Instruction Manual

Content of this Instruction Manual

- EU stands for EOS Utility.
- Camera model is displayed as an icon.

Example: EOS-1D X \rightarrow 1D X

As for xx icon, it indicates all models EOS XX (WG)/EOS XX (W)/EOS XX (N) respectively. When any explanation is necessary for the specific model, an icon such as xx(WG) xx(W) is used.

displays the relevant camera model.

 The selection sequence of menus is displayed in procedures.

(Example: Select the [Window] menu ► [Main Window].)

 Square brackets are used to indicate items such as menu names, button names and window names that appear on the computer screen.

- Text inside < > indicates a camera switch name or icon, or a keyboard key name.
- p.** indicates a reference page. Click to move to the relevant page.
- (!) : Marks information that should be read before use.
- Image: Marks additional information you may find helpful.

Switching Between Pages

- Click on arrows on the bottom right of the screen.
 - 🜔 : Next page
 - 🚺 : Previous page
 - S : Return to a page you had previously displayed
- Click on the chapter headings on the right side of the screen to switch to the contents page of that chapter. Also, click the item you want to read about on the table of contents to move to the relevant page.

READ CAREFULLY BEFORE USING!

CANON SOFTWARE LICENSE AGREEMENT

IMPORTANT - READ THIS AGREEMENT BEFORE USING THE SOFTWARE ON THE CD-ROM IN THIS BOX. BY USING THE SOFTWARE, YOU AGREE TO BE BOUND BY THE TERMS OF THIS AGREEMENT.

This is a license agreement (the [Agreement]) between you and Canon Inc. ([Canon]).

IF YOU DO NOT AGREE TO THE TERMS AND CONDITIONS OF THIS AGREEMENT, DO NOT USE THE SOFTWARE PROGRAM ON THE CD-ROM AND THE USER MANUAL IN THIS BOX (COLLECTIVELY, THE [SOFTWARE]) AND RETURN THE SOFTWARE WITHIN 30 DAYS FROM THE DATE OF PURCHASE TO YOUR POINT OF PURCHASE FOR A REFUND.

In consideration of the right to use the SOFTWARE, you agree to abide by the terms and conditions of this Agreement.

 LICENSE: Canon grants you the non-exclusive right to use the SOFTWARE only on a single computer. You may physically transfer the SOFTWARE from one computer to another provided that the SOFTWARE is used on only one computer at a time. You shall not install or use the SOFTWARE on a network, multiple CPU, multiple site arrangement, or any other hardware configuration where the SOFTWARE is accessible to more than one CPU or to more than one user.

YOU SHALL NOT ASSIGN, SUBLICENSE, RENT, LEASE, LOAN, CONVEY OR OTHERWISE USE, TRANSFER, COPY, TRANSLATE, CONVERT TO ANOTHER PROGRAMMING LANGUAGE, ALTER, MODIFY, DECOMPILE OR DISASSEMBLE THE SOFTWARE, IN WHOLE OR IN PART, EXCEPT AS EXPRESSLY PROVIDED IN THIS AGREEMENT.

- BACK-UP COPY: You may make one copy of the SOFTWARE solely for back-up purposes, or copy the SOFTWARE onto the permanent storage device (e.g. a hard disk) of your computer and retain the original for back-up purposes. Any other copying of the SOFTWARE is a violation of this Agreement. You must reproduce and include the copyright information on the back-up copy.
- SUPPORT AND UPDATES: Canon is not responsible for providing maintenance or support for use of the SOFTWARE. No updates, fixes or support will be made available for the SOFTWARE.
- 4. LIMITED WARRANTY AND LIMITATION OF LIABILITY: It is your responsibility to choose, maintain and match the hardware and software components of your computer system. Thus Canon does not guarantee uninterrupted service or correction of errors or that the functions or performance of the SOFTWARE will meet your requirements. THE SOFTWARE IS LICENSED ON AN [AS IS] BASIS AND WITHOUT WARRANTY OF ANY KIND. The CD-ROM storing the SOFTWARE is warranted only against defective material under normal use for a period of ninety (90) days after purchase from an authorized Canon dealer as evidenced by your sales receipt. Your sole remedy for a defective CD-ROM shall be replacement of the same without charge when returned by you at your expense to your point of purchase and proven to be defective upon inspection. The replacement CD-ROM will be warranted for the remainder of the original ninety (90) day warranty period of the defective CD-ROM. The limited warranty does not apply if the failure of the CD-ROM resulted from accident, abuse or misapplication of the SOFTWARE and shall not extend to anyone other than the original user of the SOFTWARE.

