Please start by reading the Precaution on the reverse side of this cover.

Please see the user's guide for the printer for operating instructions for Card Photo Printer CP-10.
Precautions

Camera Body Temperature
If your camera is used for prolonged periods, the camera body may become warm. Please be aware of this and take care when operating the camera for an extended period.

About the LCD monitor
The LCD monitor is produced with extremely high-precision manufacturing techniques. With more than 99.99\% of the pixels operating to specifications, less than 0.01\% of the pixels may occasionally misfire or appear as black, red or green dots. This has no effect on the recorded image and does not constitute a malfunction.

Notice: Please ensure that you read and follow the handling and safety precautions on pages 5 to 9 of this guide before attempting to use the camera.

Video Format
Please set the camera’s video signal format to the one used in your region before using it with a TV monitor (p. 82).

Language Setting
Please see page 83 to change the language setting.

Charging the Date/Time Battery
• The camera has a built-in rechargeable lithium battery that maintains the date, time and other camera settings. This battery recharges when the main battery pack is inserted into the camera. When you first purchase the camera, place a charged battery pack in it or use the AC adapter kit (sold separately) for at least 4 hours to charge the date/time battery. It will charge even when the camera power is set to Off.
• If the Set Date/Time menu appears when the camera power is turned on, it means that the date/time battery charge is depleted. Recharge it as described above.

Please Read

Test Shots
Before you shoot images of subjects of importance to you, we strongly recommend that you shoot several trial images to confirm that you are operating the camera correctly. Please note that Canon Inc., its subsidiaries and affiliates, and distributors of its digital cameras are not liable for any consequential damages arising from any malfunction of the Canon digital camera or CompactFlash™ card (CF card) resulting in the failure of an image to be recorded or to be recorded in a format that is machine sensible.

Warning Against Copyright Infringement
Please note that Canon digital cameras are intended for personal use and must be used in a manner that respects international and domestic copyright laws and regulations. Please be advised that in certain cases the copying of images from performances, exhibitions, or commercial properties by means of a camera or other device may contravene copyright or other legal rights even if the image was recorded for personal use.

Warranty Limitations
This camera’s warranty is only effective in the country of sale. If a problem arises while the camera is in use abroad, please convey it back to the country of sale before proceeding with a warranty claim to a Canon Customer Support Help Desk.

Safety Precautions

• Before using the camera, please ensure that you have read and understood the safety precautions described below. Always ensure that the camera is operated correctly.

• The safety precautions noted on the following pages are intended to instruct you in the safe and correct operation of the camera and its accessories to prevent injuries or damage to yourself, other persons and equipment.

• In the next few pages, the term “equipment” refers primarily to the camera, battery charger and optional compact power adapter.
**WARNINGS**

- Do not aim the camera directly into the sun or at other intense light sources which could damage your eyesight.

- Do not trigger the flash in close proximity to human or animal eyes. Exposure to the intense light produced by the flash may damage eyesight. In particular, remain at least one meter (39 inches) away from infants when using the flash.

- Store this equipment out of the reach of children and infants. Accidental damage to the camera or batteries by a child could result in serious injury. In addition, placement of the wrist strap around the child’s neck could result in asphyxiation.

- Do not attempt to disassemble or alter any part of the equipment that is not expressly described in this guide. Disassembly or alteration may result in high-voltage electrical shock. Internal inspections, alterations and repairs should be conducted by qualified service personnel authorized by your camera distributor or a Canon Customer Support Help Desk.

- To avoid the risk of high-voltage electrical shock, do not touch the flash portion of the camera if it has been damaged. Similarly, never touch internal portions of the equipment which become exposed as a result of damage. There is a risk of high-voltage electrical shock. Please take the first opportunity to consult your camera distributor or a Canon Customer Support Help Desk.

- Stop operating the equipment immediately in the event that it emits smoke or noxious fumes. Failure to do so may result in fire or electrical shock. Immediately turn the camera’s power off and remove the camera battery or unplug the power cord from the electrical outlet. Confirm that smoke or fume emissions have ceased. Please consult your camera distributor or the closest Canon Customer Support Help Desk.

- Stop operating the equipment if it is dropped or the casing is damaged. Failure to do so may result in fire or electrical shock. Immediately turn the camera’s power off and remove the camera battery or unplug the power cord from the electrical outlet. Please consult your camera distributor or the closest Canon Customer Support Help Desk.
• Do not allow the equipment to come into contact with, or become immersed in, water or other liquids. Do not allow liquids to enter the interior. The camera has not been waterproofed. If the exterior comes into contact with liquids or salt air, wipe it dry with a soft, absorbent cloth. In the event that water or other foreign substances enter the interior, immediately turn the camera’s power off and remove the camera battery or unplug the power cord from the electrical outlet. Continued use of the equipment may result in fire or electrical shock. Please consult your camera distributor or the closest Canon Customer Support Help Desk.

• Do not use substances containing alcohol, benzene, thinners or other flammable substances to clean or maintain the equipment. The use of these substances may lead to fire.

• Do not cut, damage, alter or place heavy items on the power adapter cord. Any of these actions may cause an electrical short circuit, which may lead to fire or electrical shock. Replace a broken or damaged power adapter cord.

• Do not handle the power cord if your hands are wet. Handling it with wet hands may lead to electrical shock. When unplugging the cord, ensure that you hold the solid portion of the plug. Pulling on the flexible portion of the cord may damage or expose the wire and insulation, creating the potential for fires or electrical shocks.

• Use of power sources not expressly recommended for this equipment may lead to overheating, distortion of the equipment, fire, electrical shock or other hazards. Use only the recommended power accessories.

• Do not place the batteries near a heat source or expose them to direct flame or heat. Neither should you immerse them in water. Such exposure may damage the batteries and lead to the leakage of corrosive liquids, fire, electrical shock, explosion or serious injury.

• Do not attempt to disassemble, alter or apply heat to the batteries. There is serious risk of injury due to an explosion. Immediately flush with water any area of the body, including the eyes and mouth, or clothing, that comes into contact with the inner contents of a battery. If the eyes or mouth contact these substances, immediately flush with water and seek medical assistance.

• Avoid dropping or subjecting the batteries to severe impacts that could damage the casings. It could lead to leakage and injury.

• Do not short-circuit the battery terminals with metallic objects, such as key holders. It could lead to overheating, burns and other injuries. Use the supplied battery case to transport or store the battery pack.
• Before you discard a battery, cover the terminals with tape or other insulators to prevent direct contact with other objects. Contact with the metallic components of other materials in waste containers may lead to fire or explosions. Discard the batteries in specialized waste facilities if available in your area.

• Use of batteries not expressly recommended for this equipment may cause explosions or leaks, resulting in fire, injury and damage to the surroundings. Use only recommended batteries and accessories.

• Use only the recommended battery charger to charge the Battery Pack NB-1L rechargeable batteries. Use of chargers not expressly recommended may result in overheating, distortion, fire or electrical shock.

• Disconnect the battery charger or the compact power adapter from both the camera and electrical outlet after recharging and when the camera is not in use to avoid fires and other hazards.

• The camera terminal of the battery charger cord and the compact power cord is designed for exclusive use with your camera. Do not use it with other products or batteries. There is a risk of fire and other hazards.

⚠️ CAUTIONS

• Avoid using, placing or storing the equipment in places subject to strong sunlight or high temperatures, such as the dashboard or trunk (boot) of a car. Exposure to intense sunlight and heat may cause the batteries to leak, overheat or explode, resulting in fire, burns or other injuries. High temperatures may also cause deformation of the casing. Ensure that there is good ventilation when using the compact power adapter to charge the battery pack or power the camera.

• Do not store the equipment in humid or dusty areas. Storage in such areas could lead to fire, electrical shock or other damage.

• Be careful not to bang the camera or subject it to strong impacts or shocks that could lead to injury or damage the equipment when wearing or holding it by the wrist strap.

• Be careful not to cover the flash with your fingers when shooting. In addition, do not touch the surface of the flash after taking several pictures in rapid succession. Either action could result in burns.

• If your camera is used for prolonged periods, the camera body may become warm. Please take care when operating the camera for an extended period as your hands may experience a burning sensation.
Preventing Malfunctions

Avoid Strong Magnetic Fields
Never place the camera in close proximity to electric motors or other equipment generating strong electromagnetic fields. Exposure to strong magnetic fields may cause malfunctions or corrupt image data.

Avoid Condensation Related Problems
Moving the equipment rapidly between hot and cold temperatures may cause condensation (water droplets) to form on its external and internal surfaces. You can avoid this by placing the equipment in an airtight, resealable plastic bag and letting it adjust to temperature changes slowly before removing it from the bag.

If Condensation Forms Inside the Camera
Stop using the camera immediately if you detect condensation. Continued use may damage the equipment. Remove the CF card and battery or power cord (if connected) from the camera and wait until the moisture evaporates completely before resuming use.

