is not selected.
- The color tone may differ from the source image due to corrections. In that case, deselect the checkbox and scan.

>>> Note

Scanning takes longer than usual when you enable this function.

Sharpen outline

Emphasizes the outline of the subjects to sharpen the image.

Reduce show-through

Sharpens text in an item or reduces show-through in newspapers, etc.

Reduce moire

Reduces moire patterns.

Printed materials are displayed as a collection of fine dots. "Moire" is a phenomenon where uneven gradation or a stripe pattern appears when such photos or pictures printed with fine dots are scanned.

>>> Note

Scanning takes longer than usual when you enable Reduce moire.

Reduce gutter shadow

Reduces gutter shadows that appear between pages when scanning open booklets.

>>> Important

Available only when the Compress scanned images upon transfer checkbox is not selected.

>>> Note

Use ScanGear (scanner driver)'s Advanced Mode tab to correct gutter shadows when scanning non-standard size items or specified areas.
Refer to "Gutter Shadow Correction" for your model from Home of the Online Manual for details.

Correct slanted text document

Detects the scanned text and corrects the angle (within -0.1 to -10 degrees or +0.1 to +10 degrees) of the document.

>>> Important

- The following types of documents may not be corrected properly since the text cannot be detected correctly.
 - Documents in which the text lines are inclined more than 10 degrees or the angles vary by line
 - Documents containing both vertical and horizontal text
 - Documents with extremely large or small fonts
 - Documents with small amount of text
 - Documents containing figures/images
 - Hand-written text
 - Documents containing both vertical and horizontal lines (tables)

>>> Note

Scanning takes longer than usual when you enable Correct slanted text document.

Detect the orientation of text document and rotate image

Automatically rotates the image to the correct orientation by detecting the orientation of text in the scanned document.

>>> Important

- Only text documents written in languages that can be selected from **Document** Language in the Settings (General Settings) dialog box are supported.
- The orientation may not be detected for the following types of settings or documents since the text cannot be detected correctly.
 - Resolution is outside the range of 300 dpi to 600 dpi
 - Font size is outside the range of 8 points to 48 points
 - Documents containing special fonts, effects, italics, or hand-written text
 - Documents with patterned backgrounds

In that case, select the **Check scan results** checkbox and rotate the image in the **Save Settings** dialog box.

(2) Save Settings Area

File Name

Enter the file name of the image to be saved. When you save a file, the date and four digits are appended to the set file name in the "_20XX0101_0001" format.

Data Format

Select the data format in which to save the scanned images.

You can select JPEG/Exif, TIFF, PNG, PDF, or PDF (Multiple Pages).

>>> Important

- You cannot select JPEG/Exif when Color Mode is Black and White.
- When Start OCR is selected in Application Settings, you cannot select PDF or PDF (Multiple Pages).

Settings...

Click to display the **Data Format Settings** dialog box in which you can set the quality of the images to be saved, keyword search of PDF files and their compression type, and the data format in which to save images scanned with Auto Scan.

Save in

Displays the folder in which to save the scanned images. To change the folder, specify the destination folder in the **Select Destination Folder** dialog box displayed by selecting **Add...** from the pull-down menu.

The default save folders are as follows.

Windows 8: **My Documents** folder Windows 7: **My Documents** folder Windows Vista: **Documents** folder Windows XP: **My Documents** folder

>>> Important

When the Settings dialog box is displayed from My Image Garden, this option does not appear.

· Check scan results

Displays the **Save Settings** dialog box after scanning.

>>> Important

When the Settings dialog box is displayed from My Image Garden, this option does not appear.

(3) Application Settings Area

Open with an application

Select this when you want to enhance or correct the scanned images.

You can specify the application from the pull-down menu.

Send to an application

Select this when you want to use the scanned images as they are in an application that allows you to browse or organize images.

You can specify the application from the pull-down menu.

Send to a folder

Select this when you also want to save the scanned images to a folder other than the one specified in **Save in**.

You can specify the folder from the pull-down menu.

Attach to e-mail

Select this when you want to send e-mails with the scanned images attached. You can specify the e-mail client you want to start from the pull-down menu.

Start OCR

Select this when you want to convert text in the image into text data using specified OCR software.

You can specify the application from the pull-down menu.

· Do not start any application

Saves to the folder specified in Save in.

>>> Note

Specify the application or folder in the Select Application or Select Destination Folder dialog box displayed by selecting Add... from the pull-down menu.

Instructions

Opens this guide.

Defaults

Settings (Custom Scan) Dialog Box

Click **Custom Scan** on the (Scanning from a Computer) tab to display the **Settings** (**Custom Scan**) dialog box.

In the **Settings (Custom Scan)** dialog box, you can make advanced scan settings to scan according to your preference.

- (1) Scan Options Area
- (2) Save Settings Area
- (3) Application Settings Area

>>> Important

■ When the Settings dialog box is displayed from the Scan screen of My Image Garden, the setting items for **Application Settings** do not appear.

(1) Scan Options Area

Select Source

Select the type of item to be scanned. When **Auto** is selected, the item type is automatically detected.

Color Mode, Paper Size, and Resolution are automatically set as well.

>>> Important

- Item types supported by **Auto** are photos, postcards, business cards, magazines, newspapers, documents, and BD/DVD/CD.
- To scan the following types of items, specify the item type or size. You cannot scan correctly with **Auto**.
 - A4 size photos
 - Text documents smaller than 2L (5 inches x 7 inches) (127 mm x 178 mm), such as paperback pages with the spine cut off
 - Items printed on thin white paper
 - Long narrow items such as panoramic photos
- Reflective disc labels may not be scanned as expected.
- Place items correctly according to the type of item to be scanned. Otherwise, items may not be scanned correctly.

Refer to "Placing Items (When Scanning from a Computer)" for how to place items.

>>> Note

- To convert text in the image into text data after scanning, specify **Select Source** instead of selecting **Auto**.
- To reduce moire, set Select Source to Magazine.

Color Mode

Select the color mode in which to scan the item.

Important

To select Black and White, deselect the Compress scanned images upon transfer checkbox.

>>> Note

Only Color is available when Select Source is Auto.

Paper Size

Select the size of the item to be scanned.

When you select **Custom**, a screen in which you can specify the paper size appears. Select a **Unit**, then enter the **Width** and **Height**, and then click **OK**.

>>> Note

- Only Auto is available when Select Source is Auto.
- Click **Defaults** in the screen in which you can specify the paper size to restore the specified settings to the default settings.

Resolution

Select the resolution of the item to be scanned.

The higher the resolution (value), the more detail in your image.

→ Resolution

>>> Note

- Only Auto is available when Select Source is Auto.
- Only 300 dpi or 400 dpi can be set when Start OCR is selected in Application Settings.

Compress scanned images upon transfer

Compresses scanned images when transferring them to a computer. This is useful when your scanner or printer and computer are connected with a slow interface such as USB1.1 or a network.

>>> Important

■ This does not appear when **Select Source** is **Auto**.

Image Processing Settings

Click (Plus) to set the following. Available setting items vary by **Select Source**.

When Select Source is Auto

Apply recommended image correction

Applies suitable corrections automatically based on the item type.

>>> Important

The color tone may differ from the source image due to corrections. In that case, deselect the checkbox and scan.

>>> Note

Scanning takes longer than usual when you enable this function.

When Select Source is Photo

>>> Important

When Color Mode is Black and White, Image Processing Settings is not available.

Sharpen outline

Emphasizes the outline of the subjects to sharpen the image.

When Select Source is Magazine or Document

>>> Note

When Color Mode is Black and White, only Reduce gutter shadow, Correct slanted text document, and Detect the orientation of text document and rotate image appear.

Apply Auto Document Fix

Select this checkbox to sharpen text in a document or magazine for better readability.

>>> Important

- Available only when the Compress scanned images upon transfer checkbox is not selected.
- The color tone may differ from the source image due to corrections. In that case, deselect the checkbox and scan.

>>> Note

Scanning takes longer than usual when you enable this function.

Sharpen outline

Emphasizes the outline of the subjects to sharpen the image.

Reduce show-through

Sharpens text in an item or reduces show-through in newspapers, etc.

Reduce moire

Reduces moire patterns.

Printed materials are displayed as a collection of fine dots. "Moire" is a phenomenon where uneven gradation or a stripe pattern appears when such photos or pictures printed with fine dots are scanned.

>>> Note

Scanning takes longer than usual when you enable Reduce moire.

Reduce gutter shadow

Reduces gutter shadows that appear between pages when scanning open booklets.

>>> Important

Available only when the Compress scanned images upon transfer checkbox is not selected.

>>> Note

Use ScanGear (scanner driver)'s Advanced Mode tab to correct gutter shadows when scanning non-standard size items or specified areas.
Refer to "Gutter Shadow Correction" for your model from Home of the Online Manual for details.

Correct slanted text document

Detects the scanned text and corrects the angle (within -0.1 to -10 degrees or +0.1 to +10 degrees) of the document.

>>> Important

- The following types of documents may not be corrected properly since the text cannot be detected correctly.
 - Documents in which the text lines are inclined more than 10 degrees or the angles vary by line
 - Documents containing both vertical and horizontal text
 - Documents with extremely large or small fonts
 - Documents with small amount of text
 - Documents containing figures/images
 - Hand-written text
 - Documents containing both vertical and horizontal lines (tables)

>>> Note

Scanning takes longer than usual when you enable Correct slanted text document.

Detect the orientation of text document and rotate image

Automatically rotates the image to the correct orientation by detecting the orientation of text in the scanned document.

>>> Important

- Only text documents written in languages that can be selected from **Document** Language in the Settings (General Settings) dialog box are supported.
- The orientation may not be detected for the following types of settings or documents since the text cannot be detected correctly.
 - Resolution is outside the range of 300 dpi to 600 dpi
 - Font size is outside the range of 8 points to 48 points
 - Documents containing special fonts, effects, italics, or hand-written text
 - Documents with patterned backgrounds

In that case, select the **Check scan results** checkbox and rotate the image in the **Save Settings** dialog box.

(2) Save Settings Area

File Name

Enter the file name of the image to be saved. When you save a file, the date and four digits are appended to the set file name in the " 20XX0101 0001" format.

Data Format

Select the data format in which to save the scanned images.

You can select JPEG/Exif, TIFF, PNG, PDF, PDF (Multiple Pages), or Auto.

>>> Important

- When **Auto** is selected, the save format may differ depending on how you place the item.
- → Placing Items (When Scanning from a Computer)
- You cannot select JPEG/Exif when Color Mode is Black and White.
- When **Start OCR** is selected in **Application Settings**, you cannot select **PDF**, **PDF** (Multiple Pages), or Auto.

>>> Note

Auto appears only when Auto is selected for Select Source.

Settings...

Click to display the **Data Format Settings** dialog box in which you can set the quality of the images to be saved, keyword search of PDF files and their compression type, and the data format in which to save images scanned with Auto Scan.

Save in

Displays the folder in which to save the scanned images. To change the folder, specify the destination folder in the **Select Destination Folder** dialog box displayed by selecting **Add...** from the pull-down menu.

The default save folders are as follows.

Windows 8: **My Documents** folder Windows 7: **My Documents** folder Windows Vista: **Documents** folder Windows XP: **My Documents** folder

>>> Important

When the Settings dialog box is displayed from My Image Garden, this option does not appear.

Check scan results

Displays the **Save Settings** dialog box after scanning.

>>> Important

- This does not appear when Select Source is Auto.
- When the Settings dialog box is displayed from My Image Garden, this option does not appear.

(3) Application Settings Area

Open with an application

Select this when you want to enhance or correct the scanned images.

You can specify the application from the pull-down menu.

Send to an application

Select this when you want to use the scanned images as they are in an application that allows you to browse or organize images.

You can specify the application from the pull-down menu.

· Send to a folder

Select this when you also want to save the scanned images to a folder other than the one specified in **Save in**.

You can specify the folder from the pull-down menu.

Attach to e-mail

Select this when you want to send e-mails with the scanned images attached.

You can specify the e-mail client you want to start from the pull-down menu.

Start OCR

Select this when you want to convert text in the image into text data using specified OCR software.

You can specify the application from the pull-down menu.

Do not start any application

Saves to the folder specified in Save in.

>>> Note

Specify the application or folder in the Select Application or Select Destination
Folder dialog box displayed by selecting Add... from the pull-down menu.

Instructions

Instructions

Opens this guide.

Defaults

Settings (General Settings) Dialog Box

Click the (General Settings) tab to display the **Settings** (General Settings) dialog box.

In the **Settings (General Settings)** dialog box, you can set the product to use, file size restriction on e-mail attachment, language to detect text in images, and folder in which to save images temporarily.