EXCEPT AS SPECIFICALLY SET FORTH IN THIS PARAGRAPH 4, CANON, CANON'S SUBSIDIARIES, DISTRIBUTORS AND DEALERS DISCLAIM ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WITH RESPECT TO THE SOFTWARE.

NEITHER CANON NOR ANY OF CANON'S SUBSIDIARIES, DISTRIBUTORS OR DEALERS IS LIABLE FOR ANY DAMAGES HOWSOEVER CAUSED, INCLUDING WITHOUT LIMITATION, DIRECT, CONSEQUENTIAL OR INCIDENTAL LOSS OR DAMAGE INCLUDING LOSS OF PROFITS, EXPENSE OR INCONVENIENCE HOWSOEVER CAUSED OR ARISING OUT OF THE SOFTWARE OR THE USE THEREOF.

NEITHER CANON, NOR ANY OF CANON'S SUBSIDIARIES, DISTRIBUTORS OR DEALERS SHALL HAVE ANY OBLIGATION TO INDEMNIFY YOU AGAINST ANY CLAIM OR SUIT BROUGHT BY A THIRD PARTY ALLEGING THAT THE SOFTWARE OR THE USE THEREOF INFRINGES ANY INTELLECTUAL PROPERTY OF SUCH THIRD PARTY.

- 5. TERM: This Agreement is effective upon your using the SOFTWARE and remains in effect until expiration of all copyright interests in the SOFTWARE unless earlier terminated. You may terminate this Agreement by destroying the SOFTWARE. This Agreement will also terminate without notice to you if you fail to comply with any of the terms of this Agreement and you must then promptly return the SOFTWARE. In addition, Canon may enforce its other legal rights.
- 6. U.S. GOVERNMENT RESTRICTED RIGHTS NOTICE: The SOFTWARE is provided with restricted rights. Use, duplication or disclosure is subject to restrictions as set forth in either subparagraph (c) (1) (ii) of the Rights in Technical Data and Computer software clause at DFARs 252.227-7013 or subparagraph (c) (1) and (2) of the Commercial Computer Software Restricted Rights Clause at FAR 52.227-19, as applicable.
- 7. SEVERABILITY: In the event that any provision of this Agreement is declared or found to be illegal by any court or tribunal of competent jurisdiction, such provision shall be null and void with respect to the jurisdiction of that court or tribunal and all the remaining provisions of this Agreement shall remain in full force and effect.
- 8. CONTROLLING LAW: The terms of this Agreement as it relates to purchases of the Software in the United States of America shall be governed and construed in all respects in accordance with the laws and regulations of the State of New York, without reference to choice of law principles. The terms of this Agreement as it relates to purchases of the Software in Canada shall be governed by the laws of the province of Ontario.
- 9. OWNERSHIP: All rights, including but not limited to copyrights and trade secret rights, to the SOFTWARE belong to Canon, its affiliated corporations and third party licensors. Your use of the SOFTWARE is subject to the United States, Canada and other applicable copyright and trademark laws and nothing in this Agreement constitutes a waiver of the rights of Canon, its affiliated corporations and third party licensors under such laws. Nothing contained in Paragraph 1 shall be construed to give Canon any ownership rights in any

images, graphics or textual material that you save in connection with the Software.