Extended Storage
When not using the camera for extended periods of time, remove the battery pack and store the equipment in a safe place. Storing the camera for extended periods with a battery pack installed will run down the battery pack and may damage the camera. Please note, however, that the date, time and other camera settings may reset to the default settings if the battery pack has been removed for more than three weeks. Follow the instructions in this guide to reset the desired settings.
Quick Start

1 Charge the Battery Pack (→ p. 15)
   Place the battery pack in the battery charger and plug the charger into the electrical outlet. The charge indicator will glow orange while the battery pack is charging and change to green when it is fully charged.
   • Please note that the battery charger shape varies between regions.

2 Install the Battery Pack (→ p. 17)
   Slide the battery cover to open it and press the battery lock while inserting the battery pack all the way in.

3 Install a CF Card (→ p. 20)
   Slide the lock down and open the CF card slot cover. Insert the CF card.

4 Turn the Power On (→ p. 24)
   Press and hold the main switch until the green indicator blinks.

• If the Set Date/Time menu appears, set the date and time (p. 22).
5 Slide the mode switch to (shooting) (→ p. 25).

6 Focus (→ p. 32)
Aim the camera at the subject and press the shutter button halfway. The camera will focus automatically and beep twice.

7 Shoot (→ p. 32)
Press the shutter button down fully. One beep will sound when the image has been shot.

8 View the Image (→ p. 33)
The image you shoot will appear in the LCD monitor for approximately 2 seconds. If you keep the shutter button held down and press the SET button, the image will remain displayed even if you release the shutter button.

• To view all of the images that you have shot, please read the Replaying section (p. 52).
• After you finish using the camera, press the main switch to turn off the power.

Charging the Battery Pack

Recharge the battery pack with battery charger CB-2LS or CB-2LSE the first time you use the camera or when the “Change the battery pack” message is displayed.

**Battery charger model names and types vary by region.**

- Insert the battery pack all the way into the battery charger and plug the charger into an electrical outlet.
- The charging indicator will glow orange while the battery pack is charging. It will change to a steady green when the charge is complete.
- After charging, unplug the battery charger and remove the battery pack from it.

- Since this is a lithium ion battery pack, you need not completely use or discharge it before recharging.
- It takes approximately 130 minutes to fully charge the battery pack from a fully discharged state (based on standard Canon testing conditions). Please charge it at an ambient temperate ranging between 5 and 40 ºC (41 and 104 ºF).
- Charge times may vary according to the ambient temperature and the charge state of the battery pack.

- To protect and prolong the life of the battery pack, do not charge it for longer than 24 hours at a time.
Handling Precautions

• Do not rapidly overturn or wave the battery charger around when the battery pack is in it. There is a danger of the battery pack flying out.
• At low temperatures, the battery pack performance may be reduced and the low battery icon may appear earlier than usual. Under these conditions, resuscitate the battery pack by warming it in a pocket immediately before use. However, ensure that there are no metallic items in the pocket that could cause the battery pack to short circuit, such as key holders, etc.
• Do not place anything, such as tablecloths, carpets, bedding or cushions, on top of the battery charger while it is charging. Heat will build up and could result in a fire.
• Do not charge batteries other than Battery Pack NB-1L in this charger.
• The battery pack continues to discharge a minimal portion of its power while installed in the camera, even with the camera power off or inserted into the battery charger. This will shorten battery life. To conserve the battery pack, store it in its case in a cool, dry place. Recharge it fully before using it again.
• If the performance of the battery pack diminishes substantially even when it is fully charged, the battery pack should be replaced.
Installing the Battery Pack

Install Battery Pack NB-1L (supplied) as shown below.

• Please recharge the battery pack (p. 15) before you use it for the first time.

1. Slide the battery cover in the direction of the arrows.

2. Press the battery lock while inserting the battery pack all the way in until the lock clicks.
   • To remove the battery pack, press the battery lock and pull the battery pack out.

3. Slide the battery cover closed.

• When the camera’s indicator flashes green, do not turn off the power or open the battery cover. The camera is writing, reading, erasing or transmitting an image to or from the CF card.
• Remove the battery pack from the camera when the camera is not in use. Please note, however, that the date, time and other camera settings may reset to the default settings if the battery pack has been removed for more than three weeks.

• Please use a household power source for extended use of the camera (p. 19).
Preparing the Camera

Battery Performance

<table>
<thead>
<tr>
<th>Battery Pack NB-1L (fully charged)</th>
<th>LCD Monitor On</th>
<th>LCD Monitor Off</th>
<th>Replay Time</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Approx. 120 shots</td>
<td>Approx. 270 shots</td>
<td>Approx. 85 min.</td>
</tr>
</tbody>
</table>

- The actual performance may vary from the above data according to the shooting conditions and the shooting mode.
- Excludes movie data.
- At low operating temperatures, the battery performance may drop and the low battery icon may appear sooner than at high temperatures. To improve performance at these temperatures, warm the battery in your pocket just before using it in the camera.

<Test Conditions>

Shooting: Room temperature (23°C, 73°F), alternating between wide angle and telephoto every 20 seconds, flash used one in four shots, power turned off and on again after every eighth shot

Replay: Room temperature (23°C, 73°F), continuous replay at 3 seconds per image

Battery Pack Charge

The following icons and messages will display when the charge of the battery pack is low.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>📋</td>
<td>Battery pack charge is low. Recharge it as soon as possible before it is required for an extended period. When the LCD monitor is off, this icon will display when you press the 📄, 📈/📸 or 📈/.motion button.</td>
</tr>
<tr>
<td>Change the battery pack</td>
<td>Battery charge is insufficient to operate the camera. Replace the battery pack immediately.</td>
</tr>
</tbody>
</table>
Using a Household Power Source

It is best to power the camera with AC Adapter Kit ACK500 (sold separately) when you are using it for long periods of time or connecting it to a computer.

• Turn the camera power off before connecting or disconnecting the AC adapter.

• Connect the power cord to the compact power adapter first and then plug the other end into the electrical outlet.

• Open the battery cover and press the battery lock in the direction shown while inserting DC Coupler DR-500. Insert the DC coupler all the way in until the battery lock clicks. Slide the battery cover closed.

• Open the DC coupler terminal cover and attach the cord to the DC terminal.
• After you have finished using the camera, unplug the AC adapter from the electrical outlet.

• Use of an AC adapter kit other than ACK500 may cause a malfunction in the camera or kit.
Installing a CF Card

Turn the camera power off and insert the CF card with the following procedures.

1. Slide the lock down and open the CF card slot cover.

2. Insert the CF card until the slot’s eject button fully extends. Close the CF card slot cover.

To remove the CF card, push the eject button and pull the CF card out.

• When the camera’s indicator flashes green, do not turn off the power or remove the CF card. The camera is writing, reading, erasing or transmitting an image to or from the CF card.
• Please note that CF cards from other manufacturers, or CF cards which have been edited with application software using other formats, may not operate correctly in the camera.
Handling Precautions for CF Cards

- CF cards are high-precision electronic devices. Do not bend them, apply force to them, or subject them to shocks or vibration.
- Do not attempt to disassemble or alter a CF card.
- Moving a CF card rapidly between temperature extremes will cause condensation to form in the card and lead to a malfunction. To avoid condensation, place the CF card in a sealed plastic bag before moving it into a different temperature zone and allow it to adjust slowly to the new temperature. If condensation forms on the CF card, store it at room temperature until the water droplets have evaporated naturally.
- Place the CF card in the supplied case for storage.
- Do not use or store CF cards in the following types of location.
  - Location subject to dust or sand
  - Locations subject to high humidity and high temperatures

</table>

- These figures reflect standard shooting conditions established by Canon. Actual totals may vary according to the subject, shooting conditions and shooting mode.
- The maximum length of a movie clip recording is approximately: 4 seconds ( licens ), 10 seconds ( licens ) or 30 seconds ( licens ). The times shown are the maximum continuous recording times.
- L (Large), M (Medium), S (Small), 640, 320 and 160 indicate the recording resolution.
- (Superfine), (Fine) and (Normal) indicate the compression setting.
Setting the Date and Time

• The Set Date/Time menu will appear the first time the camera power is turned on or whenever the built-in rechargeable lithium battery charge is low. Start from Step 5 to set the date and time.

1. Press and hold the main switch until the green indicator blinks.

2. Press the button several times until the Rec. menu displays (p. 30).

3. Use the or button to select the icon.

4. Use the or button to select the icon.

5. The Set Date/Time menu will display.

- Select a field (month, day, year, hour, minutes and date format) with the SET button.
- Use the or button to change the value in a field.
- The factory default for the date format in some regions may differ from that shown.
• After you select the date format, the date format will take effect when you press the SET button.

• The LCD monitor will return to the shooting mode.

• Please note that the date and time settings may reset to the default settings if the camera battery has been removed for more than three weeks. Reset them when this occurs.