Product Name

Displays the name of the product that IJ Scan Utility is currently set to use. If the displayed product is not the one you want to use, select the desired product from the list.

In addition, for network connection, select one with "Network" after the product name.

>>> Note

■ With network connection, **Select** appears on the right side of the product name. Click **Select** to display IJ Network Scanner Selector EX from which you can change the scanner to use. Refer to "Network Scan Settings" for the setting procedure.

E-mail Attachment Size

You can restrict the size of scanned images to be attached to an e-mail.

You can select Small (Suitable for 640 x 480 Windows), Medium (Suitable for 800 x 600 Windows), Large (Suitable for 1024 x 768 Windows), or No Change.

>>> Important

■ When the Settings dialog box is displayed from My Image Garden, this option does not appear.

Document Language

Select the language for detecting text in images.

• Folder to Save Temporary Files

Displays the folder in which to save images temporarily. Click **Browse...** to specify the destination folder.

Instructions

Opens this guide.

Defaults

Data Format Settings Dialog Box

Display the **Data Format Settings** dialog box by one of the following operations.

- Click Settings... of Save Settings on each tab of the Settings dialog box
- Click Settings... of Save Settings in the Save Settings dialog box that appears after scanning with the Check scan results checkbox selected in the Settings dialog box

In the **Data Format Settings** dialog box, you can set the quality of the images to be saved, keyword search of PDF files and their compression type, and the data format in which to save images scanned with Auto Scan.

JPEG Image Quality

You can specify the image quality of JPEG files.

>>> Important

Available only when the Compress scanned images upon transfer checkbox is not selected in Scan Options of the Settings dialog box.

Create a PDF file that supports keyword search

Select this checkbox to convert text in images into text data and create PDF files that support keyword search.

>>> Note

■ PDF files that are searchable in the language selected in **Document Language** on the ■ (General Settings) tab of the Settings dialog box are created.

PDF Compression

Select the compression type for saving PDF files.

Standard

It is recommended that you normally select this setting.

High

Compresses the file size when saving, allowing you to reduce the load on your network/server.

>>> Note

Format for Item Detected as Document in Auto Scan

You can specify the data format for automatically saving items detected as documents in Auto Scan.

Format for Item Detected as Photo in Auto Scan

You can specify the data format for automatically saving items detected as photos in Auto Scan.

Defaults

Save Settings Dialog Box

Select the **Check scan results** checkbox in **Save Settings** of the Settings dialog box to display the **Save Settings** dialog box after scanning.

You can specify the data format and destination while viewing the thumbnails of scan results.

>>> Important

After scanning from My Image Garden, the Save Settings dialog box does not appear.

- (1) Preview Operation Buttons
- (2) Scan Results Area
- (3) Save Settings Area

(1) Preview Operation Buttons

• (Rotate Left 90°)/(Rotate Right 90°)

Rotates scanned images 90 degrees counter-clockwise or clockwise.

Select the image you want to rotate, then click (Rotate Left 90°) or (Rotate Right 90°).

>>> Important

The preview operation buttons do not appear when the Enable large image scans checkbox is selected in the Settings (ScanGear) dialog box.

(2) Scan Results Area

Displays the thumbnails of the scanned images. You can change the save order of images via drag-and-drop. The file names for saving appear below the thumbnails.

(3) Save Settings Area

File Name

Enter the file name of the image to be saved. When you save a file, the date and four digits are appended to the set file name in the "_20XX0101_0001" format.

Data Format

Select the data format in which to save the scanned images.

You can select JPEG/Exif, TIFF, PNG, PDF, or PDF (Multiple Pages).

>>> Important

- You cannot select PDF or PDF (Multiple Pages) in the following cases.
 - When scanned by clicking Photo in the IJ Scan Utility main screen
 - The Enable large image scans checkbox is selected in Save Settings of the Settings (ScanGear) dialog box
 - Start OCR is selected in Application Settings of the Settings (Document Scan), Settings (Custom Scan), or Settings (ScanGear) dialog box
- You cannot select JPEG/Exif when Color Mode is Black and White.

Settings...

Click to display the **Data Format Settings** dialog box in which you can set the quality of the images to be saved, keyword search of PDF files and their compression type, and the data format in which to save images scanned with Auto Scan.

Save in

Displays the folder in which to save the scanned images. To change the folder, specify the destination folder in the **Select Destination Folder** dialog box displayed by selecting **Add...** from the pull-down menu.

The default save folders are as follows.

Windows 8: **My Documents** folder Windows 7: **My Documents** folder Windows Vista: **Documents** folder Windows XP: **My Documents** folder

Image Stitch Window

Click Stitch in the IJ Scan Utility main screen to display the Image Stitch window.

You can scan the left and right halves of an item larger than the platen and combine the images back into one image. You can scan items up to approximately twice as large as the platen.

- (1) Settings and Operation Buttons
- (2) Toolbar
- (3) Thumbnail View Area
- (4) Preview Area

>>> Note

The displayed items vary depending on the select source and view.

(1) Settings and Operation Buttons

- Select Output Size
 - B4 (B5 x 2)

Scans the left and right halves of a B4 size item separately.

• A3 (A4 x 2)

Scans the left and right halves of an A3 size item separately.

• 11 x 17 (Letter x 2)

Scans the left and right halves of an item twice as large as Letter size separately.

• Full Platen x 2

Scans the left and right halves of an item twice as large as the platen separately.

Scan Direction

· Scan from Left

Displays the first scanned image on the left side.

Scan from Right

Displays the first scanned image on the right side.

Scan Image 1

Start Scanning Image 1

Scans the first item.

Scan Image 2

• Start Scanning Image 2

Scans the second item.

Adjust cropping frames

You can adjust the scan area in preview.

If no area is specified, the image of the size selected in **Select Output Size** will be saved. If an area is specified, only the image in the cropping frame will be scanned and saved.

→ Adjusting Cropping Frames in the Image Stitch Window

Save

Save

Saves the two scanned images as one image.

Cancel

Cancels Stitch scan.

(2) Toolbar

Toolbar

You can delete the scanned images or adjust the previewed images.

· X (Delete)

Deletes the scanned image.

• (Enlarge/Reduce)

Allows you to enlarge or reduce the preview image.

Left-clicking the Preview area enlarges the displayed image.

Right-clicking the Preview area reduces the displayed image.

• (Rotate Left)

Rotates the preview image 90 degrees counter-clockwise.

• Invert Vertically)

Rotates the preview image 180 degrees.

• (Rotate Right)

Rotates the preview image 90 degrees clockwise.

• (Open Guide)

Opens this page.

(3) Thumbnail View Area

Thumbnail View Area

Displays the thumbnails of the scanned images. Appears blank if none has been scanned.

(4) Preview Area

Preview Area

Displays the scanned images. You can adjust the layout by dragging the scanned image or check the results of the settings made in "(1) Settings and Operation Buttons."

When no image has been scanned

After scanning the first item by clicking Start Scanning Image 1

The image is scanned in the direction specified in **Scan Direction**, and **2** appears next to it.

• After scanning the second item by clicking Start Scanning Image 2

The two scanned images appear.

What Is ScanGear (Scanner Driver)?

ScanGear (scanner driver) is software required for scanning documents. It enables you to specify the output size and make image corrections when scanning.

ScanGear can be started from My Image Garden or IJ Scan Utility. It can be also started from other applications that are compatible with a standard interface called TWAIN. (ScanGear is a TWAIN-compatible driver.)

What You Can Do with This Software

This software enables you to preview scan results or set document type and output size, etc. when scanning documents. It is useful when you want to scan in a specific color tone, as it allows you to make various corrections and adjust brightness, contrast, etc.

Screens

There are two modes: Basic Mode and Advanced Mode.

Switch modes by clicking a tab on the upper right of the screen.

>>> Note

- ScanGear starts in the last used mode.
- Settings are not retained when you switch modes.

Basic Mode

Use the **Basic Mode** tab to scan easily by following three simple on-screen steps (10, 22, and 3).

Advanced Mode

Use the **Advanced Mode** tab to specify the color mode, output resolution, image brightness, color tone, etc. when scanning.

Scanning with Advanced Settings Using ScanGear (Scanner Driver)

- Starting ScanGear (scanner driver)
 - ⇒ Starting ScanGear (Scanner Driver)
- Scanning documents after making simple image corrections
 - ⇒Scanning in Basic Mode
- Scanning documents after making advanced image corrections and brightness/ color adjustments
 - → Scanning in Advanced Mode
- Scanning multiple documents at one time after making image corrections and color adjustments
 - ⇒ Scanning Multiple Documents at One Time with ScanGear (Scanner Driver)

Starting ScanGear (Scanner Driver)

Use ScanGear (scanner driver) to make image corrections and color adjustments when scanning. ScanGear can be started from My Image Garden or an application.

Starting from My Image Garden

Follow these steps to start ScanGear from My Image Garden.

1. Start My Image Garden.

For how to start My Image Garden, refer to My Image Garden Guide.

2. Click the driver icon in the Scan screen of My Image Garden.

The ScanGear screen appears.

Starting from an Application

Follow these steps (example) to start ScanGear from an application.

The procedure varies depending on the application. For details, refer to the application's manual.

- 1. Start the application.
- 2. On the menu of the application, select the machine.
- **3.** Select the command to scan a document.

The ScanGear screen appears.

Scanning in Basic Mode

Use the **Basic Mode** tab to scan easily by following the on-screen steps.

Refer to "Scanning Multiple Documents at One Time with ScanGear (Scanner Driver)" to scan multiple documents at one time.

- Thin documents
- Thick documents
- The following types of documents may not be scanned correctly.
 - Documents smaller than 1.2 inches (3 cm) square
 - Photos that have been cut to various shapes
- 1. Place the document on the Platen, then start ScanGear (scanner driver).
 - ⇒ Placing Items (When Scanning from a Computer)
 - → Starting ScanGear (Scanner Driver)
- Set Select Source according to the document placed on the Platen or ADF.

>>> Note

■ To scan magazines containing many color photos, select Magazine (Color).

3. Click Preview.

Preview image appears in the Preview area.

>>> Note

Colors are adjusted based on the document type selected in Select Source.

4. Set Destination.

5. Set **Output Size** according to purpose.

Output size options vary by the item selected in **Destination**.

- 6. Adjust the cropping frames (scan areas) as required.
 - Adjust the size and position of the cropping frames on the preview image.
 - →Adjusting Cropping Frames (ScanGear)
- 7. Set Image corrections as required.
- 8. Click Scan.

Scanning starts.

- Click (Information) to open a dialog box in which you can check the current scan settings (document type, etc.).
- A response of ScanGear after scanning can be specified in Status of ScanGear dialog after scanning on the Scan tab of the Preferences dialog box.

Advanced Mode Tab

Scanning Multiple Documents at One Time with ScanGear (Scanner Driver)

You can scan two or more photos (small documents) on the Platen at one time on the **Basic Mode** tab and **Advanced Mode** tab.

This section explains how to scan multiple documents from the **Basic Mode** tab.

Important

- To scan multiple documents as a single image, scan in whole image view.
- The following types of documents may not be cropped correctly. In that case, adjust the cropping frames (scan areas) in whole image view and scan.
 - Photos that have a whitish background
 - Documents printed on white paper, hand-written text, business cards, etc.
 - Thin documents
 - Thick documents
- ⇒ Scanning Multiple Documents in Whole Image View
- The following types of documents may not be scanned correctly.
 - Documents smaller than 1.2 inches (3 cm) square
 - Photos that have been cut to various shapes

- You can also scan multiple documents at one time from the **Advanced Mode** tab. Use the **Advanced Mode** tab to make advanced scan settings such as the color mode, output resolution, image brightness, and color tone.
- Refer to the corresponding sections below for details on the **Basic Mode** tab and **Advanced Mode** tab.
- → Basic Mode Tab
- →Advanced Mode Tab
- Place the document on the Platen, then start ScanGear (scanner driver).
 - →Placing Items (When Scanning from a Computer)
 - → Starting ScanGear (Scanner Driver)
- 2. Set **Select Source** according to the document placed on the Platen.

3. Click Preview.

Thumbnails of the preview images appear in the Preview area. Cropping frames are specified automatically according to the document size.

- 4. Set Destination.
- **5.** Set **Output Size** according to purpose.
- **6.** Adjust the cropping frames and set **Image corrections** as required.

- You can correct each image separately. Select the frame you want to correct.
- In thumbnail view, you can only create one cropping frame per image. To create multiple cropping frames in an image, scan in whole image view.

- ⇒ Scanning Multiple Documents in Whole Image View
- Select the images you want to scan.Select the checkboxes of the images you want to scan.
- 8. Click Scan.