10.ACKNOWLEDGEMENT: BY USING THE SOFTWARE, YOU ACKNOWLEDGE THAT YOU HAVE READ THIS AGREEMENT, UNDERSTOOD IT, AND AGREE TO BE BOUND BY ITS TERMS AND CONDITIONS. YOU ALSO AGREE THAT THIS AGREEMENT IS THE COMPLETE AND EXCLUSIVE STATEMENT OF AGREEMENT BETWEEN YOU AND CANON CONCERNING THE SUBJECT MATTER HEREOF AND SUPERSEDES ALL PROPOSALS OR PRIOR AGREEMENTS, VERBAL OR WRITTEN, AND ANY OTHER COMMUNICATIONS BETWEEN THE PARTIES RELATING TO THE SUBJECT MATTER HEREOF. NO AMENDMENT TO THIS AGREEMENT SHALL BE EFFECTIVE UNLESS SIGNED BY A DULY AUTHORIZED OFFICER OF CANON. Downloading Images

EOS Utility (hereinafter EU) is software for communication with your EOS DIGITAL camera. By connecting the camera and computer with an interface cable, you can download to your computer images saved in the camera's memory card as well as set various camera settings or shoot remotely from EU on your computer.

Main Features of EU

From EU, you can control the camera remotely and perform the following main features.

- Batch download to your computer images saved in the camera's memory card.
 - You can also download to your computer only images you have selected.
- Set various camera settings from your computer.
- Shoot remotely by controlling the camera from your computer.
 - Remote Live View shooting Shoot while checking your subject in real time on your computer.
 - You can also shoot remotely by operating the camera's shutter button.
 - Preset a time allowing the camera to shoot automatically with timer shooting.
- When downloading images or shooting remotely, view/check images with the linked Digital Photo Professional version 4.x immediately.

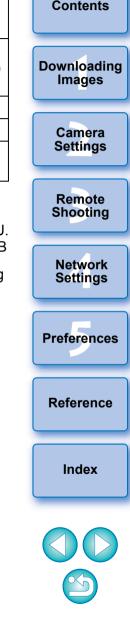

required. Internet Service Provider (ISP) connection fees or access point connection fees may apply.

Connecting the Camera and Computer

To download to your computer images shot with your camera, you will need to connect your camera and computer using an interface cable. Before connecting your camera and computer with EU's Wi-Fi/LAN connection pairing function, see "LAN Connection with EU" (p.10).

EOS DIGITAL cameras other than 1DXMkIII R

RP M6 Mk II

Connect the large plug of the cable into the USB port of your computer.

 For the location and direction of the USB port, refer to the user's manual for the computer.

Connect the small plug of the cable into the digital terminal on your camera.

Once the plug is connected to the camera according to the steps for your camera model, preparation for downloading images is complete. Refer to " Confirming Computer Settings" to check the settings of the computer, and continue with "Starting up EU" (p.9).

1D X Mk II 5DS/5DS R 5D Mk IV 7D Mk II

When connecting the cable to the camera, use the cable protector. Connect the cable to the digital terminal with the plug's <\$55€, ∞> icon facing the back of the camera.

Cameras other than those above

- With the < + > mark on the plug facing the front of the camera, connect it to the camera's <A/V OUT / DIGITAL> terminal or digital terminal.
- Introduction 1D X Mk III RP M6 Mk II R Connect the plug of the cable into the computer's USB terminal (Type-C). Contents Connect the other plug of the cable into the digital terminal on your camera. Downloading Images 1D X Mk III R • When connecting the cable to the camera, use the cable protector. Camera Settinas Remote Shooting Network Settings Preferences Reference Index

Using a genuine Canon interface cable is recommended.

Confirming Computer Settings

Before you start up EU, connect the camera and the computer and turn on the camera's power, then make sure that the following settings are applied to your computer. If these are not applied, adjust the settings as follows.

Windows 7

Select [Control Panel] ▶ [Devices and Printers]. ▶ Doubleclick the icon of the camera connected to the computer. ▶ Double-click [Change general settings] in the menu that appears. ▶ Set the pull-down menu for [When this device connects to this computer] to [Take no action].

Windows 8.1

Select [Control Panel] ▶ [View devices and printers]. ▶ Double-click the icon of the camera connected to the computer. ▶ Select and double-click [Change general settings] in the menu that appears. ▶ Set the pull-down menu for [When this device connects to this PC] to [Take no action].

Windows 10

Select the Start menu ▶ [Settings] ▶ [Devices] ▶ [AutoPlay]
In the window that appears, locate the pull-down menu under the name of the camera connected to the computer and set it to [Take no action].