**Attaching the Wrist Strap**

Thread the small loop of the wrist strap through the strap holder on the camera and pull the large loop through the small loop until the small loop fits snugly against the strap holder.

• Be careful not to wave the camera about or catch it on other items when dangling it from the wrist strap.
Basic Functions

Turning the Power On/Off

Press and hold the main switch until the green indicator blinks.
• The lens will extend when the mode switch is set to •.
• The lens will retract approximately 1 minute after the mode switch is set to • from •.
• The LCD monitor will turn on regardless of its On/Off status when the mode switch is set to •.
Press the main switch again to turn off the power.

• The Set Date/Time menu will appear the first time the camera is turned on. Please set the date and time (p. 22).
• If the auto power down function activates, press the main switch again to restore power.

Auto Power Down Function

The camera is equipped with an auto power down function (p. 81). It will power down when the auto power down function is set to On under the following circumstances.
• Shooting: shuts down approximately 3 minutes after the last action.
• Replaying: shuts down approximately 5 minutes after the last action (excluding auto replay mode).
• Connected to Card Photo Printer CP-10 (optional): shuts down approximately 5 minutes after the last action involving the camera or printer.
• Connected to a computer: (auto power down always active) a warning message displays on the computer approximately 5 minutes after the last action and the camera shuts down after an additional 1 minute without action.
Switching between the Shooting / Replay Modes

**Shooting**
Slide the mode switch to the 📸 position.

**Replay**
Slide the mode switch to the ⏯️ position.
- You should also slide the mode switch to ⏯️ to print an image with Card Photo Printer CP-10 (optional) (p. 70).
- You should also slide the mode switch to ⏯️ to download or view images on the computer (p. 89).

- The ⏯️ (direct print) icon will display in the LCD monitor when the connection to Card Photo Printer CP-10 (optional) is complete.
- The LCD monitor will shut off and the indicator will glow green when the connection to a computer is complete.
Using the Viewfinder

This camera is equipped with an optical viewfinder.

Align the square brackets (autofocus metering field) inside the viewfinder on the primary subject to compose the image.

About the Autofocus Function

This camera employs AiAF (artificial intelligence autofocus) technology which uses a broad metering field to calculate the focal distance with high precision. It delivers a crisp focus even when the photographic subject is slightly off-center.

Using the Focus Lock

The following types of subject may not be suited to autofocus photography. Use the focus lock in these situations.

- Subjects with extremely low contrast to the surroundings
- Subjects with extremely bright objects at the center of the composition
- Subjects that are moving quickly
- Subjects through glass

Try to shoot as close to the glass as possible to reduce the chances of light reflecting back off the glass.

How to Use the Focus Lock

1. Aim the camera so that a subject at the same focal distance as the main subject is centered in the brackets in the optical viewfinder.
2. Press the shutter button halfway and wait until two beeps sound.
3. Re-aim the camera to compose the shot as desired and press the shutter button all the way.
Using the LCD Monitor

The LCD monitor can be used to compose images while shooting, adjust settings menus and replay images.

- The image in the LCD monitor will darken in strong sunlight or bright light. This does not constitute a malfunction.

Shooting Mode (Mode switch set to 📸)

- Pressing the DISP button turns the LCD monitor on or off.

- The LCD monitor setting (On or Off) is saved by the camera when the power is turned off so that the same setting is automatically available when the power is turned on again. However, the setting may be lost when the power has been turned off after the “Change the battery pack” message has displayed, while the LCD monitor was on in shooting mode.

- In macro mode, the parallax phenomenon may cause images composed with the viewfinder to be off-center. Use the LCD monitor to compose close-ups in macro mode (p. 41).

- Set the flash to On or affix the camera to a tripod when the upper indicator flashes orange and the camera blur warning icon (🚫) appears in the LCD monitor after the metering preparations are complete.
Replay Mode (Mode switch set to ▶)

- The LCD monitor will turn on when the mode switch is set to the ▶ position.
- In replay mode, pressing the DISP button cycles between display modes.

Single Image Replay ............ Standard → Detailed → No Display
Index Replay (9 Images) .................. Standard → No Display

Information Displayed on the LCD Monitor

Shooting Mode

In shooting mode, information about the current settings and remaining image capacity will display on the LCD monitor for approximately six seconds when the actions below are taken, regardless of whether the LCD monitor is set to On or Off.

While this information is displayed, you may set the flash, continuous mode, self-timer, macro and infinity settings.

- The power is turned on.
- The DISP, , , or button is pressed.
- The camera settings are changed.
- The Rec. menu is closed.
- The shutter button has been pressed and a shot has been taken.
  (LCD monitor must be on)

The resolution, but not compression, shows in movie mode.

Remaining Image Capacity
(Recordable seconds remaining for movies)

- The image information may not display correctly if images shot with this camera are replayed on other cameras or images from other cameras are replayed on this camera.
Basic Functions

LCD Monitor Menus / Switching between Display Modes

**Shooting (Mode switch set to 📸)**
The following menus will show on the LCD monitor according to the selected shooting mode.

- **Auto**

- **Manual**

- **Stitch Assist**

- **Movie**

**Replay (Mode switch set to 🎬)**
You can switch between display modes with the zoom lever.

- **Zoomed View**
- **Entire Image (Single Image Replay)**
Basic Functions

Switches between Sets of Nine Images
Displays Nine Images (Index Replay)

Displays Nine Images (Index Replay)
Switches between Sets of Nine Images

* Closes the Setup menu and prepares the camera for shooting.
**Pressing the Shutter Button**

The shutter button features a two-stage action.

**Pressing Halfway**

The camera uses the first stage to automatically set the exposure, autofocus and white balance. When it has finished metering, two beeps sound and the upper indicator glows green. When the flash is used, the indicator glows orange when the flash is ready to fire. A flashing orange indicator warns of insufficient light and the risk of camera blur.

In macro mode, the lower indicator glows yellow.

**Pressing Fully**

Pressing the shutter button down fully activates the shutter and causes one beep to sound. While the image is being recorded to the CF card, the indicator flashes green.

- Recorded images are temporarily stored in the camera’s internal memory and then written to the CF card. The next image can be recorded immediately after the first as long as sufficient internal memory is available.
Reviewing an Image Immediately after Recording It

Images display in the LCD monitor (regardless of its On/Off status) for 2 seconds immediately after recording even if you release the shutter button. Images can also be reviewed with the following procedures.

**Continuing to Press the Shutter Button Fully**
If you continue to press the shutter button fully after shooting, the image will display until the button is released.

**Pressing the SET Button**
If you press the SET button while continuing to press the shutter button fully, it will continue to display even when you release the shutter button. To cancel the review, press the shutter button halfway.

• You can erase an image right away while it is displayed (p. 52).
Changing the Default Review Setting

The default review time is approximately 2 seconds. This can either be turned off or set to approximately 10 seconds.

1. Display the Rec. menu (p. 77)

2. SET

3. SET

- Use the or button to select the icon.
- Use the or button to select Off, 2 sec. or 10 sec.
- No image will display when the review function is set to Off unless you continue to press the shutter button fully after shooting.
- With the 2- or 10-second options, the image will display for the specified time even if the shutter button is released right after shooting.
- With the 2- or 10-second options, you can display the image for longer than the specified time as long as the shutter button is held down continuously.
- You can shoot another image even while an image is displayed.

- is not available in the modes.
Adjusting the Zoom (Angle of View)

The zoom can be adjusted to any setting in the 35 to 70 mm range in 35 mm film equivalent terms.

Telephoto/Wide Angle

Pressing 📷 (telephoto) on the zoom lever zooms in, making the subject appear larger in the composition.

Pressing 📃 (wide angle) on the zoom lever zooms out, making the subject appear smaller in the composition.

Digital Zoom

When the LCD monitor is on, you can digitally zoom in on a subject with the zoom lever once it is at the maximum optical telephoto setting. Images can be zoomed up to 5 times, which combines the effect of the optical zoom.

Press 📷 on the zoom lever until it reaches the maximum telephoto setting and stops.

Press 📷 on the zoom lever again to further zoom the image.

Press 📃 on the zoom lever to zoom back out.

• Please note that the image appears grainier, the more the image is digitally zoomed.

• The digital zoom is not available when the LCD monitor is set to Off or the shooting mode is set to 📸, 🎥 or 🚩.
Selecting a Shooting Mode

The camera features the following shooting modes.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto</td>
<td>Most settings are automatically selected by the camera.</td>
</tr>
<tr>
<td>Manual</td>
<td>The exposure compensation, white balance and other settings can be manually selected.</td>
</tr>
<tr>
<td>Stitch Assist</td>
<td>Images are shot in overlapping series to create single panoramic images.</td>
</tr>
<tr>
<td>Movie</td>
<td>Shoots movie clips.</td>
</tr>
</tbody>
</table>

- Use the ◀ or ▶ button to select a shooting mode.