Scanning Multiple Documents in Whole Image View

Follow these steps if thumbnails are not displayed correctly when previewed or if you want to scan multiple documents as a single image.

>>> Note

- Positions of slanted documents are not corrected in whole image view.
- After previewing images, click (Thumbnail) on the Toolbar.
 Switch to whole image view.

- When the whole image is displayed, the icon changes to (Whole Image).
- 2. Set Destination.

3. Set Output Size according to purpose.

Invert aspect ratio will be enabled when **Output Size** is set to anything but **Flexible**. Click this button to rotate the cropping frame. Click again to return it to the original orientation.

4. Adjust the cropping frames.

Adjust the size and position of the cropping frames on the preview image. You can also create two or more cropping frames.

If an area is not specified, the document will be scanned at the document size (Auto Crop). If an area is specified, only the portion in the specified area will be scanned.

- →Adjusting Cropping Frames (ScanGear)
- **5.** Set **Image corrections** as required.
- 6. Click Scan.

Areas framed by broken lines are scanned.

>>> Note

A response of ScanGear after scanning can be specified in Status of ScanGear dialog after scanning on the Scan tab of the Preferences dialog box.

Correcting Images and Adjusting Colors with ScanGear (Scanner Driver)

- Sharpening out-of-focus photos, reducing dust and scratches, and correcting faded colors
 - → Correcting Images (Unsharp Mask, Reduce Dust and Scratches, Fading Correction, etc.)
- Previewing and changing the color tone of the entire image to scan
 - →Adjusting Colors Using a Color Pattern
- Brightening colors that have faded with time or due to colorcast
 - →Adjusting Saturation and Color Balance
- Adjusting images that are too dark or bright, or too flat due to lack of contrast
 - →Adjusting Brightness and Contrast
- Adjusting the color tone using histogram (a graph showing brightness distribution)
 - →Adjusting Histogram
- Adjusting the image brightness using tone curve (a graph of brightness balance)
 - →Adjusting Tone Curve
- Sharpening characters in text documents or reducing show-through effects
 - **⇒** Setting Threshold

Correcting Images (Unsharp Mask, Reduce Dust and Scratches, Fading Correction, etc.)

The **Image Settings** functions on the **Advanced Mode** tab of ScanGear (scanner driver) allow you to enhance the outline of the subjects, reduce dust/scratches, and correct faded colors when scanning images.

Setting Items

Click (Arrow) of a function and select an item from the pull-down menu.

>>> Important

- Do not apply these functions to images without moire, dust/scratches, or faded colors.
 The color tone may be adversely affected.
- Refer to "Image Settings" for details and precautions on each function.

>>> Note

Refer to "Scanning in Advanced Mode" to start the Advanced Mode tab of ScanGear and scan.

Adjusting the image brightness and color tone

Set **Image Adjustment** to **Auto**, **Photo**, **Magazine**, or **Document** according to the document type.

Reducing show-through in text documents or lightening the base color in recycled paper, newspapers, etc. when scanning documents

Set Reduce Show-through to ON.

Sharpening slightly out-of-focus images

Set Unsharp Mask to ON.

Reducing gradations and stripe patterns

Set Descreen to ON.

OFF ON

>>> Note

■ Printed photos and pictures are displayed as a collection of fine dots. "Moire" is a phenomenon where uneven gradation or a stripe pattern appears when such photos or pictures printed with fine dots are scanned. **Descreen** is the function for reducing this moire effect.

Reducing dust and scratches

Set **Reduce Dust and Scratches** to **Low**, **Medium**, or **High** according to the degree of dust and scratches.

Correcting photos that have faded with time or due to colorcast

Set **Fading Correction** to **Low**, **Medium**, or **High** according to the degree of fading or colorcast.

Reducing graininess

Set Grain Correction to Low, Medium, or High according to the degree of graininess.

None	Medium
------	--------

Correcting shadows that appear between pages when scanning open booklets

Set Gutter Shadow Correction to Low, Medium, or High according to the degree of shadows.

None	Medium

Adjusting Colors Using a Color Pattern

You can preview color changes and reproduce natural colors by using the color pattern function in ScanGear (scanner driver)'s **Basic Mode** tab.

Color Adjustment

Correct colors that have faded with time or due to colorcast. "Colorcast" is a phenomenon where a specific color affects the entire picture due to the weather or ambient strong colors.

Cancel

Click an arrow in **Color Adjustment** to emphasize the corresponding color.

Cyan & red, magenta & green, and yellow & blue are complementary color pairs (each pair produces a shade of gray when mixed). You can reproduce the natural colors of the scene by reducing the cast color and increasing the complementary color.

It is recommended that you find a portion in the image where it should be white, and adjust the colors so that the portion turns white.

Preview image appears in the center. Preview image colors change as you adjust them.

Below is an example of correcting a bluish image.

Since Blue and Green are too strong, click the Yellow and Magenta arrows to correct.

- Color adjustments are applied only to the cropping frames (scan areas) or the frame selected in thumbnail view.
- You can select multiple frames or cropping frames by clicking them while pressing the Ctrl key.
- You can also select a color tone from the color pattern displayed on the left of the Color Pattern screen.
- You can also use this function to add a specific tint to an image. Increase the magenta to add a warm tint, and increase the blue to add a cool tint.

Adjusting Saturation and Color Balance

In ScanGear (scanner driver)'s **Advanced Mode** tab, click (Saturation/Color Balance).

>>> Note

Click Defaults to reset all adjustments in the current window.

Saturation

Adjust the image's saturation (vividness). You can brighten colors that have faded with time, etc.

Move (Slider) under **Saturation** to the left to decrease the saturation (darken the image), and to the right to increase the saturation (brighten the image). You can also enter a value (-127 to 127).

>>> Note

The natural color tone of the original image may be lost if you increase saturation too much.

Color Balance

Adjust images that have a colorcast. "Colorcast" is a phenomenon where a specific color affects the entire picture due to the weather or ambient strong colors.

Move (Slider) under **Color Balance** to the left or right to emphasize the corresponding color.

Cyan & Red

Magenta & Green

Yellow & Blue

These are complementary color pairs (each pair produces a shade of gray when mixed). You can reproduce the natural colors of the scene by reducing the cast color and increasing the complementary color.

It is usually difficult to correct the image completely by adjusting only one color pair. It is recommended that you find a portion in the image where it should be white, and adjust all three color pairs so that the portion turns white.

You can also enter a value (-127 to 127).

Below is an example of an image in which the "Cyan & Red" pair has been adjusted.

Adjusting Brightness and Contrast

In ScanGear (scanner driver)'s **Advanced Mode** tab, click (Brightness/Contrast).

>>> Note

- Click (Down arrow) to switch to detailed view. Click (Up arrow) to return to the previous view.
- Click **Defaults** to reset all adjustments in the current window.

Channel

Each dot of an image is a mixture of Red, Green, and Blue in various proportions (gradation). These colors can be adjusted individually as a "channel."

Master

Adjust the Red, Green, and Blue combined.

Red

Adjust the Red channel.

Green

Adjust the Green channel.

Blue

Adjust the Blue channel.

>>> Note

Only Grayscale will be displayed in Channel when Color Mode is Grayscale.

Brightness

Adjust the image brightness. Move (Slider) under **Brightness** to the left to darken and right to brighten the image. You can also enter a value (-127 to 127).

>>> Note

Highlights may be lost if you brighten the image too much, and shadows may be lost if you darken the image too much.

Contrast

"Contrast" is the degree of difference between the brighter and darker parts of an image. Increasing contrast will increase the difference, thus sharpening the image. Decreasing contrast will decrease the difference, thus softening the image.

Move (Slider) under **Contrast** to the left to decrease and right to increase the contrast of the image. You can also enter a value (-127 to 127).

>>> Note

• Increasing the contrast is effective in adding a three-dimensional feel to soft images.
However, shadows and highlights may be lost if you increase the contrast too much.

Adjusting Histogram

In ScanGear (scanner driver)'s **Advanced Mode** tab, click (Histogram).

>>> Note

Click **Defaults** to reset all adjustments in the current window.

Channel

Each dot of an image is a mixture of Red, Green, and Blue in various proportions (gradation). These colors can be adjusted individually as a "channel."

Master

Adjust the Red, Green, and Blue combined.

Red

Adjust the Red channel.

Green

Adjust the Green channel.

Blue

Adjust the Blue channel.

>>> Note

Only Grayscale will be displayed in Channel when Color Mode is Grayscale.

Reading Histograms

You can see the histogram of a specified area for each **Channel**. The higher the histogram peak, the more data is distributed to that level.

(1) Bright area	(2) Dark area	(3) Whole image
More data is distributed to the highlight side.	More data is distributed to the shadow side.	Data is widely distributed between the highlight and shadow.

Adjusting Histograms (Using the Slider)

Select a **Channel**, then move **(Black-point Slider)** or **(White-point Slider)** to specify the level to be set as the shadow or highlight.

- All parts to the left of (Black-point Slider) will be black (level 0).
- The parts at (Mid-point Slider) will turn to the color exactly between the black-point and white-point.
- All parts to the right of \triangle (White-point Slider) will turn white (level 255). When **Image Adjustment** is set to anything but **None**, the adjustments shown below are performed automatically.

Moving the Black-point and White-point Sliders

Move the Black-point Slider or White-point Slider to adjust brightness.

Images with more data distributed to the highlight side

Move the Black-point Slider toward the highlight side.

Images with more data distributed to the shadow side

Move the White-point Slider toward the shadow side.

Images with widely distributed data

Move the Black-point Slider toward the highlight side, and White-point Slider toward the shadow side.

Moving the Mid-point Slider

Move the Mid-point Slider to specify the level to be set as the middle of the tonal range.

Images with more data distributed to the highlight side

Move the Mid-point Slider toward the highlight side.

Images with more data distributed to the shadow side

Move the Mid-point Slider toward the shadow side.

Adjusting Histograms (Using the Droppers)

When you select a **Channel** and click the Black-point, Mid-point, or White-point Dropper, the mouse pointer on the preview image changes to a dropper. Click a Dropper displayed below the histogram to change the setting.

- The point clicked with (Black-point Dropper) will be the darkest point. You can also enter a value (0 to 245).
- The point clicked with (Mid-point Dropper) will be the middle of the tonal range. You can also enter a value (5 to 250).
- The point clicked with (White-point Dropper) will be the brightest point. You can also enter a value (10 to 255).
- Click (Dropper) for **Gray Balance** and click the area you want to adjust the color in the preview image.

The clicked point will be set as the achromatic color reference, and the rest of the image is adjusted accordingly. For instance, if snow in a photo appears bluish, click the bluish part to adjust the whole image and reproduce natural colors.

Adjusting Tone Curve

In ScanGear (scanner driver)'s **Advanced Mode** tab, click (Tone Curve Settings).

>>> Note

Click **Defaults** to reset all adjustments in the current window.

Channel

Each dot of an image is a mixture of Red, Green, and Blue in various proportions (gradation). These colors can be adjusted individually as a "channel."

Master

Adjust the Red, Green, and Blue combined.

Red

Adjust the Red channel.

Green

Adjust the Green channel.

Blue

Adjust the Blue channel.

>>> Note

Only Grayscale will be displayed in Channel when Color Mode is Grayscale.

Reading Tone Curves

With ScanGear, scanning images via a scanner is the input, and displaying to a monitor is the output. "Tone Curve" shows the balance of tone input and output for each **Channel**.

Adjusting Tone Curve

In Select Tone Curve, select a tone curve from No correction, Overexposure, Underexposure, High contrast, Reverse the negative/positive image, and Edit custom curve.

No correction (No adjustment)

Overexposure (Convex curve)

The midtone data of the input side is stretched toward the highlight of the output side, resulting in a bright-toned image when viewed on a monitor.

Underexposure (Concave curve)

The midtone data of the input side is stretched toward the shadow of the output side, resulting in a dark-toned image when viewed on a monitor.

High contrast (S curve)

The highlight and shadow of the input side are enhanced, resulting in a high-contrast image.

Reverse the negative/positive image (Downward-sloping line)

The input and output sides are reversed, resulting in a negative-positive inverted image.

Edit custom curve

You can drag specific points on the Tone Curve to freely adjust the brightness of the corresponding areas.

Setting Threshold

The brightness of color and grayscale images is expressed in a value between 0 and 255. However, in creating black and white images, all colors are mapped to either black (0) or white (255). "Threshold" is the borderline value that determines a color as black or white. By adjusting the threshold level, you can sharpen text in a document or reduce show-through in newspapers.

This function is available when Color Mode is Black and White.

In ScanGear (scanner driver)'s **Advanced Mode** tab, click (Threshold)

>>> Note

Click **Defaults** to reset all adjustments in the current window.