After confirming and adjusting the settings, set the camera's power switch to <OFF>.

To start up EU, you must connect your camera to the same USB port as when you confirmed and adjusted the settings.

To use another USB port, confirm and adjust the settings again.

With 1DXMkIII 1DXMkIII 1DX 1DC 5DS/5DS R

5D Mk IV R (7D Mk II), you can fix the plug to the camera

with the cable protector to prevent the plug from disconnecting. For details on using it, see the camera instruction manual.

Starting up EU

When the camera's power switch is set to <ON>, EU will start up, and the camera and computer will be able to communicate.

Set the camera's power switch to < ON >.

Double-click the [EOS Utility] icon on the desktop.

- Communication between the camera and the computer begins, and the next screen is displayed.
- → From the next time you connect your camera and the computer, EU will start when you set your camera's power switch to <ON>.

EU Main window

EU starts up, the main window appears, and your camera and computer can now communicate. Continue with "Batch Downloading Images to Your Computer".

Introduction Contents Downloading Images Camera Settinas Remote Shooting Network Settings Preferences Reference Index When EU starts, a [16] icon appears on the taskbar of the desktop. You can click this icon and display the screen to apply the setting below. [Do not launch EOS Utility automatically when camera is connected] If you select [Quit] on this screen, EU will not start automatically

when you connect the camera and the computer again.

LAN Connection with EU

The Wi-Fi/LAN connection pairing function of EU is used for LAN connection. This function cannot be used with **REBELT6S** 760D

REBEL T6i	750D	REBEL T7	2000D	1500D	REBEL T6	1300D	REBEL T100
4000D	3000D	M6	M5	M3	M10	M100	

Establish a connection following the procedures on Wireless File Transmitter Instruction Manual, Wi-Fi Function Instruction Manual or Wired LAN Instruction Manual supplied with the camera, and Wi-Fi Adapter W-E1 Instruction Manual. Note the difference between connection procedures for EU version 2.14 or later and those for EU version 2.13 or earlier as shown below.

Starting up WFT pairing software

(EU version 2.13 or earlier)

Starting up WFT pairing software is required.

(EU version 2.14, version 3.x)

While starting up WFT pairing software is not necessary, starting up EU is required.

When a camera is detected

(EU version 2.13 or earlier)

When a camera is detected and a message is displayed, double-click the WFT pairing software icon.

(EU version 2.14, version 3.x)

When a camera is detected and a message is displayed, click the message.

Before starting the procedure to establish a LAN connection, make sure to perform the following confirmation.

Start up EU before connecting the camera and the computer.

→ The following window appears.

Click the [Pairing over Wi-Fi/LAN] button. When a message [To connect to the camera via LAN, some Windows Firewall settings must be changed. Do you want to make these changes?] appears, select [Yes].

Batch Downloading Images to Your Computer

You can batch download to your computer the images saved on the memory card inserted in the camera according to the selected condition. The downloaded images are sorted by date into folders and are then displayed in the main window of Digital Photo Professional version 4.x (RAW image processing, viewing and editing software) (hereinafter DPP), which is linked to start up automatically, where you can check them immediately.

Click [Download images to computer].

→ Download images window appears.

Click the [Settings] button in [Start automatic download].

 \rightarrow The setting dialog box appears.

Select a condition for downloading images and click the [OK] button.

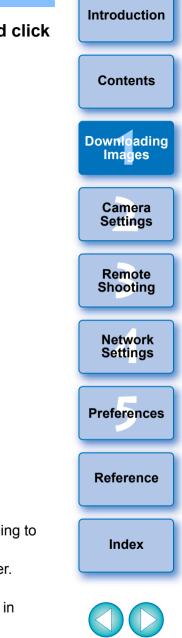

Settings for downloa	ded images		
Images not yet down	nloaded		
 All images 			
 Images whose print 	order settings were specified with th	ne camera	
 Protected images th 	at have not been downloaded yet		

→ The setting dialog box closes.

Click the text [Start automatic download].