- The settings selected for each shooting mode remain effective even when you switch between shooting modes. When the power is turned off, the settings are also retained for certain shooting modes, but not for others (p. 51).
Changing Resolution/Compression Settings

Still image resolution and compression settings and movie resolution settings can be adjusted to suit your requirements. Resolution settings get progressively higher ranging from the S (Small) and M (Medium) to the L (Large) settings. Use a high resolution setting to obtain the best quality for printing an image at a large size, but select a lower one to print on small labels, to send images by email or to fit more images on a CF card. Compression settings yield progressively higher image quality as one switches from the [ Normal] and [ Fine] to the [ Superfine] setting.

<table>
<thead>
<tr>
<th>Still Image Resolution</th>
<th>Compression</th>
</tr>
</thead>
<tbody>
<tr>
<td>L (Large) 1600 x 1200 pixels</td>
<td>S Superfine</td>
</tr>
<tr>
<td>M (Medium) 1024 x 768 pixels</td>
<td>F Fine</td>
</tr>
<tr>
<td>S (Small) 640 x 480 pixels</td>
<td>N Normal</td>
</tr>
</tbody>
</table>

The following resolutions are available for movies.

<table>
<thead>
<tr>
<th>Movies Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>640 640 x 480 pixels</td>
</tr>
<tr>
<td>320 320 x 240 pixels</td>
</tr>
<tr>
<td>160 160 x 120 pixels</td>
</tr>
</tbody>
</table>

1. Select a Shooting Mode (⇒ p. 36)

- Set the shooting mode to [ ], [ ], [ ], [ ] or [ ].

[ ] cannot be adjusted in [ ] mode.

2. Press the MENU button repeatedly until the Rec. menu appears (p. 30).

- Use the [ ] or [ ] button to select [ ] or [ ] for still images or [ ] for movies.

Resolution (Still Images)
Select [1600 x 1200], [1024 x 768] or [640 x 480].
### Resolution (Movies)
Select [640 x 480], [320 x 240] or [160 x 120].

### Compression
Select [Superfine], [Fine] or [Normal].

- Use the << or >> button to select a setting.
- The LCD monitor will return to the shooting mode.

## Approximate Image Sizes

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Compression</th>
</tr>
</thead>
<tbody>
<tr>
<td>![L](1600 x 1200 pixels)</td>
<td>957 KB</td>
</tr>
<tr>
<td>![M](1024 x 768 pixels)</td>
<td>450 KB</td>
</tr>
<tr>
<td>![S](640 x 480 pixels)</td>
<td>208 KB</td>
</tr>
<tr>
<td>![Movies](320 x 240 pixels)</td>
<td>900 KB/s</td>
</tr>
<tr>
<td>![Movies](160 x 120 pixels)</td>
<td>380 KB/s</td>
</tr>
</tbody>
</table>

- These figures reflect standard shooting conditions established by Canon. Actual totals may vary according to the subject and shooting conditions.

- Please see page 21 for the available CF cards and their capacities.
### Using the Flash

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red-Eye Reduction Auto</td>
<td>The main flash may fire automatically as required by the light level. The red-eye reduction lamp fires whenever the flash fires.</td>
</tr>
<tr>
<td>Auto</td>
<td>The flash fires automatically as required by the light level.</td>
</tr>
<tr>
<td>On</td>
<td>The flash fires with every shot.</td>
</tr>
<tr>
<td>Off</td>
<td>The flash will not fire.</td>
</tr>
<tr>
<td>Slow-Synchro</td>
<td>The flash timing is adjusted to slow shutter speeds. This reduces the chance that the background will be dark when shots are taken at night or in rooms with artificial lighting. The red-eye reduction lamp fires with each shot. Use of a tripod is recommended.</td>
</tr>
</tbody>
</table>

1. **Select a Shooting Mode** ([p. 36](#))

   - Set the shooting mode to 📸, 📸, 📸 or 📸.

<table>
<thead>
<tr>
<th>📸</th>
<th>📸</th>
<th>📸</th>
<th>📸</th>
</tr>
</thead>
<tbody>
<tr>
<td>📸</td>
<td>✸</td>
<td>✗</td>
<td>✗</td>
</tr>
<tr>
<td>📸</td>
<td>✸</td>
<td>✗</td>
<td>✗</td>
</tr>
<tr>
<td>📸</td>
<td>✗</td>
<td>✱</td>
<td>✗</td>
</tr>
<tr>
<td>📸</td>
<td>✗</td>
<td>✱</td>
<td>✗</td>
</tr>
<tr>
<td>✗</td>
<td>✱</td>
<td>✗</td>
<td>✗</td>
</tr>
</tbody>
</table>

   - Setting available.
   - ✱ Can be selected for first image only.

2. **Press the ✴ button to cycle through the flash settings.**

   - The flash can be fired when the upper indicator glows a steady orange.
   - The flash takes approximately 10 seconds to charge. Recharging time may vary with the state of the battery charge.
Please note that a slow shutter speed will be selected in dark places when the flash is set to off or slow-synchro. Be careful to avoid camera blur under these conditions.

- **Shooting in 📷 Mode**
  Be careful to hold the camera still to avoid camera blur.

- **Shooting in 📽, 🎥 or 🎯 Mode**
  Fix the camera to a tripod to shoot in the 📽, 🎥 or 🎯 mode since the shutter speed will be slower than in the 📷 mode. If an image is dark in 📷 mode, reshooting it in 📽 mode will make it brighter.

- The flash fires twice. A preparatory pre-flash is followed by the main flash. The exposure readings obtained from the subject with the pre-flash are used to set the optimal flash intensity for the main flash, which is used to shoot the image.

**Red-Eye Reduction**

- Light reflecting back from eyes can make them appear red when the flash is used in dark areas. Under these conditions, use the red-eye reduction mode. For this mode to be effective, the subject must be looking right at the red-eye reduction lamp. Try asking them to look directly at the lamp. Even better results can be obtained by shooting with the lens set to the wide angle, increasing the lighting in indoor settings or approaching closer to the subject.

- To improve the effect of the red-eye reduction lamp, the camera will not shoot for approximately 1 second after the shutter button is fully pressed. If you wish to shoot immediately, set the flash to any one of the auto, on or off settings.
Shooting Close-Ups/Infinity Shots

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Macro Mode</td>
<td>Use this mode to record subjects in the range of 10 to 57 cm (3.9 in. to 1.9 ft.) from the lens tip when at maximum wide angle and in the range of 27 to 57 cm (10.6 in. to 1.9 ft.) when at the maximum telephoto setting.</td>
</tr>
<tr>
<td>Infinity Mode</td>
<td>Use this mode to record landscapes and distant objects. It can also be used for compositions combining both near and distant objects.</td>
</tr>
</tbody>
</table>

1. Select a Shooting Mode (⇒ p. 36)

   • Set the shooting mode to 📸, 📸, 📸, 📸 or 📸.

<table>
<thead>
<tr>
<th>📸</th>
<th>📸</th>
<th>📸</th>
<th>📸</th>
</tr>
</thead>
<tbody>
<tr>
<td>✒</td>
<td>✒</td>
<td>✙</td>
<td>✒</td>
</tr>
<tr>
<td>✒</td>
<td>✒</td>
<td>✙</td>
<td>✒</td>
</tr>
</tbody>
</table>

   • Setting available.
   • Selectable for first image only.

2. Display ✒ or ✒.

   • Use the LCD monitor to compose close-ups in macro mode since the parallax phenomenon may cause images composed with the optical viewfinder to be off-center.
   • The exposure may not be optimal when the flash is used in macro mode in the range of 10 to 27 cm (3.9 to 10.6 in).
1 Select a Shooting Mode (→ p. 36)

2

• Set the shooting mode to 📸.

• Display 📸.

• The camera will shoot continuously at approximately 2.5 images per second* (Large and Fine settings with the LCD monitor off) while the shutter button is held down. Recording ceases when the shutter button is released.

  * This figure reflects standard shooting conditions established by Canon. Actual figures may vary according to the subject and shooting conditions.

• Images may be recorded consecutively in continuous mode until the CF card is full.

• The interval between shots lengthens slightly when the camera’s internal memory becomes full.

• Since the flash requires time to recharge, the interval between shots lengthens when the flash is used.
 usando el temporizador

1. Selecciona un modo de disparo (p. 36)
   • Establece el modo de disparo en , , o .

2. 
   • Muestra .
   • Cuando se presiona el botón de disparo, el indicador del temporizador parpadeará y el disparo activará después de 10 segundos. El indicador del temporizador parpadeará a un ritmo más rápido dos segundos antes de que se tome la imagen.

   • Para cancelar en medio, presiona el botón .  
   • Consulta el paso 4 en la página 49 para aprender a detener la grabación de un clip de vídeo.
Adjusting the Exposure Compensation

An image can be under-exposed if the subject is backlit or positioned in a bright location. Lights in night shots may also appear too bright. To avoid under-exposing the image, use the exposure compensation function.