Adjusting Threshold

Move (Slider) to the right to increase the threshold value and thus increase the black areas. Move the slider to the left to decrease the value and thus increase the white areas. You can also enter a value (0 to 255).

ScanGear (Scanner Driver) Screens

- Basic Mode Tab
- Advanced Mode Tab
 - Input Settings
 - Output Settings
 - Image Settings
 - Color Adjustment Buttons
- Preferences Dialog Box
 - Scanner Tab
 - Preview Tab
 - Scan Tab
 - Color Settings Tab

Basic Mode Tab

This mode allows you to scan easily by following the on-screen steps.

This section describes the settings and functions available on the Basic Mode tab.

- (1) Settings and Operation Buttons
- (2) Toolbar
- (3) Preview Area

>>> Note

The displayed items vary by document type and view.

(1) Settings and Operation Buttons

- Select Source
 - Photo (Color)

Scan color photos.

Magazine (Color)

Scan color magazines.

Document (Color)

Scan documents in color.

Document (Grayscale)

Scan documents in black and white.

>>> Note

- When you select a document type, the unsharp mask function will be active. The image adjustment function which adjusts images based on the document type will also be active.
- If you select Magazine (Color), the descreen function will be active.

Display Preview Image

Preview

Performs a trial scan.

>>> Note

When using the machine for the first time, scanner calibration starts automatically.Wait a while until the preview image appears.

Destination

Select what you want to do with the scanned image.

Print

Select this to print the scanned image on a printer.

Image display

Select this to view the scanned image on a monitor.

OCR

Select this to use the scanned image with OCR software.

"OCR software" is software that converts text scanned as an image into text data that can be edited in word processors and other programs.

Output Size

Select an output size.

Output size options vary by the item selected in **Destination**.

Flexible

Allows you to freely adjust the cropping frames (scan areas).

In thumbnail view

Drag the mouse over a thumbnail to display a cropping frame. When a cropping frame is displayed, the portion within the cropping frame will be scanned. When no cropping frame is displayed, each frame is scanned individually.

In whole image view

When no cropping frame is displayed, the entire Preview area will be scanned. When a cropping frame is displayed, the portion within the cropping frame will be scanned.

Paper Size (L, A4, etc.)

Select an output paper size. The portion within the cropping frame will be scanned at the size of the selected paper size. You can drag the cropping frame to enlarge/reduce it while maintaining the aspect ratio.

Monitor Size (1024 x 768 pixels, etc.)

Select an output size in pixels. A cropping frame of the selected monitor size will be displayed and the portion within the cropping frame will be scanned. You can drag the cropping frame to enlarge/reduce it while maintaining the aspect ratio.

· Add/Delete...

Opens the **Add/Delete the Output Size** dialog box, in which you can specify custom output sizes. You can select this option when **Destination** is **Print** or **Image display**.

In the **Add/Delete the Output Size** dialog box, you can specify multiple output sizes and save them at one time. Saved items will be registered to the **Output Size** list and can be selected, along with the predefined items.

Add

To add a size, enter **Output Size Name**, **Width**, and **Height**, then click **Add**. For **Unit**, you can select **inches** or **mm** when **Destination** is **Print** but you can only select **pixels** when **Destination** is **Image display**. The name of the added size

appears in **Output Size List**. Click **Save** to save the items listed in **Output Size List**.

Delete

To delete an item, select it in **Output Size List** and click **Delete**. Click **Save** to save the items listed in **Output Size List**.

>>> Important

■ You cannot delete predefined output sizes such as A4 and 1024 x 768 pixels.

>>> Note

- Save up to 10 items.
- An error message appears when you enter a value outside the setting range.Enter a value within the setting range.

>>> Note

■ For details on whether or how the cropping frame is initially displayed on a preview image, refer to **Cropping Frame on Previewed Images** in "Preview Tab" (**Preferences** dialog box).

• Invert aspect ratio

Available when **Output Size** is set to anything but **Flexible**.

Click this button to rotate the cropping frame. Click again to return it to the original orientation.

Adjust cropping frames

You can adjust the scan area within the Preview area.

If an area is not specified, the document will be scanned at the document size (Auto Crop). If an area is specified, only the portion in the cropping frame will be scanned.

- →Adjusting Cropping Frames (ScanGear)
- Image corrections

Allows you to apply corrections to images.

>>> Important

Apply Auto Document Fix and Correct fading are available when Recommended is selected on the Color Settings tab of the Preferences dialog box.

>>> Note

- Available functions vary by the document type selected in Select Source.
- Apply Auto Document Fix

Sharpens text in a document or magazine for better readability.

>>> Important

- Scanning may take longer than usual when this checkbox is selected.
- The color tone may change from the source image due to corrections. In that case, deselect the checkbox and scan.
- Correction may not be applied properly if the scan area is too small.

· Correct fading

Corrects and scans photos that have faded with time or have a colorcast.

· Reduce gutter shadow

Corrects shadows that appear between pages when scanning open booklets.

>>> Important

For precautions on using this function, refer to "Gutter Shadow Correction."

Color Pattern...

Allows you to adjust the image's overall color. You can correct colors that have faded due to colorcast, etc. and reproduce natural colors while previewing color changes.

→Adjusting Colors Using a Color Pattern

>>> Important

■ This setting is not available when you select **Color Matching** on the **Color Settings** tab of the **Preferences** dialog box.

Perform Scan

Scan

Starts scanning.

>>> Note

When scanning starts, the progress will be displayed. Click **Cancel** to cancel the scan.

· Preferences...

Opens the **Preferences** dialog box in which you can make scan/preview settings.

Close

Closes ScanGear (scanner driver).

(2) Toolbar

Toolbar

You can adjust or rotate preview images. The buttons displayed on the Toolbar vary by view.

In thumbnail view

In whole image view

• (Thumbnail) / (Whole Image)

Switches the view in the Preview area.

→ (3) Preview Area

• (Rotate Left)

Rotates the preview image 90 degrees counter-clockwise.

- The result will be reflected in the scanned image.
- The image returns to its original state when you preview again.

• 🕍 (Rotate Right)

Rotates the preview image 90 degrees clockwise.

- The result will be reflected in the scanned image.
- The image returns to its original state when you preview again.

• Auto Crop)

Displays and adjusts the cropping frame automatically to the size of the document displayed in the Preview area. The scan area is reduced every time you click this button if there are croppable areas within the cropping frame.

• ☑☑ (Check All Frames)

Available when two or more frames are displayed. Selects the checkboxes of the image in thumbnail view.

• Uncheck All Frames)

Available when two or more frames are displayed.

Deselects the checkboxes of the image in thumbnail view.

• (Select All Frames)

Available when two or more frames are displayed. Selects the images in thumbnail view and outlines them in blue.

(Select All Cropping Frames)

Available when two or more cropping frames are specified.

Turns the cropping frames into thick broken lines and applies the settings to all of them.

• (Remove Cropping Frame)

Removes the selected cropping frame.

• ण (Information)

Displays the version of ScanGear and the current scan settings (document type, etc.).

· ? (Open Guide)

Opens this page.

(3) Preview Area

Preview Area

This is where a trial image appears after you click **Preview**. You can also check the results of the settings (image corrections, color adjustments, etc.) made in "(1) Settings and Operation Buttons."

When [image] (Thumbnail) is displayed on the Toolbar

Cropping frames are specified according to the document size, and thumbnails of scanned images are displayed. Only the images with the checkbox selected will be scanned.

>>> Note

- When multiple images are previewed, different outlines indicate different selection status.
 - Focus Frame (thick blue outline): The displayed settings will be applied.
 - Selected Frame (thin blue outline): The settings will be applied to the Focus Frame and Selected Frames simultaneously. You can select multiple images by clicking them while pressing the Ctrl key.
 - Unselected (no outline): The settings will not be applied.
- Double-click a frame to zoom in on the image. Click (Frame Advance) at the bottom of the screen to display the previous or next frame. Double-click the frame again to return the display to its non-magnified state.

When ٵ (Whole Image) is displayed on the Toolbar

Items on the Platen are scanned and displayed as a single image. All portions in the cropping frames will be scanned.

>>> Note

- You can specify the cropping frame on the displayed image. In thumbnail view, you can only create one cropping frame per image. In whole image view, you can create multiple cropping frames.
- →Adjusting Cropping Frames (ScanGear)

Related Topic

Scanning in Basic Mode

Advanced Mode Tab

This mode allows you to make advanced scan settings such as the color mode, output resolution, image brightness, and color tone.

This section describes the settings and functions available on the **Advanced Mode** tab.

- (1) Settings and Operation Buttons
- (2) Toolbar
- (3) Preview Area

>>> Note

The displayed items vary by document type and view.

(1) Settings and Operation Buttons

Favorite Settings

You can name and save a group of settings (Input Settings, Output Settings, Image Settings, and Color Adjustment Buttons) on the **Advanced Mode** tab, and load it as required. It is convenient to save a group of settings if you will be using it repeatedly. You can also use this to reload the default settings.

Select **Add/Delete...** from the pull-down menu to open the **Add/Delete Favorite Settings** dialog box.

Enter **Setting Name** and click **Add**; the name appears in **Favorite Settings List**. When you click **Save**, the item appears in the **Favorite Settings** list and can be selected, along with the predefined items.

To delete an item, select it in **Favorite Settings List** and click **Delete**. Click **Save** to save the settings displayed in **Favorite Settings List**.

>>> Note

- You can set Add/Delete... in Favorite Settings after preview.
- Save up to 10 items.

Input Settings

Specify the input settings such as the document type and size.

Output Settings

Specify the output settings such as the output resolution and size.

Image Settings

Enable/disable various image correction functions.

Color Adjustment Buttons

Fine corrections to the image brightness and color tones can be made including adjustments to the image's overall brightness or contrast and adjustments to its highlight and shadow values (histogram) or balance (tone curve).

Zoom

Zooms in on a frame, or zooms in on the image in the area specified with a cropping frame (scan area). When zoomed in, **Zoom** changes to **Undo**. Click **Undo** to return the display to its non-magnified state.

In thumbnail view

When multiple images are displayed in thumbnail view, clicking this button zooms in on the selected frame. Click (Frame Advance) at the bottom of the screen to display the previous or next frame.

>>> Note

■ You can also zoom in on an image by double-clicking the frame. Double-click the frame again to return the display to its non-magnified state.

In whole image view

Rescans the image in the area specified with a cropping frame at higher magnification.

>>> Note

- **Zoom** rescans the document and displays high-resolution image in Preview.
- (Enlarge/Reduce) on the Toolbar zooms in on the preview image quickly.
 However, the resolution of the displayed image will be low.

Preview

Performs a trial scan.

Scan

Starts scanning.

>>> Note

- When scanning starts, the progress will be displayed. Click **Cancel** to cancel the scan.
- When scanning is completed, a dialog box prompting you to select the next action may appear. Follow the prompt to complete. For details, refer to **Status of ScanGear dialog after scanning** in "Scan Tab" (**Preferences** dialog box).

It will take time to process the images if the total size of the scanned images exceeds a certain size. In that case, a warning message appears; it is recommended that you reduce the total size. To continue, scan in whole image view.

Preferences...

Opens the **Preferences** dialog box in which you can make scan/preview settings.

Close

Closes ScanGear (scanner driver).

(2) Toolbar

Toolbar

You can adjust or rotate preview images. The buttons displayed on the Toolbar vary by view.

In thumbnail view

In whole image view

• (Thumbnail) / (Whole Image)

Switches the view in the Preview area.

→(3) Preview Area

• 🔳 (Clear)

Deletes the preview image from the Preview area. It also resets the Toolbar and color adjustment settings.

· (Crop)

Allows you to specify the scan area by dragging the mouse.

• (Move Image)

Allows you to drag the image until the part you want to see is displayed when an image enlarged in the Preview area does not fit in the screen. You can also move the image using the scroll bars.

(Enlarge/Reduce)

Allows you to zoom in on the Preview area by clicking the image. Right-click the image to zoom out.

(Rotate Left)

Rotates the preview image 90 degrees counter-clockwise.

- The result will be reflected in the scanned image.
- The image returns to its original state when you preview again.

(Rotate Right)

Rotates the preview image 90 degrees clockwise.

- The result will be reflected in the scanned image.
- The image returns to its original state when you preview again.

(Auto Crop)

Displays and adjusts the cropping frame automatically to the size of the document displayed in the Preview area. The scan area is reduced every time you click this button if there are croppable areas within the cropping frame.

✓✓ (Check All Frames)

Available when two or more frames are displayed.

Selects the checkboxes of the image in thumbnail view.

□□ (Uncheck All Frames)

Available when two or more frames are displayed.

Deselects the checkboxes of the image in thumbnail view.