- The [Save File] dialog box appears and image downloading to your computer begins.
- → The downloaded images are saved in the [Pictures] folder.
- When all images have been downloaded, DPP starts up automatically and the downloaded images are displayed in DPP's main window.

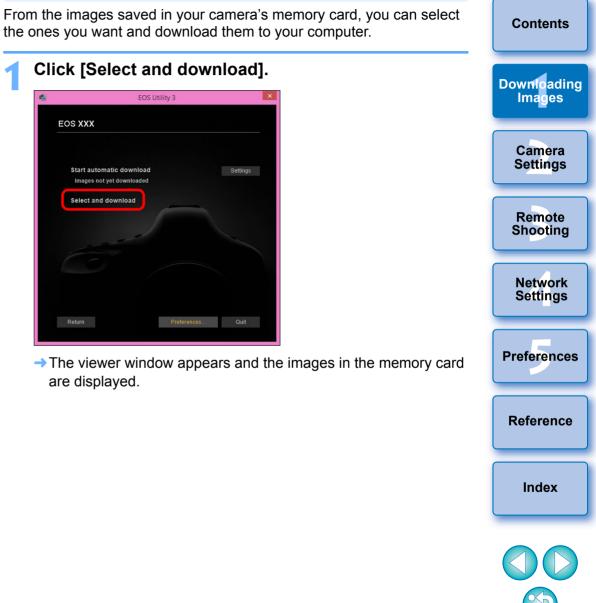

Check the downloaded images.

DPP Main window

- Check the downloaded images in DPP.
 For details on using DPP, refer to the "Digital Photo Professional Version 4.x Instruction Manual" (PDF electronic manual).
- Continue with "Exiting EU" (p.16).

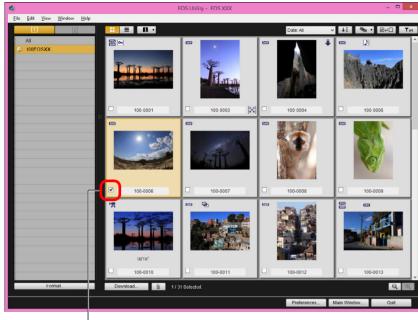

Downloading Selected Images to Your Computer

- You can change the software, which starts up when you download images, from DPP to other software in preferences ([Linked Software] tab sheet) (p.105).
 - You can change the save destination for images downloaded and images to download in preferences ([Destination Folder] tab sheet (p.103).
 - Downloading movie files may take some time due to the large file size.

View the images and select images to download.

Viewer window

Add check mark

If your camera has a direct image transfer function, you can download to your computer the images saved on the memory card inserted in the camera by operating the camera. Refer to your camera's Instruction Manual for details on its direct image transfer function.

Connect your camera and computer, and then start up EU (p.7).

Operate the camera to transfer the images directly.

→ The images in the camera are saved to your computer.

 When all images have been downloaded, Digital Photo Professional version 4.x starts up and the downloaded images are displayed.

Introduction

Contents

 By clicking the [Format] button in the viewer window, you can initialize the card to which the images displayed in the viewer window.

 In step 2, you can batch checkmark several images in sequence. After clicking the first image you want to download, hold the
 Shift > key and click the last image, and [
 Image: Image will be displayed. By clicking the [
 Image: Image will be checkmarked in a batch.

• For a list of viewer window functions, see p.111.

 In an HDR environment, images shot with HDR PQ set on the camera are displayed as HDR PQ (10-bit) images also in the [Quick Preview] window. For details on an HDR environment, see "Remote Live View Display when HDR PQ is Set" (p.84).

Exiting EU

Click the [Quit] button.

EOS XXX Download images saved on your camera to your computer. C Download images to computer Remote Shooting C C Preferences... Cut

- → The window closes and EU exits.
- Turn the camera's power switch to < OFF >.

Disconnect the cable from the camera and computer.

• Do not pull on the cable; hold the plug and pull out.