1. Select a Shooting Mode (⇒ p. 36)
   - Set the shooting mode to [ ], [ ], [ ] or [ ].

2. Press the MENU button repeatedly until the Exposure Compensation menu appears (p. 30).
   - Use the [ ] or [ ] button to select a setting.
   - You can confirm the effect of the exposure compensation setting in the LCD monitor image when the LCD monitor is on.
   - A shot can be taken immediately after. The menu will reappear after the shot, allowing you to adjust the setting.
Setting the White Balance

Setting the white balance to match the dominant light source when shooting will adjust the coloring of the image (excluding **BW** images) to the correct settings for the prevailing light conditions.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto</td>
<td>The camera sets the white balance automatically.</td>
</tr>
<tr>
<td>Daylight</td>
<td>Use this setting for recording outdoors on a bright day.</td>
</tr>
<tr>
<td>Cloudy</td>
<td>Use this setting to record in shade or under overcast or twilight.</td>
</tr>
<tr>
<td>Tungsten</td>
<td>Use this setting for recording under tungsten lighting.</td>
</tr>
<tr>
<td>Fluorescent</td>
<td>Use this setting to record under fluorescent lighting.</td>
</tr>
<tr>
<td><strong>BW</strong></td>
<td>Black and White Use this setting to record black and white images.</td>
</tr>
</tbody>
</table>

1. **Select a Shooting Mode** *(→ p. 36)*

   - Set the shooting mode to **Auto**, **Daylight**, **Cloudy**, **Tungsten**, **Fluorescent**, or ****.

2. **Press the **MENU** button repeatedly until the White Balance menu appears (p. 30).**

   - Use the or button to select a setting.
   - You can confirm the effect of the setting adjustment in the LCD monitor image when the LCD monitor is on.
   - A shot can be taken immediately after. The menu will reappear after the shot, allowing you to adjust the setting.
Shooting in Stitch Assist Mode

Stitch Assist mode can be used to shoot images, which overlap, and which can later be merged to create one panoramic image on a computer.

The overlapping seams of several adjacent images can be joined into a single panoramic image.

• To merge the images on the computer, use PhotoStitch, one of the supplied programs.

Framing a Subject

The PhotoStitch program detects the overlapping portions of adjoining images and merges them. When shooting, try to include a distinctive item (landmark) in the overlapping portions.

• Compose each frame so that it overlaps 30 to 50% of the adjoining image. Try to keep the vertical misalignment to less than 10% of the image height.
• Do not include moving items in the overlap.
• Do not try to stitch images that include both distant and close items. Objects may appear warped or doubled up.
• Make the brightness in each image consistent. The final image will appear unnatural if the difference in brightness is too great.

For good results, pan (swivel) the camera to take successive shots.

To shoot close-ups, slide the camera over the subject, keeping it parallel as you move.

**Shooting**

Images can be shot in two sequences.

<table>
<thead>
<tr>
<th></th>
<th>Left → Right</th>
<th>Left to right horizontally</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Left ← Right</td>
<td>Right to left horizontally</td>
</tr>
</tbody>
</table>

1. **Select a Shooting Mode** ([p. 36])

   - Set the shooting mode to [ ] or [ ].
   - The LCD monitor will turn on.

2. **Set**

   - Shoot the first frame in the series.
   - The exposure and white balance settings are set and locked with the first image. Successive images use the same settings.
4 Shoot the second image

- Compose the second image so that it overlaps a portion of the first and shoot.

- Pressing the ◄ or ► button allows you to check the images that have been recorded.

- Minor discrepancies in the overlapping portions can be corrected when the images are stitched together.

5 Shoot the third image

- Repeat the procedure for additional images. A sequence may contain up to 26 images.

6 SET

- Press the SET button to close Stitch Assist mode.

- The zoom, flash (.AUTO/ON), self-timer, resolution, compression, exposure compensation, white balance and macro/infinity mode (W/A) settings can only be adjusted for the first image. Additional images from the second shot onward are shot with the same settings as the first.

- The digital zoom, certain flash settings (AUTO/ON) and continuous shooting mode cannot be used with the Stitch Assist mode.

- A TV monitor cannot be used when shooting in Stitch Assist mode.
Shooting a Movie

Use the movie mode to shoot movie clips.

1. Select a Shooting Mode (p. 36)
   - Set the shooting mode to ".
   - The LCD monitor will turn on.

2. • The available recording time (seconds) will display.
   • Press the shutter button fully to start recording images and sounds.
   • A red dot and recorded time (in seconds) will appear on the LCD monitor while recording is in process.

3. • The maximum length of a movie clip (at approximately 20 frames/second) is approximately 4 seconds (640), 10 seconds, (320) or 30 seconds (160) (according to standard Canon testing conditions). These times may vary with the subject and shooting conditions. Recording will automatically stop when the maximum time is reached or when the CF card runs out of free capacity.
   • Recording will stop when the shutter button is pressed again while a movie is recording.

   • Be careful not to touch the microphone while recording.
   • The exposure compensation, focus, white balance and zoom settings remained fixed at the values selected for the first frame.
   • After a clip is shot, the upper indicator will flash green while the clip is being written to the CF card. You cannot shoot until the flashing stops.
   • The digital zoom, flash, continuous shooting mode and compression settings cannot be selected for movies.
• Three resolution settings (640 x 480 pixels, 320 x 240 pixels, 160 x 120 pixels) are available for movies (p. 37).
• Sound is recorded monophonically.
• The beep will not sound in the middle of a movie clip recording.
• QuickTime 3.0 or a later version of this software is required to replay movie files (AVI file format, Motion JPEG compression format) on a computer.
## Functions Available in Each Shooting Mode

The chart below is a reference for the settings available for various shooting conditions. The settings selected in each shooting mode are saved when switching between shooting modes.

Replaying

Displaying Images Singly (Single Image Replay)

1. The last recorded image will appear in the display (single image replay).

2. Press the button to switch the display to the previous image. The button switches to the next image. Hold down the button to advance through the images more rapidly. Images will appear coarser at the faster speed.

Erasing Shortcut for the Displayed Image

1. Hold the SET button down and press the button while the image is displayed.
2. Use the button to select [OK].
3. Press the SET button.

• A TV can also be used to replay images (p. 84).
Zooming an Image

1. An image can be magnified approximately 2.5 times in the single image replay mode.

2. Press the ◄ or ► button to move the selection area left or right and hold the SET button while pressing the ◄ or ► button to move the selection area up or down.
   - Press ◄ on the zoom lever to return to single image replay mode.

• Movie clips cannot be magnified.
Displaying Images in Sets of Nine (Index Replay)

- The last recorded image will appear in the display (single image replay).

- A set of up to nine images will appear in the display (index replay).

- You can change the image selection with the or button. Pressing on the zoom lever displays the selected image in single image replay mode.

- You can use a shortcut to erase the selected image by holding the SET button and pressing the button (p. 52).
Switching between Sets of Nine Images

1

- Successive sets of nine images can be shown in the display.

2

- Press the button to display the previous set of nine images. The button displays the next set of nine.
- Pressing on the zoom lever restores the index replay mode.
Replaying Movies

Movie clips can be replayed with the following procedures.

1. Use the ▼ or ▼ button to select a movie.

2. Movies cannot be played in the index replay mode.

   - The movie images will play.
   - Pressing the ▼ or ▼ button during replay stops it and displays the previous or next image.
   - When the movie finishes, the last frame shows in the display.

Pausing/Resuming

1. Pressing the SET button pauses the replay. Pressing the SET button again resumes it.

- Frames may be dropped or the audio may break up if there are insufficient memory resources when movies are replayed on a computer.
- Movies can also be replayed on a TV. Both audio and visual recordings can be replayed when connected to a TV (p. 84).
- You can use a shortcut to erase the displayed movie by holding the SET button and pressing the ▼ button (p. 52).

- Movies and other clips shot with other cameras may not replay on this camera (List of Messages, p. 95).
Rotating Images in the Display

Images can be rotated 90° or 270° clockwise in the display.

1. 0° (Original)  
2. 90°  
3. 270°

- Use the left or right button to select the orientation.
- Cycle between the 90°/270°/0° orientation each time you press the SET button.
- Press the MENU button several times until the replay screen reappears.

- If an image has been rotated in the camera before being loaded onto a computer, the particular software in use will determine whether or not the rotation settings are retained.
- Movie clips cannot be rotated.
- Zooming rotated images reverses the rotation and displays the original orientation.
Automating Playback (Auto Play)

All of the images on a CF card can be displayed one-by-one automatically with the auto play function. Each image is displayed for approximately 3 seconds.

1. Use the or button to select .
2. The camera will read the images on the CF card and start auto play.

- As with the single image display mode, pressing the or button during auto play will advance through the images more rapidly (p. 52).
- The display interval may vary for some images.
- Movies play for the entire recorded interval.
Pausing and Resuming Auto Play

- Pressing the SET button temporarily pauses auto play. Press the SET button again to resume auto play.
- If the ‹ or › button is pressed while auto play is paused, the display can be switched to the previous or next image, respectively. Hold down the ‹ or › button to advance through the images more rapidly.