• Select All Frames)

Available when two or more frames are displayed.

Selects the images in thumbnail view and outlines them in blue.

• Congression (Select All Cropping Frames)

Available when two or more cropping frames are specified.

Turns the cropping frames into thick broken lines and applies the settings to all of them

• (Remove Cropping Frame)

Removes the selected cropping frame.

(Information)

Displays the version of ScanGear and the current scan settings (document type, etc.).

• (Open Guide)

Opens this page.

(3) Preview Area

Preview Area

This is where a trial image appears after you click **Preview**. You can also check the results of the settings (image corrections, color adjustments, etc.) made in "(1) Settings and Operation Buttons."

When (Thumbnail) is displayed on the Toolbar

Cropping frames are specified according to the document size, and thumbnails of scanned images are displayed. Only the images with the checkbox selected will be scanned.

>>> Note

- When multiple images are previewed, different outlines indicate different selection status.
 - Focus Frame (thick blue outline): The displayed settings will be applied.
 - Selected Frame (thin blue outline): The settings will be applied to the Focus Frame and Selected Frames simultaneously. You can select multiple images by clicking them while pressing the Ctrl key.
 - Unselected (no outline): The settings will not be applied.

When (Whole Image) is displayed on the Toolbar

Items on the Platen are scanned and displayed as a single image. All portions in the cropping frames will be scanned.

>>> Note

- You can specify the cropping frame on the displayed image. In thumbnail view, you can only create one cropping frame per image. In whole image view, you can create multiple cropping frames.
- → Adjusting Cropping Frames (ScanGear)

Related Topic

Scanning in Advanced Mode

Input Settings

Input Settings allows you to set the following items:

Select Source

The type of document to be scanned is displayed.

Paper Size

Select the size of the document to be scanned. This setting is available in whole image view only.

When you select a size, the Preview area size changes accordingly.

>>> Important

- Some applications have a limit to the amount of scan data they can receive. Available scan range is as follows.
 - 21000 pixels x 30000 pixels or less
- If you change Paper Size after previewing, the preview image will be deleted.

>>> Note

If you are not sure which size you should select for **Paper Size**, set **Paper Size** to **Full Platen**, then measure the size of the document and enter the values into (Width) and (Height).

Color Mode

Select how to scan the document.

Color

Select this mode to scan color documents or to create color images. This mode renders the image in 256 levels (8 bit) of R(ed), G(reen), and B(lue).

Grayscale

Select this mode to scan black and white photos or to create black and white images. This mode renders the image in 256 levels (8 bit) of black and white.

Black and White

Select this mode to scan photos and documents in black and white. This mode renders the image in black and white. The contrast in the image is divided at certain levels (threshold level) into black and white and is rendered in two colors. The threshold level can be set with (Threshold).

Input Size

In thumbnail view, the cropped document size is displayed after preview. In whole image view, the **Paper Size** is displayed before preview, and the cropping frame (scan area) size is displayed after preview.

You can adjust the cropping frame size by entering the values into [‡] (Width) and [‡] (Height).

Click (Change Aspect Ratio) and change it to (Keep Aspect Ratio) to maintain the aspect ratio when you specify the cropping frame size.

>>> Important

Input size settings are available only when **Output Size** in **Output Settings** is **Flexible**. If you select a size other than **Flexible**, a cropping frame calculated from **Output Size** and **Output Resolution** is displayed, and its aspect ratio is fixed.

>>> Note

- The values you can enter will be within the range of the selected document size. The minimum size is 96 pixels x 96 pixels when **Output Resolution** is 600 dpi, scaled at 100 %
- When Auto Crop is performed in whole image view, the aspect ratio will not be maintained since the size will be prioritized.
- Refer to "Adjusting Cropping Frames (ScanGear)" for details on cropping frames.

Output Settings

Output Settings allows you to set the following items:

Output Resolution

Select the resolution to scan at.

The higher the resolution (value), the more detail in your image.

Select a resolution from the options displayed by clicking the button, or enter a value within the range of 25 dpi to 19200 dpi (in 1 dpi increments).

Refer to "Resolution" for your model from Home of the Online Manual for details.

Output Size

Select an output size.

Select **Flexible** to set custom sizes or select a size for printing or displaying. Select **Add/ Delete...** to set custom size and save it as a new output size option.

Flexible

You can specify the output resolution and scale, and adjust the cropping frames (scan areas).

In thumbnail view

Drag the mouse over a thumbnail to display a cropping frame. When a cropping frame is displayed, the portion within the cropping frame will be scanned. When no cropping frame is displayed, each frame is scanned individually.

In whole image view

When no cropping frame is displayed, the entire Preview area will be scanned. When a cropping frame is displayed, the portion within the cropping frame will be scanned.

>>> Note

■ To enlarge/reduce the scanned image, enter values into (Width) and (Height) in **Output Settings** or specify a value (by 1 %) for %. Although the maximum value available for % depends on the **Output Resolution**, it can be specified for up to 19200 dpi (the maximum available output resolution).

Paper Size (L, A4, etc.) & Monitor Size (1024 x 768 pixels, etc.)

(Width), (Height), and scale cannot be specified. The preview image will be cropped according to the selected output size and resolution. The portion within the cropping frame will be scanned at the size of the selected paper/monitor size. You can drag the cropping frame to enlarge, reduce, or move it while maintaining the aspect ratio.

Add/Delete...

Opens the **Add/Delete the Output Size** dialog box, in which you can specify custom output sizes.

In the **Add/Delete the Output Size** dialog box, you can specify multiple output sizes and save them at one time. Saved items will be registered to the **Output Size** list and can be selected, along with the predefined items.

Add

To add a size, select **Print** or **Image display** for **Destination**, then enter **Output Size Name**, **Width**, and **Height** then click **Add**. For **Unit**, you can select **inches** or **mm** when **Destination** is **Print** but you can only select **pixels** when **Destination** is **Image display**. The name of the added size appears in **Output Size List**. Click **Save** to save the items listed in **Output Size List**.

Delete

To delete an item, select it in **Output Size List** and click **Delete**. Click **Save** to save the items listed in **Output Size List**.

>>> Important

■ You cannot delete predefined output sizes such as A4 and 1024 x 768 pixels.

>>> Note

- Save up to 10 items for each destination.
- An error message appears when you enter a value outside the setting range.Enter a value within the range displayed in the message.

>>> Note

- Refer to "Adjusting Cropping Frames (ScanGear)" for details on cropping frames.
- For details on whether or how the cropping frame is initially displayed on a preview image, refer to **Cropping Frame on Previewed Images** in "Preview Tab" (**Preferences** dialog box).

• (Switch Aspect Ratio)

Available when **Output Size** is set to anything but **Flexible**. Click this button to rotate the cropping frame. Click again to return it to the original orientation.

Data Size

The data size when scanned with the current settings is displayed.

>>> Note

■ When the data size exceeds a certain size, the value appears in red. In that case, a warning message appears when you click **Scan**. It is recommended that you adjust the settings to reduce **Data Size**. To continue, scan in whole image view.

Image Settings

>>> Important

- Do not apply these functions to images without moire, dust/scratches, or faded colors.
 The color tone may be adversely affected.
- Image correction results may not be reflected in the preview image.

>>> Note

- Selectable settings depend on Color Mode settings.
- Scanning may take longer than usual when you use Image Settings.

Image Settings allows you to set the following items:

Image Adjustment

When Image Adjustment is set, the brightness of the specified portion of the image is optimized. Images can be adjusted according to the automatically detected document type or the specified document type. The result of the adjustment will be reflected in the entire image.

None

Image Adjustment will not be applied.

Auto

Applies Image Adjustment by automatically detecting the document type. It is recommended that you normally select this setting.

Photo

Applies Image Adjustment suitable for photos.

Magazine

Applies Image Adjustment suitable for magazines.

Document

Applies Image Adjustment suitable for text documents.

>>> Important

- You can set Image Adjustment after preview.
- You can set this setting when Recommended is selected on the Color Settings tab of the Preferences dialog box.

Note

- If the image is not adjusted properly with Auto, specify the document type.
- The color tone may change from the source image due to the Image Adjustment. In that case, set **Image Adjustment** to **None**.

Reduce Show-through

Use this function to reduce show-through in duplex documents or lighten the base color in recycled paper and other colored paper when scanning documents.

OFF

Show-through will not be reduced.

ON

Select this to reduce show-through in duplex documents or lighten the base color. It is recommended that you normally select this setting.

>>> Important

Reduce Show-through can be set when Recommended is selected on the Color Settings tab of the Preferences dialog box and Document or Magazine is selected for Image Adjustment.

Unsharp Mask

Emphasizes the outline of the subjects to sharpen the image when scanning photos.

OFF

Unsharp Mask will not be applied.

ON

Emphasizes the outline of the subjects to sharpen the image. It is recommended that you normally select this setting.

Descreen

Printed photos and pictures are displayed as a collection of fine dots. "Moire" is a phenomenon where uneven gradation or a stripe pattern appears when such photos or

pictures printed with fine dots are scanned. **Descreen** is the function for reducing this moire effect.

OFF

Moire will not be reduced.

ON

Reduces moire. It is recommended that you normally select this setting.

>>> Note

Even if Descreen is set to ON, some moire effects may remain if Unsharp Mask is set to ON. In that case, set Unsharp Mask to OFF.

Reduce Dust and Scratches

Scanned photos may contain white dots caused by dust or scratches. Use this function to reduce such noise.

None

Dust and scratches will not be reduced.

Low

Select this to reduce small dust particles and scratches. Large ones may remain.

Medium

It is recommended that you normally select this setting.

High

Select this to reduce large dust particles and scratches; however, evidence of the reduction process may remain or delicate parts of the image may be removed.

>>> Important

This function may not be effective for some types of photos.

>>> Note

It is recommended that you select None when scanning printed materials.

Fading Correction

Use this function to correct photos that have faded with time or have a colorcast.

"Colorcast" is a phenomenon where a specific color affects the entire picture due to the weather or ambient strong colors.

None

Fading Correction will not be applied.

Low

Select this to correct a small amount of fading and colorcast.

Medium

It is recommended that you normally select this setting.

High

Select this to correct a large amount of fading and colorcast. This can affect the tone of the image.

>>> Important

- You can set Fading Correction after preview.
- You can set this setting when Recommended is selected on the Color Settings tab of the Preferences dialog box.
- Correction may not be applied properly if the scan area is too small.

Grain Correction

Use this function to reduce graininess (roughness) in photos taken with high-speed or sensitized film.

None

Graininess will not be reduced.

Low

Select this when the photo is slightly grainy.

Medium

It is recommended that you normally select this setting.

High

Select this when the photo is very grainy. This can affect the gradation and sharpness of the image.

>>> Important

Correction may not be applied properly if the scan area is too small.

Gutter Shadow Correction

Use this function to correct shadows that appear between pages when scanning open booklets.

When you set the **Gutter Shadow Correction** setting in the preview image, the result will be reflected. Preview the effects before scanning, as results vary depending on the type of document and how it is pressed.

Unclear or blurred text/lines caused by curved pages are not corrected.

None

Gutter shadow will not be corrected.

Low

Select this when the effect level is too strong with the medium setting.

Medium

It is recommended that you normally select this setting.

High

Select this when the effect level is too weak with the medium setting.

>>> Important

- Do not place objects that weigh 4.4 lbs (2.0 kg) or more on the Platen. Also, do not press on the document with a force exceeding 4.4 lbs (2.0 kg). If you press heavily, the scanner may not work correctly or you might break the glass.
- Align the document with the edge of the Platen. If not, the shadow will not be corrected properly.

- Shadows may not be corrected properly depending on the document. If the page background is not white, shadows may not be detected correctly or may not be detected at all.
- While scanning, press down on the spine with the same amount of pressure you used to preview the scan. If the binding part is not even, the shadow will not be corrected properly.

How to place the document depends on your model and the document to be scanned.

>>> Note

- Cover the document with black cloth if white spots, streaks, or colored patterns appear in scan results due to ambient light entering between the document and the Platen.
- If the shadow is not corrected properly, adjust the cropping frame (scan area) on the preview image.
- → Adjusting Cropping Frames (ScanGear)

Color Adjustment Buttons

The Color Adjustment Buttons allow you to make fine corrections to the image brightness and color tones including adjustments to the image's overall brightness or contrast and adjustments to its highlight and shadow values (histogram) or balance (tone curve).

Important

The Color Adjustment Buttons are not available when you select Color Matching on the Color Settings tab of the Preferences dialog box.

Note

- Selectable settings depend on Color Mode settings.
- When you adjust the image via the Color Adjustment Buttons, the results will be reflected in the preview image.