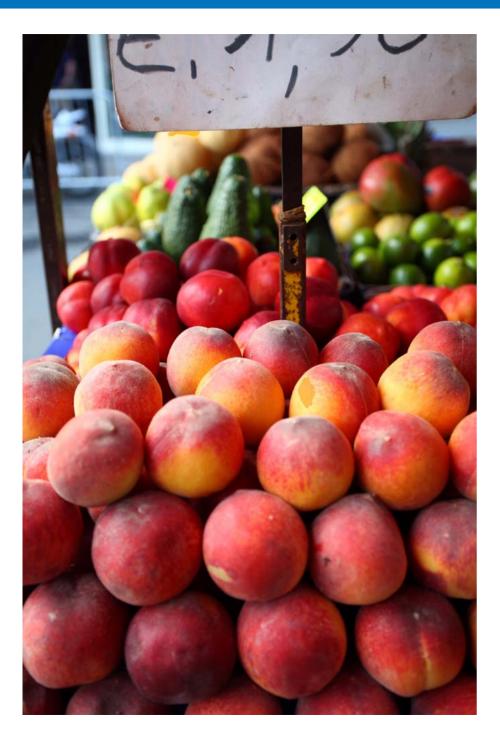

🗜 EOS Utility Survey Program

Canon requests that information related to your Canon product be sent to Canon (in case of using your Canon product in China, to the legally approved research company) through the Internet. Canon uses such information for development and marketing of products that better meet customer needs.

Even after agreeing, you can change the send settings anytime in the [Survey] tab sheet (p.106) in preferences.

2 **Setting the Camera from Your Computer**

This section explains how to set the camera's functions with EU.

 Register lens aberration correction data You can register lens aberration correction data for the lens to the 	Reference
 camera or delete registered data from the camera (p.22). Register Picture Style File You can register up to three Picture Style files and saved to your computer as user-defined settings in your camera (p.20). 	Index
 Owner's name You can enter and set up to 31 characters as the camera owner's name. 	
 Author You can enter and set up to 63 characters or symbols, including a prefix, as the author's name. 	

Copyright holder (copyright information)

 You can enter and set up to 63 characters or symbols, including a prefix, as the photo creation's copyright holder (copyright information).

Personal white balance settings

 You can register to the camera a personal white balance file (p.28). Also, you can save the adjustment results for an image's white balance to your computer as a white balance file (extension ".WBD") (p.27).

WFT Captions

- You can create captions to be used for the wireless file transmitter's "Transfer with caption" and register them to the camera with this function.
- For more details on WFT caption, refer to the Instruction Manual of the wireless file transmitter.

Register Background Music

 You can register WAV-format music files, saved to your computer, to the camera's memory card as background music. Registered background music can be played together with a Video Snapshot Album or slideshow played on the camera (p.86).

Register IPTC information

- If this function for adding IPTC* information is equipped with the camera, you can edit and register IPTC information. IPTC information is comment information, such as captions, credits, and shooting location (p.90).
 - * International Press Telecommunications Council

Web Service Settings

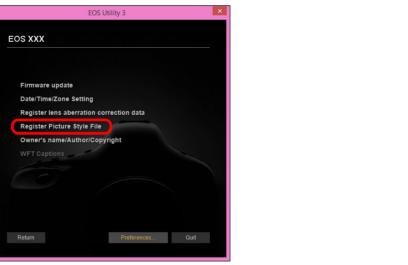

• You can register web services to a camera (p.89).

Applying Picture Style Files to the Camera

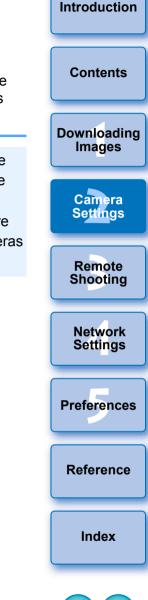

You can register up to three Picture Style files downloaded from the Canon Web site or created with Picture Style Editor (Picture Style file creating software) (hereinafter PSE) and saved to your computer, as user-defined settings in your camera.

- Picture Style files created with [Base Picture Style] set to [Fine Detail] cannot be registered to the cameras which do not have [Fine Detail] as a preset Picture Style.
 - If [Fineness] or [Threshold] in [Sharpness] is set for the Picture Style file, you cannot register that Picture Style file to the cameras which do not have [Fine Detail] as a preset Picture Style.