Stopping Auto Play

- Stop the auto play by pressing the MENU button several times until the LCD monitor returns to the standard replay mode.
Protecting Images

You can protect important images to prevent their accidental erasure.

1. Use the or button to select .

2. Use the or button to select an image. Press the SET button to protect it.

3. Pressing the SET button protects the image. If the SET button is pressed a second time, the protection is removed.

4. • Press the MENU button several times until the replay screen reappears.

• Please note that even protected images are erased when a CF card is reformatted.
Erasing Images

Erasing Images Singly

1. Please note that erased images cannot be recovered. Exercise adequate caution before erasing a file.
   • Protected images cannot be erased with this function.

2. Use the ◀ or ▶ button to select ☞.

3. Use the ◀ or ▶ button to select the image you wish to erase.

4. Use the ◀ or ▶ button to select [OK].
   • To cancel instead of erasing, select [Cancel].

Images can also be erased using a shortcut (p. 52). However, images cannot be erased while Card Photo Printer CP-10 (sold separately) is connected.
Erasing All Images

• Please note that erased images cannot be recovered. Exercise adequate caution before erasing a file.
• Protected images cannot be erased with this function.

• Use the ◀ or ▶ button to select 🗑️.

• Use the ◀ or ▶ button to select [OK].
• To cancel the command, select [Cancel].
Print Settings (DPOF Settings)

Images on a CF card can be individually selected for printing in a specified number of copies. The print type and date or file number printing options can also be selected. These settings are compatible with Digital Print Order Format (DPOF) standards so that images can be printed conveniently on DPOF compliant digital printers or at participating photo labs.

- After you set the DPOF settings, you can connect Card Photo Printer CP-10 (sold separately) and print images directly from the camera (p. 69). Please note that images with the print type set to [Index] cannot be printed on Card Photo Printer CP-10.

Displaying the Print Settings Menu

1. Use the " or " button to select .

2. Adjust the settings in the Print Settings menu in the following order.
   1. Set the Print Style (p. 64).
   2. Select Images for Printing (p. 65)

3. Select Reset if you wish to reset all settings (p. 68).
Setting the Print Style

The following settings can be selected.

<table>
<thead>
<tr>
<th>Print Type</th>
<th>Standard</th>
<th>Index</th>
<th>Both</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Prints one image per page.</td>
<td>Prints selected images at reduced size on a single sheet in an index format.</td>
<td>Prints the images in both standard and index formats.</td>
</tr>
</tbody>
</table>

- Date  
  Adds the date to the print.
- File No.  
  Adds the file number to the print.

1. Display the Print Order menu (➔ p. 63).

2. Use the ◀ or ▶ button to select [Set up].

- Use the ◀ or ▶ button to select [ ], [ ] or [ ].

(Print Type)

You may select [Standard], [Index] or [Both] options.

- Print settings cannot be set for movies.
- The ⚠ mark will display on images that have had print marks set by another DPOF-compliant camera. These settings will be overwritten by any settings set by your camera.
- The output of some printers or developing labs may not reflect the specified print settings.
Print Settings (DPOF Settings) 65

☑ (Date)
You may select either [On] or [Off].

☐ (File No.)
You may select either [On] or [Off].

• Use the < or > button to select a setting. Press the SET button.

• Press the MENU button several times until the replay screen reappears.

• The date is printed in the format selected in the date format field of the Set Date/Time menu (p. 22).

• The date and file number options cannot both be set to On when [Index] is selected as the print type.

Selecting Images for Printing

1
Display the Print Order menu (p. 63).

• Use the < or > button to select [Order].
The selection method will vary according to the print type (p. 64).

**Standard/Both**

- Use the < or > button to select an image.
- The zoom lever can be used to switch between the single and index replay (3 images) modes for image selection.
- Pressing the SET button displays the < > icon so that the number of print copies can be specified. Pressing the SET button a second time causes the < > icon to disappear and restores the image selection mode.
- Use the < or > button to select the number of copies. The maximum is 99 copies.
- Press the MENU button several times until the replay screen reappears.

Number of Print Copies
Index

3

4

5

• Use the ◄ or ► button to select an image.

• Pressing the SET button causes a check mark icon to appear. Pressing the SET button a second time deselects the image.

Check Mark for Index Printing

• Press the MENU button several times until the replay screen reappears.

• Images are printed in the order of the oldest image to the newest.
• When the print type is set to [Both] and both the date and file number are set to [On], only the file number will print on the index sheet.
Reseting Print Settings

Reseting the print settings removes them from all the selected images and resets the print type to [Standard], the date setting to [Off] and the file number setting to [Off].

1. Display the Print Order menu (→ p. 63)

2. Use the or button to select [Reset].

3. Use the or button to select [OK].

4. To cancel instead of resetting, select [Cancel].
The optional Card Photo Printer CP-10 can be used to print images directly and effortlessly from the camera. It can also print images marked with DPOF print settings.

**Connecting Card Photo Printer CP-10**

• Two direct interface cables are shipped with Card Photo Printer CP-10. Use the one with the symbol on its connectors.

• You are recommended to use a household power source (AC adapter sold separately) to power the camera when connecting it to a printer. When using a battery, ensure that it is fully charged. Monitor the battery charge closely when printing.

1. **To an Electrical Outlet**

   • Plug the power cable into the printer and then into an electrical outlet.

2. **Direct Interface Cable DIF-200**

   • Connect the direct interface cable to the printer.
   • Open the terminal cover on the camera and attach the direct interface cable to the Digital A/V Out terminal.
   • When detaching the cable, from the camera’s Digital A/V Out Terminal, always press the **PUSH** button on the connector.

Attach the cable so that the symbols on the camera and cable meet.
• After you connect the printer, slide the mode switch to and turn on the camera. If you switch from mode to mode when the camera power is already on, the lens will retract immediately.
• Please refer to the Card Photo Printer CP-10 manual for instructions on feeding paper or installing the ink cassette.
• All of the replay functions are available when the printer is connected, except for the following: replaying a movie, erasing images using the SET button and button shortcut, and setting a language using the SET and buttons.
• The (direct printer) icon will disappear from the upper left of the LCD monitor and the normal replay mode will be restored when the connection with the printer is canceled.

Printing
Printing the Displayed Image
A single copy of an image can be printed while it is displayed in single image replay or index replay.

1

• The icon will display when the printer is connected correctly.
• Select an image for printing.

2

• Use the or button to select [OK].
• Select [Style] if you wish to change the print style (p. 75).
• Select [Cancel] if you wish to stop printing.
Press the SET button to start printing.

The LCD monitor returns to the replay mode when the print concludes successfully.

Printing cannot be stopped in mid process.
Movie clips cannot be printed.

Printing Errors

Use the ▲ or ▼ button to select [Stop] or [Resume].

The [Resume] option does not display with some types of error. In that case, select [Stop].

Printing will stop or resume.
Printing with DPOF Print Settings
Card Photo Printer CP-10 can print images marked with DPOF print settings, excluding those with the print type set to [Index].

1. Display the Print Order menu (→ p. 63)

2. DPOF Print Setting
   - Use the \ or \ button to select [Print].
   - Current Print Style
     - Use the \ or \ button to select [OK].
     - Select [Style] if you wish to change the print style (p. 75).
     - Select [Cancel] if you wish to stop printing.
   - Printing will start.

3. • The LCD monitor returns to the replay mode when the print concludes successfully.
Stopping Printing

1. If the SET button is pressed while printing is underway, a confirmation message will appear.

   - Use the ▲ or ▼ button to select [OK].
   - Pressing the SET button stops the print queue after the image currently printing is finished. The LCD monitor returns to the replay mode.

Resuming Printing

If printing is stopped with images left in the print queue, the remaining images can be printed with the following procedures.

1. Display the Print Order menu (⇒ p. 63)

   - Use the ▲ or ▼ button to select [Print].

2. Number of Images Left to Print

   - Current Print Style

   - Use the ▲ or ▼ button to select [Resume].
   - Select [Style] if you wish to change the print style (p. 75).
   - Select [Cancel] if you wish to stop printing.
• Press the SET button to resume printing.
• The LCD monitor returns to the replay mode when printing concludes successfully.

Printing cannot be resumed, however, under the following circumstances:
• When print setting are changed before printing is resumed.
• When images marked for printing are deleted before printing is resumed.
• When there is limited free capacity on the CF card when printing is stopped.

Printing resumes from the first image if [OK] is selected in the Print menu. You are recommended to use a household power source (AC adapter sold separately) if the battery pack charge is depleted and the camera shuts down. If you intend to use a battery pack, ensure that you charge it fully before use. Then turn the camera on again.

Printing Errors

1. Use the ◄ or ► button to select [Stop] or [Resume].

• The [Resume] option does not display with some types of error. In that case, select [Stop].