Click a Color Adjustment Button to set the following items:

(Saturation/Color Balance)

Adjust the saturation (vividness) and color tone of the image. Use this function to brighten colors that have faded with time or due to colorcast. "Colorcast" is a phenomenon where a specific color affects the entire picture due to the weather or ambient strong colors.

→Adjusting Saturation and Color Balance

• (Brightness/Contrast)

Adjust the brightness and contrast of the image. If the image is too dark or too bright, or if the image quality is flat due to lack of contrast, you can adjust the levels of brightness and contrast.

→Adjusting Brightness and Contrast

A histogram allows you to see the data concentration at each brightness level of an image. You can specify the brightest level (highlight) and darkest level (shadow) within an image, cut the levels and expand the middle of the tonal range of the image.

→Adjusting Histogram

• (Tone Curve Settings)

Adjust the brightness of an image by selecting the type of graph (tone curve) showing the balance of tone input and output. You can make fine adjustments to the brightness of a specific area.

→Adjusting Tone Curve

• 🔼 (Final Review)

Make a final check of color adjustments. The final synthesized tone curve and the histogram derived from the subsequent image processing will be displayed. There are no settings to make in this screen.

- For a color image, select a color in Channel to check either Red, Green, or Blue, or select Master to check three colors together.
- If you place the cursor on the preview image, the portion will be enlarged and its RGB values (only L when Color Mode is Grayscale) before and after the adjustments will be displayed.

· (Threshold)

Set the boundary (threshold) at which black and white are divided. By adjusting the threshold level, you can sharpen text in a document or reduce show-through in newspapers.

→ Setting Threshold

Custom

You can name and save a set of tone curve and threshold settings of the Color Adjustment Buttons.

Select Add/Delete... from the pull-down menu; when Color Mode is set to anything but Black and White, the Add/Delete Tone Curve Settings dialog box opens; when Color Mode is Black and White, the Add/Delete Threshold Settings dialog box opens.

Enter **Setting Name** and click **Add**; the name appears in **Tone Curve Settings List** or **Threshold Settings List**. Click **Save** to save.

To delete an item, select it in **Tone Curve Settings List** or **Threshold Settings List** and click **Delete**. Click **Save** to save the settings displayed in **Tone Curve Settings List** or **Threshold Settings List**.

You can load and apply the saved tone curve/threshold settings to a preview image. To load the settings, select the saved item from the pull-down menu.

>>> Note

Save up to 20 items.

Defaults

Reset all adjustments (saturation/color balance, brightness/contrast, histogram, and tone curve).

Preferences Dialog Box

Click **Preferences...** in the ScanGear (scanner driver) screen to open the **Preferences** dialog box.

In the **Preferences** dialog box, you can make advanced settings to ScanGear functions via the **Scanner**, **Preview**, **Scan**, and **Color Settings** tabs.

Scanner Tab

Allows you to set the quiet mode, auto power settings, folder in which to save images temporarily, and music file to play during or at the end of a scan.

Preview Tab

Allows you to select what to do with Preview when ScanGear is started, how to display cropping frames after previewing images, and the cropping size for thumbnails of scanned documents.

Scan Tab

Allows you to select what to do with ScanGear after scanning image.

Color Settings Tab

Allows you to select how to adjust color, and specify the monitor gamma value.

Scanner Tab

On the **Scanner** tab, you can specify the following settings.

Auto Power Settings

You can set to turn the machine on or off automatically.

Click **Settings...** to display the **Auto Power Settings** dialog box.

>>> Note

If the machine is off or bi-directional communication is disabled, a message may appear because the computer cannot collect the machine status. In that case, click **OK** to exit ScanGear (scanner driver).

Auto Power On

Select **Enable** to turn on the machine automatically when data is received.

Auto Power Off

Specify the amount of time you want to set from the list. When this time lapses without any data being received, the machine turns off automatically.

Quiet Settings

The silent function allows you to reduce the operating noise of this machine. Use this when you wish to reduce the operating noise such as when scanning or printing at night.

Click **Settings...** to set the quiet mode.

>>> Note

You can set the quiet mode from the operation panel of the machine, the printer driver, or ScanGear.

No matter how the setting is made, it applies to operations from the operation panel of the machine or when printing/scanning from a computer, etc.

Scanning or printing may take longer than usual when this function is used.

Do not use quiet mode

Select this option when you wish to use the machine with volume of normal operating noise.

Always use quiet mode

Select this option when you wish to reduce the operating noise of the machine.

Use quiet mode during specified hours

Select this option when you wish to reduce the operating noise of the machine during a specified period of time.

Set the **Start time** and **End time** during which quiet mode is to be activated.

>>> Important

- The time specified in **Start time** and in **End time** must be different.
- When the hours are specified, quiet mode is not applied to operations (copy, direct print, etc.) performed directly from the machine.

Select Folder Where Temporary Files are Saved

Displays the folder in which to save images temporarily. To change the folder, click **Browse...** to specify another one.

Sound Settings

You can set the machine to play music during/at the end of a scan.

Select the Play Music During Scanning or Play Sound When Scanning is Completed checkbox, then click Browse... and specify a sound file.

You can specify the following files.

- MIDI file (*.mid, *.rmi, *.midi)

- Audio file (*.wav, *.aif, *.aiff)
- MP3 file (*.mp3)

Calibration Settings

When you set **Execute at Every Scan** to **ON**, the scanner will be calibrated every time before previewing and scanning, to reproduce correct color tones in scanned images.

>>> Note

- Even when **Execute at Every Scan** is set to **OFF**, the scanner may be calibrated automatically in some cases (such as immediately after you turn the machine on).
- Calibration may take time depending on your computer.

Preview Tab

On the **Preview** tab, you can specify the following settings.

Preview at Start of ScanGear

Select what to do with Preview when ScanGear (scanner driver) is started.

Automatically Execute Preview

ScanGear will automatically start previewing at startup.

Display Saved Preview Image

The previously previewed image will be displayed.

The Color Adjustment Button settings, the Toolbar settings, and the **Advanced Mode** tab settings are also saved.

None

No preview image will be displayed at startup.

>>> Note

Select None if you do not want to save the preview image.

Cropping Frame on Previewed Images

Select how to display cropping frames after previewing images.

Execute Auto Cropping on Previewed Images

The cropping frame (scan area) will automatically be displayed in the document size after previewing.

Display the Last Frame on Previewed Images

A cropping frame of the same size as the last used cropping frame will be displayed after previewing.

None

No cropping frame will be displayed after previewing.

Cropping Size for Thumbnail View

Select the cropping size for thumbnails of scanned documents.

Larger

Displays 105 % (in width and height) of the area displayed for the standard size.

Standard

The standard size.

Smaller

Displays 95 % (in width and height) of the area displayed for the standard size.

>>> Note

■ When you change the **Cropping Size for Thumbnail View** setting, the preview images will be refreshed and cropped to the new size. As the preview images are refreshed, the color adjustments and other settings applied to them are reset.

Scan Tab

On the **Scan** tab, you can specify the following settings.

Status of ScanGear dialog after scanning

Select what to do with ScanGear (scanner driver) after scanning images.

Close ScanGear automatically

Select this to return to the original application when scanning is completed.

Do not close ScanGear automatically

Select this to return to the ScanGear screen for another scan when scanning is completed.

Display the dialog to select next action

Select this to open a screen and select what to do when scanning is completed.

>>> Note

■ Even if **Do not close ScanGear automatically** or **Display the dialog to select next action** is set, some applications may not support it.

Color Settings Tab

On the **Color Settings** tab, you can specify the following settings.

Color Adjustment

Select one of the following.

You can select one when Color Mode is Color or Grayscale.

Recommended

Select this to vividly reproduce the tone of a document on the screen. It is recommended that you normally select this setting.

Color Matching

Select this to automatically match the scanner, monitor, and color printer colors, thus reducing time and trouble to manually match the monitor and printer colors.

Color Adjustment Buttons will be disabled.

This function is available when **Color Mode** is **Color**.

- Source(Scanner): Select scanner profile.
- Target: Select target profile.
- **Monitor**: Select this checkbox to display preview image with optimum correction for monitor.
- **Defaults**: Returns to the default **Color Matching** settings.

None

Select this to disable color correction provided by ScanGear (scanner driver).

>>> Note

 Color Matching is available when ScanGear, monitor, color management-compliant application (such as Adobe Photoshop), and printer are set up correctly.
 Refer to the corresponding manual for the monitor, printer, and application settings.

Monitor Gamma

By setting the gamma value of a monitor, you can adjust the input data to the brightness characteristics of the monitor. Adjust the value if your monitor's gamma value does not match the default value set in ScanGear, and the colors of the original image are not accurately reflected in the monitor.

Click **Defaults** to return to the default Monitor Gamma value (2.20).

>>> Note

Refer to the manual of your monitor to check its gamma value. If it is not written in the manual, contact the manufacturer.

Placing Items (When Scanning from a Computer)

Learn how to place items on the platen of your scanner or printer. Place items correctly according to the type of item to be scanned. Otherwise, items may not be scanned correctly.

>>> Important

- Do not place objects on the document cover. When you open the document cover, the objects may fall into your scanner or printer, resulting in malfunction.
- Close the document cover when scanning.

Placing Items

Place items as described below to scan by detecting the item type or size automatically.

>>> Important

- When scanning by specifying the paper size in IJ Scan Utility or ScanGear (scanner driver), align an upper corner of the item with the corner at the arrow (alignment mark) of the platen.
- Photos that have been cut to various shapes and items smaller than 1.2 inches (3 cm) square cannot be cropped accurately when scanning.
- Reflective disc labels may not be scanned as expected.

For Photos, Postcards, Business Cards, or BD/DVD/CD

For Magazines, Newspapers, or Documents

Placing a Single Item

Place the item face-down on the platen, with 0.4 inch (1 cm) or more space between the edges (diagonally striped area) of the platen and the item. Portions placed on the diagonally striped area cannot be scanned.

Place the item face-down on the platen and align an upper corner of the item with the corner at the arrow (alignment mark) of the platen. Portions placed on the diagonally striped area cannot be scanned.

Important

■ Large items (such as A4 size photos) that cannot be placed away from the edges/ arrow (alignment mark) of the platen may be saved as PDF files. To save in a format other than PDF, scan by specifying the data format.

Placing Multiple Items

Allow 0.4 inch (1 cm) or more space between the edges (diagonally striped area) of the platen and items, and between items. Portions placed on the diagonally striped area cannot be scanned.

(A) more than 0.4 inch (1 cm)

>>> Note

- You can place up to 12 items.
- Positions of slanted items (10 degrees or less) are corrected automatically.

>>> Important

 Refer to "Loading Originals" for your model from Home of the *Online* Manual for details on the portions in which items cannot be scanned.

Adjusting Cropping Frames (ScanGear)

"Cropping" is the act of selecting the area you want to keep in an image and discarding the rest when scanning it.

On the **Basic Mode** tab and **Advanced Mode** tab, you can specify cropping frames (scan areas) on the image(s) displayed in the Preview area of the screen.

When you perform a scan, each area specified with a cropping frame will be scanned as a separate image.

>>> Note

- In whole image view, you can specify multiple cropping frames on the preview image.
- Refer to "Adjusting Cropping Frames in the Image Stitch Window" for your model from Home of the *Online Manual* for how to adjust cropping frames with IJ Scan Utility.

Initial Cropping Frame

In thumbnail view

No cropping frame is specified. You can drag the mouse over a thumbnail to specify a cropping frame.

In whole image view

An active cropping frame is automatically specified around the preview image. You can drag the cropping frame in the Preview area to specify the area.

>>> Note

You can change the auto crop setting in the **Preferences** dialog box. Refer to **Cropping Frame on Previewed Images** in "Preview Tab" for details.

Cropping Frame Types

(1) Thick cropping frame (rotating or stationary)

Represents a selected cropping frame. Appears only in whole image view. You can select multiple cropping frames by clicking them while pressing the Ctrl key. Output size, image corrections, and other settings on the **Basic Mode** tab or **Advanced Mode** tab will be applied to all the selected cropping frames.

(2) Thin cropping frame

- In thumbnail view

Output size, image corrections, and other settings on the **Basic Mode** tab or **Advanced Mode** tab will be applied.

- In whole image view

Represents an unselected cropping frame. The settings on the **Basic Mode** tab or **Advanced Mode** tab will not be applied.

Adjusting a Cropping Frame

The cursor will change into $\stackrel{\longleftarrow}{\downarrow} \stackrel{\frown}{\searrow} \stackrel{\frown}{} \stackrel{\frown}{}$ (Arrow) when it is positioned over a cropping frame. If you click and drag the mouse in the direction of the arrow, the cropping frame will expand or contract accordingly.