2. Printing will stop or resume.
## Setting the Print Style

The following settings can be selected.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Image</strong></td>
<td>Prints one copy of one image per sheet.</td>
</tr>
<tr>
<td></td>
<td><strong>Multiple</strong> Prints 8 copies of one image on a single sheet. Use the Multiple setting to print on adhesive labels.</td>
</tr>
<tr>
<td><strong>Borders</strong></td>
<td>Prints the image to the edges of the sheet.</td>
</tr>
<tr>
<td></td>
<td><strong>Bordered</strong> Prints the image with borders.</td>
</tr>
<tr>
<td><strong>Date</strong></td>
<td>Prints the date with the image.</td>
</tr>
</tbody>
</table>

1. **Current Print Style**
   - Use the ↘ or ↗ button to select [Style].
   - Select [Cancel] if you wish to cancel the setting.

2. **Image**
   - Select [Standard] or [Multiple].

3. **Borders**
   - Select [Borderless] or [Bordered].
Date
Select [On] or [Off].

- Use the ◀ or ▶ button to select the desired option and press the SET button.
- Press the MENU button to complete the procedure.

- The date and border settings cannot be selected for images set to [Multiple] in the [Image] menu (they will print without dates or borders).
- The date cannot be selected for images marked with DPOF print settings. The date is printed according to the DPOF settings (p. 63).
- Printing with the [Bordered] setting prints virtually all of the image shown in the LCD monitor.
- Printing with the [Borderless] setting or the [Multiple] setting will result in the image being slightly cropped on all four sides because the aspect ratio of the image and paper is different.
Camera Settings

Displaying the Rec. Menu

Camera settings are adjusted with the Rec. menu according to the following procedures. For instructions on changing the resolution and compression, please see page 37. Please see page 34 to learn how to change the review time for images.

1. The Rec. menu can be displayed in mode. It can not be shown in mode.

2. Press the MENU button repeatedly until the Rec. menu appears (p. 30).

3. Complete the procedure.
Resetting the File Number

You can select the method which the camera uses to assign file numbers with the File No. Reset function.

### On
- The starting file number is reset to 100-0001 each time a new CF card is inserted. New images recorded on previously recorded CF cards with existing files are assigned the next available number.

### Off
- The file number of the last recorded image is saved so that the next image recorded on any CF card, including a new one, is assigned the next available number.

1. Display the Rec. Menu (→ p. 77)
   - Use the  or  button to select ．

2. File No. Reset
   - Use the  or  button to select [On] or [Off].

3.  
   - Shooting with the File No. Reset set to [Off] is useful for avoiding file name duplication when the images are uploaded to a computer and organized in a single directory or album.

About File Numbers

- Images are assigned individual frame numbers ranging from 0001 to 9900 and organized in folders containing up to 100 images. The folders are assigned names from 100 to 998. (Folder numbers cannot contain 99 in the last two digits.)
- Since images shot in , , or  mode are always saved together in the same folder, some folders may contain 101 or more images.
# Setting the Beep On/Off

A beep sounds for confirmation purposes when the shutter button is pressed or a camera setting is changed. The beep can be turned off.

1. **Display the Rec. Menu**
   (p. 77)

   - Use the or button to select 🎧.

2. **Beep**

   - Use the or button to select [On] or [Off].

   - The warning beep is not controlled by this setting and will still sound.
Formatting CF Cards

New CF cards must be formatted in accordance with the following procedures before use.

- Please note that formatting a CF card erases all its data, including protected images and other types of data.

1. Display the Rec. Menu (⇒ p. 77)
   - Use the ‹ or › button to select .

2. Use the ‹ or › button to select [OK].
   - To cancel formatting, select [Cancel].

3. When the camera is not operating as expected, reformatting the CF card may solve the problem.
   - When a non-Canon brand CF card is malfunctioning, reformatting it may solve the problem.
   - CF cards formatted in other cameras, or by computers or peripheral devices, may not operate correctly in the camera. Reformat the card in your camera.
Changing Other Settings

Switching the Auto Power Down Function On/Off

The auto power down function can be set to automatically turn the camera power off after a set period of time passes without the camera being used.

<table>
<thead>
<tr>
<th>On</th>
<th>The camera shuts off after approximately 3 minutes in shooting mode or approximately 5 minutes in replay mode if the camera is not used. Press the main switch to restore power.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>If it is on, the LCD monitor shuts off after approximately 3 minutes in the shooting mode if the camera is not used. Pressing any button other than the main switch will turn the LCD monitor on again.</td>
</tr>
</tbody>
</table>

1. Display the Rec.Menu (⇒ p. 77)

   - Use the \(<\) or \(>\) button to select \(\text{Power Down Setting}\).

2. Set up

   - Use the \(<\) or \(>\) button to select \(\text{Auto Power Down}\).

3. Auto Power Down

   - Use the \(<\) or \(>\) button to select \([\text{On}]\) or \([\text{Off}]\).

4. • The auto power down function will not activate in auto play even when it is set to On.
Setting the Video Signal Format

To use a TV monitor to shoot or replay images, the video signal format can be switched to suit regional standards.

1. Display the Rec. Menu (p. 77)
   - Use the or button to select "Rec. Menu".

2. Set up
   - Use the or button to select "Set up".

3. Video System
   - Use the or button to select [NTSC] or [PAL].
Setting the Language

The language in which menus and messages are displayed can be selected with this function.

1. Display the Rec. Menu (⇒ p. 77)

   - Use the ◄ or ► button to select ıt.

2. Set up

   - Use the ◄ or ► button to select ❥.

3. English, Deutsch, Français, Español, 日本語

   - Use the ◄ or ► button to select a language.

- The Language menu can also be displayed in replay mode by holding down the SET button and pressing the MENU button. However, language settings cannot be adjusted while Card Photo Printer CP-10 (sold separately) is connected.
- The Language menu may appear differently on cameras in some regions.
Shooting/Replaying with a TV Monitor

A TV monitor can be used to view images as they are shot or replayed when it is connected to the camera via the supplied AV cable (AVC-DC200). Always turn the camera and TV power off before attaching or detaching the AV cable.

• After the cable has been attached, turn on the TV and switch it to the Video mode.
• Turn on the camera and slide its mode switch to or .
• If the image does not appear on the TV when shooting, press the DISP button.

• TV monitors cannot be used with the and mode.
• Images will not appear in the camera’s LCD monitor when the TV is used as the monitor.
• The video output signal can be switched (NTSC or PAL) to accommodate different regional standards (p. 82). The default setting will vary between regions.
  - NTSC: Japan, U.S.A., Canada, Taiwan, etc
  - PAL: Europe, Asia (excluding Taiwan), Oceania, etc.
• Connect the AV cable to either the left or right Audio In jack on the TV. Please check your TV’s manual for the correct configuration.
Downloading Images to a Computer

Downloading Directly from a CF Card

Images can be loaded directly from a CF card to a computer if you are using a notebook computer, a PC card reader or a CF card reader.

Inserting the CF Card

PC Card Reader

1. Eject the CF card from the camera and insert it into the PC card adapter.
2. Insert the PC card adapter into the computer's PC card slot or PC card reader.

- A PC card adapter (PCMCIA adapter), sold separately, is required to use a PC card reader.

- Some computers or PC card readers require the power to be off when the PC card adapter is inserted into the PC card slot. Since this requirement varies between models, please consult the manual for your equipment.

CF Card Reader

1. Eject the CF card from the camera and insert it into directly into a CF card reader connected to the computer.

- Some computers or CF card readers require the power to be off when the CF card is inserted. Since this requirement varies between models, please consult the manual for your equipment.
### Downloading Images

1. Double-click the icon of the drive with the CF card.

2. Copy the photographed images to the desired folder on the hard disk.

   The images are contained in the [XXXCANON] folder inside the [DCIM] folder on the CF card. The XXX represents a number from 100 to 998.

### Image Folder Organization and File Names

- **IMG_XXXX.JPG**
  - (Images shot in the JPEG format)
- **STA_XXXX.JPG**
  - (Images shot in Stitch Assist mode)
- **MVI_XXXX.AVI**
  - (Movies)
- **MVI_XXXX.THM**
  - The folder containing the files controlling the DCIM folder images

**CANONMSC**

- A folder created when DPOF settings are set. Contains the files controlling the DPOF settings content

- *These files contain thumbnail images for the index display.
- A number will appear in place of each "X" in the file names.
- Do not open or delete files in folders other than [XXXCANON]. Those files are required for image management.

### Viewing Downloaded Movies on a Windows System

If you try to view a movie by double-clicking its file name (AVI extension) in Windows Explorer, Windows Media Player may start without being able to replay it. To replay a movie, start the bundled software program that supports movies and open the movie file from within it.