The cursor will change into (Crosshair Arrow) when it is positioned within a cropping frame. Click and drag the mouse to move the entire cropping frame.

>>> Note

- On the **Advanced Mode** tab, you can specify the cropping frame size by entering the values into [□] (Width) and [□] (Height) in **Input Settings**.
- You can rotate a cropping frame 90 degrees by clicking (Switch Aspect Ratio). However, (Switch Aspect Ratio) is not available when **Output Size** is **Flexible**.

Creating Multiple Cropping Frames

In thumbnail view

You can only create one cropping frame per image.

In whole image view

Click and drag the mouse in a space outside the existing cropping frame to create a new cropping frame in the Preview area. The new cropping frame will be the active cropping frame, and the old cropping frame will be the unselected cropping frame.

You can create multiple cropping frames and apply different scan settings to each cropping frame.

You can also select multiple cropping frames by clicking them while pressing the Ctrl key.

If you select multiple cropping frames and change the settings on a tab at the right of ScanGear, the settings will be applied to all the selected cropping frames.

When you create a new cropping frame, it retains the settings of the latest cropping frame.

>>> Note

- Create up to 12 cropping frames.
- Scanning takes longer than usual when multiple cropping frames are selected.

Deleting Cropping Frames

In thumbnail view

To delete a cropping frame, click an area outside the cropping frame on an image.

In whole image view

To delete a cropping frame, select it and click (Remove Cropping Frame) on the Toolbar. Alternatively, press the Delete key.

When there are multiple cropping frames, all the selected cropping frames (active cropping frame and selected cropping frames) are deleted simultaneously.

General Notes (Scanner Driver)

ScanGear (scanner driver) is subject to the following restrictions. Keep these points in mind when using it.

Scanner Driver Restrictions

- When using the NTFS file system, the TWAIN data source may not be invoked. This is because the TWAIN module cannot be written to the winnt folder for security reasons.
 Contact the computer's administrator for help.
- Some computers (including laptops) connected to the machine may not resume correctly from standby mode. In that case, restart the computer.
- Do not connect two or more scanner or multifunction printers with scanner function to the same computer simultaneously. If multiple scanning devices are connected, you cannot scan from the operation panel of the machine and also may experience errors while accessing the devices.
- Scanning may fail if the computer has resumed from sleep or standby mode. In that case, follow these steps and scan again.
 - 1. Turn off the machine.
 - Exit ScanGear, then disconnect the USB cable from the computer and reconnect it.
 - 3. Turn on the machine.
- ScanGear cannot be opened in multiple applications at the same time. Within an application, ScanGear cannot be opened for the second time when it is already open.
- Be sure to close the ScanGear window before closing the application.
- When using a network compatible model by connecting to a network, the machine cannot be accessed from multiple computers at the same time.
- When using a network compatible model by connecting to a network, scanning takes longer than usual.
- Make sure that you have adequate disk space available when scanning large images at high resolutions. For example, at least 300 MB of free space is required to scan an A4 document at 600 dpi in full-color.
- ScanGear and WIA driver cannot be used at the same time.
- Do not enter the computer into sleep or hibernate state during scanning.

Applications with Restrictions on Use

- If you start Media Center included in Windows XP Media Center Edition 2005, you may
 not be able to scan using the operation panel of the machine. In that case, restart the
 computer.
- You cannot scan images with Media Center included in Windows XP Media Center Edition 2005. Scan with other applications such as IJ Scan Utility.
- Some applications may not display the TWAIN user interface. In that case, refer to the application's manual and change the settings accordingly.
- Some applications do not support continuous scanning of multiple documents. In some cases, only the first scanned image is accepted, or multiple images are scanned as one image.
- To import scanned images into Microsoft Office 2000, first save them using IJ Scan Utility, then import the saved files from the **Insert** menu.
- When scanning Platen size images into Microsoft Office 2003 (Word, Excel, PowerPoint, etc.), click Custom Insert in the Insert Picture from Scanner or Camera screen. Otherwise, images may not be scanned correctly.
- When scanning images into Microsoft Office 2007/Microsoft Office 2010 (Word, Excel, PowerPoint, etc.), use Microsoft Clip Organizer.
- Images may not be scanned correctly in some applications. In that case, increase the operating system's virtual memory and retry.
- When image size is too large (such as when scanning large images at high resolution), your computer may not respond or the progress bar may remain at 0 % depending on the application. In that case, cancel the action (for example by clicking Cancel on the progress bar), then increase the operating system's virtual memory or reduce the image size/resolution and retry. Alternatively, scan the image via IJ Scan Utility first, then save and import it into the application.

Useful Information on Scanning

- Adjusting Cropping Frames in the Image Stitch Window
- Resolution
- Data Formats
- Color Matching

Adjusting Cropping Frames in the Image Stitch Window

"Cropping" is the act of selecting the area you want to keep in an image and discarding the rest when scanning it.

In the **Image Stitch** window, you can specify a cropping frame on the image displayed in the Preview area.

>>> Note

Refer to "Adjusting Cropping Frames (ScanGear)" for your model from Home of the *Online Manual* for how to adjust cropping frames with ScanGear (scanner driver).

Initial Cropping Frame

No cropping frame is specified. When you select the **Adjust cropping frames** checkbox, an active cropping frame is automatically specified around the image in the Preview area. You can drag the cropping frame to specify the area.

When you perform a scan, the image in the area specified with the cropping frame will be scanned.

Adjusting a Cropping Frame

The cursor will change into $\stackrel{\longleftarrow}{\downarrow} \stackrel{\frown}{\searrow} \stackrel{\frown}{\swarrow}$ (Arrow) when it is positioned over a cropping frame. Click and drag the mouse to expand or contract the cropping frame.

The cursor will change into (Crosshair Arrow) when it is positioned within a cropping frame. Click and drag the mouse to move the entire cropping frame.

Deleting Cropping Frames

To delete the cropping frame, deselect the **Adjust cropping frames** checkbox.

Resolution

The data in the image you have scanned is a collection of dots carrying information about brightness and color. The density of these dots is called "resolution", and resolution will determine the amount of detail your image contains. The unit of resolution is dots per inch (dpi). Dpi is the number of dots per inch (2.5 cm).

The higher the resolution (value), the more detail in your image; the lower the resolution (value), the less detail.

How to Set the Resolution

You can set the resolution in the following screens.

IJ Scan Utility

Resolution on the (Scanning from a Computer) tab of the Settings dialog box

ScanGear (Scanner Driver)

Output Resolution in Output Settings on the Advanced Mode tab

Appropriate Resolution Settings

Set the resolution according to the use of the scanned image.

Item Type	Use	Color Mode	Appropriate Resolution
Color photo	Copying (Printing)	Color	300 dpi
	Creating a postcard	Color	300 dpi
	Saving to a computer	Color	300 dpi
	Using on a website or attaching to e-mail	Color	150 dpi
Black and white photo	Saving to a computer	Grayscale	300 dpi
	Using on a website or attaching to e-mail	Grayscale	150 dpi
Text document (document or magazine)	Copying	Color, Grayscale, or Black and White	300 dpi

Attaching to e-mail	Color, Grayscale, or Black and White	150 dpi
Scanning text using OCR	Color or Grayscale	300 dpi

>>> Important

■ If you double the resolution, the data size of the scanned image quadruples. If the file is too large, the processing speed will slow down significantly, and you will experience inconvenience such as lack of memory. Set the minimum required resolution according to the use of the image.

>>> Note

• When you will be printing the scanned image by enlarging it, scan by setting a higher resolution than the recommended one above.

Data Formats

You can select a data format when saving scanned images. You should specify the most suitable data format according to how you want to use the image on which application.

Available data formats vary by application and operating system (Windows or Mac OS).

See below for the characteristics of each image data format.

PNG (Standard File Extension: .png)

A data format often used on websites.

PNG is suitable for editing saved images.

JPEG (Standard File Extension: .jpg)

A data format often used on websites and for digital camera images.

JPEG features high compression rates. JPEG images slightly degrade every time they are saved, and cannot be returned to their original state.

JPEG is not available for black and white images.

TIFF (Standard File Extension: .tif)

A data format featuring a relatively high compatibility between various computers and applications.

TIFF is suitable for editing saved images.

>>> Note

- Some TIFF files are incompatible.
- IJ Scan Utility supports the following TIFF file formats.
 - Uncompressed, black and white binary
 - Uncompressed, RGB (8 bits per channel)
 - Uncompressed, Grayscale

PDF (Standard File Extension: .pdf)

A data format for electronic documents, developed by Adobe Systems Incorporated.

It can be used on various computers and operating systems, and fonts can be embedded as well; therefore, people in different environments can exchange the files without being aware of the differences.

Color Matching

"Color Matching" is the act of making adjustments so that the color tones match between the original item, the monitor display, and the color printout. On your scanner or printer, the color tones are adjusted as shown below.

Example: When sRGB is selected as the output profile (target)

The image's color space is converted from the scanner's color space to sRGB by ScanGear.

When displaying on a monitor, the image's color space is converted from sRGB to the monitor's color space based on the operating system's monitor settings and the application's working space settings.

When printing, the image's color space is converted from sRGB to the printer's color space based on the application's print settings and the printer driver's settings.

IJ Network Scanner Selector EX Menu and Setting Screen

IJ Network Scanner Selector EX allows you to select the scanners or printers to be used for scanning or printing over a network from your computer or the operation panel.

After installation, IJ Network Scanner Selector EX appears in the notification area on the desktop.

>>> Important

- If you cannot scan over a network, download and upgrade to the latest MP Drivers from our website.
- While IJ Network Scanner Selector EX is enabled, it periodically transmits packets to check whether it can communicate with your scanner or printer over the network. When using the computer in a network environment other than the one used to set up your scanner or printer, disable IJ Network Scanner Selector EX.

>>> Note

- If the icon is not displayed in the notification area on the desktop, follow the procedure below to start.
 - Windows 8: Select the **Search** charm, then click IJ Network Scanner Selector EX from the displayed screen.
 - Windows 7/Windows Vista/Windows XP:
 From the **Start** menu, click **All Programs** > Canon Utilities > IJ Network Scanner
 Selector EX > IJ Network Scanner Selector EX.

Menu

Displays a menu when you right-click (IJ Network Scanner Selector EX) in the notification area on the desktop.

 Disable Canon IJ Network Scanner Selector EX / Enable Canon IJ Network Scanner Selector EX

Enables or disables IJ Network Scanner Selector EX.

When you select **Disable Canon IJ Network Scanner Selector EX**, you will not be able to scan over a network from the operation panel.

Enabled: 🥙, Disabled: 💆

>>> Important

When using a model with which you cannot scan over a network from the operation panel, you cannot scan using the operation panel even if this setting is enabled.

Settings...

The Scan-from-PC Settings screen appears. You can select the model you want to use.

About

Displays the version information.

Exit

Exits IJ Network Scanner Selector EX; (Enabled) or (Disabled) disappears from the notification area on the desktop.

Scan-from-PC Settings Screen

Your scanner or printer must be selected with IJ Network Scanner Selector EX before scanning over a network.

Right-click the icon from the notification area on the desktop, then select **Settings...** to display the Scan-from-PC Settings screen.

Scanners

MAC addresses of the scanners or printers that can be used over the network are displayed.

You can select one scanner or printer per model. Selecting a scanner or printer automatically enables scanning from the operation panel.

Instructions

Opens this guide.

Scan-from-Operation-Panel Settings

The Scan-from-Operation-Panel Settings screen appears. You can select up to three scanners and printers in total for scanning from the operation panel. You can scan items using the operation panel of the selected scanner or printer, and send the scanned images to your computer over a network.

>>> Important

When using a model with which you cannot scan over a network from the operation panel, that model does not appear in **Scanners** and the setting is not available.

Scan-from-Operation-Panel Settings Screen

Click **Scan-from-Operation-Panel Settings** in the Scan-from-PC Settings screen to display the Scan-from-Operation-Panel Settings screen.

Scanners

MAC addresses of the scanners or printers that can be used over the network are displayed.

You can select up to three scanners and printers in total at the same time. Selecting a scanner or printer automatically enables scanning from the operation panel.

Instructions

Opens this guide.

>>> Important

■ When using a model with which you cannot scan over a network from the operation panel, **Scan-from-Operation-Panel Settings** may appear in the Scan-from-PC Settings screen; however, the setting is not available.

>>> Note

- If your scanner or printer does not appear, check the following, click **OK** to close the screen, then reopen it and try selecting again.
 - MP Drivers is installed
 - Network settings of your scanner or printer is completed after installing the MP Drivers
- Network communication between your scanner or printer and computer is enabled If your scanner or printer still does not appear, refer to "Problems with Network Communication" for your model from Home of the *Online Manual*.
- You do not need to use this software when scanning via USB. Refer to "Uninstalling IJ Network Scanner Selector EX" to delete it. You can scan via USB even if it is not deleted.

Uninstalling IJ Network Scanner Selector EX

Follow the procedure below to uninstall IJ Network Scanner Selector EX from your computer.

Important

- You cannot scan over a network after uninstalling IJ Network Scanner Selector EX.
- Log into a user account with administrator privilege.
- 1. Uninstall IJ Network Scanner Selector EX.
 - In Windows 8:
 - 1. Select the **Search** charm, then click **Control Panel** from the displayed screen.
 - 2. Click Programs and Features.
 - 3. Select Canon IJ Network Scanner Selector EX from the program list, then click **Uninstall/Change**.

>>> Note

- If the User Account Control screen appears, click Continue.
- In Windows 7 or Windows Vista:
 - 1. Click Start > Control Panel > Programs > Programs and Features.
 - 2. Select Canon IJ Network Scanner Selector EX from the program list, then click **Uninstall/Change**.

>>> Note

- If the User Account Control screen appears, click Continue.
- In Windows XP:
 - 1. Click Start > Control Panel > Add or Remove Programs.
 - 2. Select Canon IJ Network Scanner Selector EX from the program list, then click **Change/Remove**.
- 2. Click **Yes** when the confirmation message appears.
- 3. When uninstallation is complete, click OK.

>>> Note

■ When the message prompting you to restart your computer appears, click **OK** to restart your computer.

Other Scanning Methods

- Scanning with WIA Driver
- Scanning Using the Control Panel (Windows XP Only)

Scanning with WIA Driver

You can scan an item from a WIA (Windows Image Acquisition)-compliant application.

WIA is a driver model implemented in Windows XP or later. It allows you to scan items without using an application.

The procedure varies depending on the application. The following procedures are examples only.

Refer to the application's manual for details.

>>> Important

- In Windows XP, you cannot scan using the WIA driver via a network connection.
- Follow these steps to enable scanning over a network.

The setting may have been completed already depending on your environment. In that case, **Uninstall** appears.

- 1. Follow the procedure below to open **Network**.
 - Windows 8: Select the **Search** charm, then click **Network** displayed by searching for "Network".
 - Windows 7: From the Start menu, select Computer > Network.
 - Windows Vista: From the Start menu, select Network.
- 2. Right-click **XXX_MAC** address (where "XXX" is the model name) in the displayed screen, then select **Install**.

Scanning with WIA Driver 2.0

The following is an example of scanning using "Windows Fax and Scan."

- 1. Place the item on the platen.
 - ⇒ Placing Items (When Scanning from a Computer)
- 2. Select **New** on the **File** menu of "**Windows Fax and Scan**," then click **Scan...**.

The scan setting screen appears.

>>> Note

If you have more than one scanner or printer, a scanner selection screen may appear. Double-click the scanner you want to use.

For USB connection: **Canon XXX series** (where "XXX" is the model name)
For network connection: **XXX series_MAC address** (where "XXX" is the model name)

3. Specify the settings.

Scanners

The currently set product name is displayed. To change the scanner, click **Change...** and select the product you want to use.

Profile

Select **Photo (Default)** or **Documents** according to the item to be scanned. To save a new **Profile**, select **Add profile...**. You can specify the details in the **Add New Profile** dialog box.

Source

Select a scanner type.

Paper size

This setting is not available for your scanner or printer.

Color format

Select the color mode in which to scan the item.

File type

Select a data format from JPEG, BMP, PNG, and TIFF.

Resolution (DPI)

Enter the resolution. Specify a value between 50 dpi and 600 dpi.

→ Resolution

>>> Note

When using the scanner or printer with network connection, the following resolutions can be specified.

150 dpi / 300 dpi / 600 dpi

Brightness

Move the slider to adjust the brightness. Move it to the left to darken and right to brighten the image. You can also enter a value (-100 to 100).

Contrast

Move the slider to adjust the contrast. Moving it to the left will decrease the contrast of the image, thus softening the image. Moving it to the right will increase the contrast of the image, thus sharpening the image. You can also enter a value (-100 to 100).

Preview or scan images as separate files

Select this checkbox to preview or scan multiple images as separate files.

>>> Important

- When using the scanner or printer with network connection, you cannot specify Brightness, Contrast, and Preview or scan images as separate files.
- 4. Click **Preview** to preview the image.

The preview image appears on the right.

5. Click Scan.

When scanning is completed, the scanned image appears in the application.

Scanning with WIA Driver 1.0

The following is an example of scanning using "Paint."

- 1. Place the item on the platen.
 - →Placing Items (When Scanning from a Computer)
- 2. Click From scanner or camera from the File menu of Paint. (Select the command to scan an item in the application.)
- **3.** Select the type of picture according to the item to be scanned.

Select from Color picture, Grayscale picture, Black and white picture or text, and Custom Settings.

>>> Note

- When using the scanner or printer with network connection, the options for the type of picture may differ from those displayed with USB connection.
- To scan with the values previously set in Adjust the quality of the scanned picture, select Custom Settings.
- Click Adjust the quality of the scanned picture and set the preferences as required.
 - Brightness

Move the slider to adjust the brightness. Move it to the left to darken and right to brighten the image. You can also enter a value (-127 to 127).

Contrast

Move the slider to adjust the contrast. Moving it to the left will decrease the contrast of the image, thus softening the image. Moving it to the right will increase

the contrast of the image, thus sharpening the image. You can also enter a value (-127 to 127).

Resolution (DPI)

Enter the resolution. Specify a value between 50 dpi and 600 dpi.

→ Resolution

>>> Note

When using the scanner or printer with network connection, the following resolutions can be specified.

150 dpi / 300 dpi / 600 dpi

Picture type

Select the type of scan you want for your item.

Reset

Click to restore the original settings.

>>> Important

When using the scanner or printer with network connection, you cannot specify Brightness and Contrast.

5. Click **Preview** to preview the image.

The preview image appears on the right. Drag \square to specify the scan area.

6. Click Scan.

When scanning is completed, the scanned image appears in the application.

Scanning Using the Control Panel (Windows XP Only)

You can scan images via the Control Panel of Windows XP using the WIA driver.

>>> Important

- When using the scanner or printer with network connection, you cannot scan using the WIA driver.
- 1. From the **Start** menu, select **Control Panel**.
- Click Printers and Other Hardware > Scanners and Cameras, then double-click Canon XXX series (where "XXX" is the model name).
 The Scanner and Camera Wizard dialog box appears.
- 3. Click Next.
- **4.** Select **Picture type** according to the item to be scanned.

>>> Note

- To scan with the values previously set in **Custom settings**, select **Custom**.
- 5. Click **Custom settings** to set the preferences as required.

Brightness

Move the slider to adjust the brightness. Move it to the left to darken and right to brighten the image. You can also enter a value (-127 to 127).

Contrast

Move the slider to adjust the contrast. Moving it to the left will decrease the contrast of the image, thus softening the image. Moving it to the right will increase the contrast of the image, thus sharpening the image. You can also enter a value (-127 to 127).

Resolution (DPI)

Enter the resolution. Specify a value between 50 dpi and 600 dpi.

→ Resolution

Picture type

Select the type of scan you want for your item.

Reset

Click to restore the original settings.

6. Click **Preview** to preview the image.

The preview image appears on the right. Drag

to specify the scan area.

7. Click **Next** and follow the instructions.

Placing Items (When Scanning from a Computer)

Learn how to place items on the platen of your scanner or printer. Place items correctly according to the type of item to be scanned. Otherwise, items may not be scanned correctly.

>>> Important

- Do not place objects on the document cover. When you open the document cover, the objects may fall into your scanner or printer, resulting in malfunction.
- Close the document cover when scanning.

Placing Items

Place items as described below to scan by detecting the item type or size automatically.

>>> Important

- When scanning by specifying the paper size in IJ Scan Utility or ScanGear (scanner driver), align an upper corner of the item with the corner at the arrow (alignment mark) of the platen.
- Photos that have been cut to various shapes and items smaller than 1.2 inches (3 cm) square cannot be cropped accurately when scanning.
- Reflective disc labels may not be scanned as expected.

For Photos, Postcards, Business Cards, or BD/DVD/CD

For Magazines, Newspapers, or Documents

Placing a Single Item

Place the item face-down on the platen, with 0.4 inch (1 cm) or more space between the edges (diagonally striped area) of the platen and the item. Portions placed on the diagonally striped area cannot be scanned.

Place the item face-down on the platen and align an upper corner of the item with the corner at the arrow (alignment mark) of the platen. Portions placed on the diagonally striped area cannot be scanned.

Important

■ Large items (such as A4 size photos) that cannot be placed away from the edges/ arrow (alignment mark) of the platen may be saved as PDF files. To save in a format other than PDF, scan by specifying the data format.

Placing Multiple Items

Allow 0.4 inch (1 cm) or more space between the edges (diagonally striped area) of the platen and items, and between items. Portions placed on the diagonally striped area cannot be scanned.

(A) more than 0.4 inch (1 cm)

>>> Note

- You can place up to 12 items.
- You can place up to four items when the Compress scanned images upon transfer checkbox is selected in the Settings dialog box of IJ Scan Utility.
- Positions of slanted items (10 degrees or less) are corrected automatically.

Important

Refer to "Loading Originals" for your model from Home of the *Online Manual* for details on the portions in which items cannot be scanned.

Network Scan Settings

You can connect your scanner or printer to a network to share it among multiple computers.

Important

Multiple users cannot scan at the same time.

>>> Note

- Complete the network settings of your scanner or printer beforehand from the Setup CD-ROM or by following the instructions on the web page.
- With network connection, scanning takes longer than USB connection.

Complete the following settings to enable scanning over a network.

Specifying Your Scanner or Printer

Use IJ Network Scanner Selector EX to specify the scanner you want to use. By specifying the scanner, you can scan over a network from your computer.

Important

If the product you want to use is changed with IJ Network Scanner Selector EX, the product used for scanning with IJ Scan Utility changes as well.

If your scanner or printer is not selected in IJ Scan Utility, check that it is selected with IJ Network Scanner Selector EX.

Refer to "IJ Network Scanner Selector EX Menu and Setting Screen" for your model from Home of the *Online Manual* for details.

1. Check that IJ Network Scanner Selector EX is running.

If IJ Network Scanner Selector EX is running, its icon appears in the notification area on the desktop. Click \(\simeg \) to check the hidden icons as well.

>>> Note

- If the icon is not displayed in the notification area on the desktop, follow the procedure below to start.
 - Windows 8:

Click IJ Network Scanner Selector EX on the Start screen.

If **IJ Network Scanner Selector EX** is not displayed on the Start screen, select the **Search** charm, then search for "IJ Network Scanner Selector EX".

Windows 7/Windows Vista/Windows XP:

From the Start menu, click All Programs > Canon Utilities > IJ Network Scanner Selector EX > IJ Network Scanner Selector EX.

The icon appears in the notification area on the desktop, and the Scan-from-PC Settings screen appears. In that case, skip ahead to Step 3.

In the notification area on the desktop, right-click
 [™] (IJ Network Scanner Selector EX), then select Settings....

The Scan-from-PC Settings screen appears.

3. Select your scanner or printer from **Scanners**.

Normally, the MAC address of your scanner or printer is already selected after the network setup. In that case, you do not need to select it again.

>>> Important

- If multiple scanners exist on the network, multiple model names appear. In that case, you can select one scanner per model.
- 4. Click OK.

Setting for Scanning with IJ Scan Utility

To scan from IJ Scan Utility using a scanner or printer connected to a network, specify your scanner or printer with IJ Network Scanner Selector EX, then follow the steps below to change the connection status between it and the computer.

- 1. Start IJ Scan Utility.
- Select "Canon XXX series Network" (where "XXX" is the model name) for Product Name.

>>> Note

- For USB connection, select "Canon XXX series" (where "XXX" is the model name) for **Product Name**.
- 3. Click **Settings...** to use another scanner connected to a network.
- 4. Click (General Settings), then click **Select** in **Product Name**.

 The Scan-from-PC Settings screen of IJ Network Scanner Selector EX appears.

 Select the scanner you want to use and click **OK**.
- 5. In the Settings (General Settings) dialog box, click OK.

The IJ Scan Utility main screen reappears. You can scan via a network connection.

>>> Note

- If your scanner or printer does not appear, check the following, click **OK** to close the screen, then reopen it and try selecting again.
 - MP Drivers is installed
 - Network settings of your scanner or printer is completed after installing the MP Drivers
- Network communication between your scanner or printer and computer is enabled If your scanner or printer still does not appear, refer to "Problems with Network Communication" for your model from Home of the *Online Manual*.