Please refer to the Software Starter Guide for the remaining procedures.
Connecting the Camera to a Computer with a USB Cable

Supported Operating Systems

<table>
<thead>
<tr>
<th>Windows</th>
<th>Windows 98 (Including the Second Edition)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Windows Millennium Edition (Windows Me)</td>
</tr>
<tr>
<td></td>
<td>Windows 2000</td>
</tr>
<tr>
<td>*</td>
<td>Only systems pre-installed with Windows 98 / Me / 2000 or upgraded to Windows Me from pre-installed Windows 98 systems are supported.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Macintosh Computers</th>
<th>Mac OS 8.1 or later, QuickTime 3.0 or later</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(not supported on Mac OS X)</td>
</tr>
<tr>
<td>*</td>
<td>Only genuine Apple Computer systems with built-in USB interfaces are supported.</td>
</tr>
</tbody>
</table>

- Before connecting the camera to your computer for the first time, you must install the required software onto the computer. Once the software has been installed, you can connect the camera to the computer using USB Interface Cable IFC-200PCU, which is included.

- Please see the Software Starter Guide to learn how to install the software and download images.
- Please use a CF card reader or PC card reader to download images to a system running Windows 95 or Windows NT.

- Please power the camera with an AC adapter (sold separately) connected to a household power source.

Connection Precautions

- The USB ports may not operate correctly on systems that have been upgraded to Windows 98 / Me / 2000 from Windows 3.1 / 95 or to Windows 2000 from a pre-installed Windows 98 system.
- With Macintosh computers, the USB interface only works with Power Macintosh NEW G3/G4, PowerBook G3, iMac and iBook models with built-in USB connectors.
- Connect the camera directly to a USB port on the computer. The interface may not operate correctly when connected through a USB hub.
Operating the camera simultaneously with other USB devices, excluding USB mice and keyboards, may not work correctly. If this occurs, disconnect the other devices and then reconnect the camera.

Do not have more than two cameras connected to a computer with the USB interface at any time. The cameras may not operate correctly.

Do not put the computer into standby (sleep) mode when a camera is connected via a USB port. If the computer should go into standby mode while a camera is connected to a USB port, leave the camera connected (never disconnect it) and try to take the computer out of standby mode. Some computers may not recover properly from the standby mode if the cable is disconnected. Please refer to the computer's manual for information regarding the standby mode.

Connecting to a USB Port

1. Connect the supplied USB interface cable to the computer's USB port and the camera's Digital A/V Out terminal.

- Slip a fingernail under the upper edge of the terminal cover to open it.
- Insert the cable so that the symbols on the cable and camera align.

- You do not need to turn the camera or computer power off to connect or disconnect USB interface cables.
- Please refer to your computer's manual for information regarding the location of the USB ports.
2. Slide the camera’s mode switch to [Rec].
   • The replay screen will display and when the connection to the computer is complete, the LCD monitor will shut off and the indicator will glow green.

   ![PUSH Button]

   • Always press the PUSH button on the connector when detaching the cable from the camera’s Digital A/V Out terminal.

• If the USB cable is detached while the camera power is on, the camera will power down.

• When the camera is connected to a computer, a warning displays on the computer display after 5 minutes if the camera is not used. The camera shuts down if a further minute passes without a button being pressed. To restore power, press the main switch again.

• Please refer to the Software Starter Guide for the subsequent procedures.
Appendices

Care and Maintenance of the Camera
Use the following procedures to clean the camera body, lens, viewfinder and LCD monitor.

• Never use thinners, benzene, synthetic cleansers or water to clean the camera. These substances may distort or damage the equipment.

Camera Body
Gently wipe dirt off the camera body with a soft cloth or eyeglass lens wiper.

Lens
First use a lens blower brush to remove dust and dirt, then remove any remaining dirt by wiping the lens lightly with a soft cloth.

• Never use synthetic cleansers on the camera body or lens.
• If dirt remains, contact the closest Canon Customer Support Help Desk (see the back of this guide).

Viewfinder and LCD Monitor
Use a lens blower brush to remove dust and dirt. If necessary, gently wipe the viewfinder with a soft cloth or an eyeglass lens wiper to remove stubborn dirt.

• Never rub or press strongly on the LCD monitor. These actions may damage it or lead to other problems.
## Troubleshooting

### Camera will not operate

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power is not on</td>
<td>• Press the main switch for a few moments.</td>
</tr>
<tr>
<td>Battery cover or CF card cover opened</td>
<td>• Close the battery cover or CF card cover and then press the main switch again to turn the camera off.</td>
</tr>
<tr>
<td>Insufficient battery voltage</td>
<td>• Insert a fully charged battery pack.</td>
</tr>
<tr>
<td>Poor contact between battery pack and camera terminals</td>
<td>• Wipe the battery terminals with a clean, dry cloth.</td>
</tr>
</tbody>
</table>

### Camera will not record

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode switch is set to 🎥 (Replay)</td>
<td>• Slide the mode switch to 📸 (shooting).</td>
</tr>
<tr>
<td>Flash is charging</td>
<td>• Wait until the flash charges. You can press the shutter button when the indicator glows a steady orange.</td>
</tr>
<tr>
<td>CF card full</td>
<td>• Replace the CF card.</td>
</tr>
<tr>
<td></td>
<td>• If necessary, download the images to a computer and then erase all or some of the card’s images to create space.</td>
</tr>
<tr>
<td>CF card not formatted correctly</td>
<td>• Format CF card. See Formatting a CF Card (p. 80).</td>
</tr>
<tr>
<td></td>
<td>• If reformatting does not work, the CF card logic circuits may be faulty or damaged. Contact the nearest Canon Customer Support Help Desk.</td>
</tr>
</tbody>
</table>
### Lens will not retract

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery cover or CF card cover was opened with power on</td>
<td>• First close the battery cover or CF card cover and then turn the power off.</td>
</tr>
<tr>
<td>Battery cover or CF card cover was opened while recording to the CF card (warning signal sounds)</td>
<td>• First close the battery cover or CF card cover and then turn the power off.</td>
</tr>
</tbody>
</table>

### Battery pack consumed quickly

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>At room temperature (23 ºC or 73 ºF), fast discharge indicates the battery pack’s service life is over</td>
<td>• Replace the battery pack with a fresh one.</td>
</tr>
</tbody>
</table>

### Battery pack will not charge

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery pack life exceeded</td>
<td>• Replace battery pack with a new one.</td>
</tr>
</tbody>
</table>
| Poor connection between battery pack and battery charger | • Seat the battery pack more firmly in the charger.  
• Plug the battery charger all the way into the electrical outlet. |
## Image is blurred, out of focus, or not as expected

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Camera moved</td>
<td>• Be careful not to move the camera when pressing the shutter button.</td>
</tr>
<tr>
<td>Autofocus function is hampered by</td>
<td>• Be careful not to block the AF auxiliary light emitter with your</td>
</tr>
<tr>
<td>something obstructing the AF auxiliary</td>
<td>fingers or other items.</td>
</tr>
<tr>
<td>light emitter</td>
<td></td>

<td>• Use the infinity mode to shoot distant subjects.</td>
</tr>
</tbody>
</table>

## Subject is too dark in image

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insufficient light for shooting</td>
<td>• Set the flash to On.</td>
</tr>
<tr>
<td>Subject is much darker than its surroundings</td>
<td>• Set the exposure compensation to a positive (+) setting.</td>
</tr>
<tr>
<td>Subject is too far away for flash to reach</td>
<td>• When using the flash, ensure that the camera is no farther from the</td>
</tr>
<tr>
<td></td>
<td>subject than 3 m (9.8 ft.) at the maximum wide angle, or 2 m (6.6 ft.)</td>
</tr>
<tr>
<td></td>
<td>at the maximum telephoto setting.</td>
</tr>
</tbody>
</table>
### Subject is too bright

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subject is too close and the illumination from the flash is too bright.</td>
<td>• When using the flash, ensure that the camera is no closer to the subject than 27 cm (10.6 in.).</td>
</tr>
<tr>
<td>Subject is much brighter than its surroundings</td>
<td>• Adjust the exposure compensation to a negative (-) setting.</td>
</tr>
<tr>
<td>Light is shining directly on subject or reflected off subject onto camera</td>
<td>• Change the shooting angle.</td>
</tr>
<tr>
<td>Flash is set to On</td>
<td>• Set the flash to any setting other than On.</td>
</tr>
</tbody>
</table>

### Flash will not fire

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flash is set to Off</td>
<td>• Set the flash to any setting other than Off.</td>
</tr>
</tbody>
</table>

### Zoom does not work

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zoom lever pressed during movie recording</td>
<td>• Adjust the zoom before shooting a movie.</td>

FCC Notice
(Digital Camera, Model PC1012)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions;
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for Class B digital devices, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

The cables with the ferrite core provided with the digital camera must be used with this equipment in order to comply with Class B limits in Subpart B of Part 15 of the FCC rules.

Do not make any changes or modifications to the equipment unless otherwise specified in the manual. If such changes or modifications should be made, you could be required to stop operation of the equipment.