Click [Register Picture Style File].

→ The [Register Picture Style File] dialog box appears.

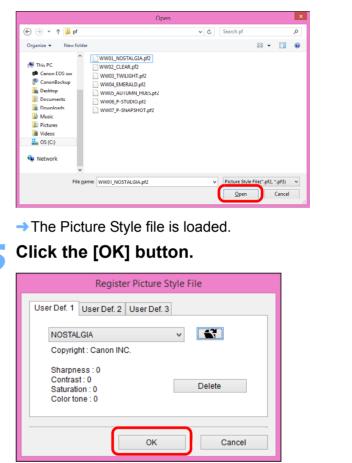

Select a tab from one of [User Def. 1] to [User Def. 3].

Register Picture Style File

Click the [**S**] button.

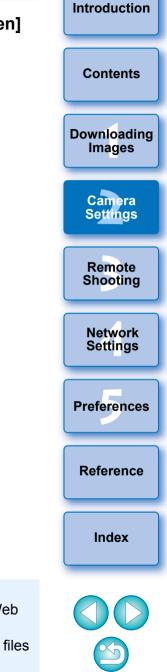

→ The [Open] window appears.

Select a Picture Style file and then click the [Open] button.

→ The Picture Style file is registered in the camera.

- A Picture Style file is an extended function of Picture Style. For more details on Picture Style files, refer to the Canon Web site.
 - The Picture Style files that you can apply to the camera are files with the ".PF2" or ".PF3" extension.
 - For details on using PSE, refer to the "Picture Style Editor Instruction Manual" (PDF electronic manual).

Registering Lens Aberration Correction Data for the Lens in the Camera

You can register lens aberration correction data for the lens to the camera, or delete registered data from the camera.

You can also register data for the Digital Lens Optimizer (hereinafter DLO) in some cameras.

For <u>1DC</u> (firmware version 1.3.0 or later), lens aberration correction data for EF Cinema lenses (CN-E lenses) can also be registered to the camera.

For **1DXMkIII**, since lens aberration correction data and DLO lens data are completely registered to the camera, registration is not required (as of February, 2020).

1D X Mk II 5D Mk IV

Click [Register lens aberration correction data].

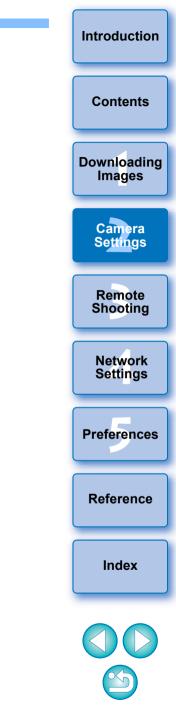

→ The [Register lens aberration correction data] window appears.

Select the lens category for which you want to register correction data.

Registering Lens Aberration Correction Data to the Camera

Lens aberration correction data for lenses available at the time of releasing the camera to the market are all registered to the camera It will not be necessary to register lens aberration correction data to the camera also for almost all lenses released to the market after the camera. However, it will be necessary to register lens aberration correction data to the camera for lenses with which no check mark is added to the lens aberration correction data column in the register lens data window. Register data to the camera with the following method.

To register lens aberration correction data for lenses to the camera, checkmark the boxes of lenses for which you want to register correction data and then click the [OK] button. EU exits.

Registering DLO Lens Data to the Camera

DLO lens data for lenses available at the time of releasing the camera to the market are all registered to the camera. However, it will be necessary to download DLO lens data and register the data to the camera for lenses released to the market after the camera.

1 Download DLO lens data to the computer

If DLO lens data is not downloaded to the computer or not registered to the camera, the DLO icon on the registering screen appears as [

Click the name of the lens you want to register.

→The DLO lens data is downloaded, and the icon changes to [Ooo].

2 Register DLO lens data to the camera

Click the [OK] button.

- →The DLO lens data is registered to the camera, and EU exits.
- →[OD_] appears the next time the register lens data window is displayed.
- If you click the [Cancel] button when step 1 is completed, DLO lens data is only downloaded to the computer.
- If update data is available on the server, an [^{*}⁽)] icon is displayed. Click the name of the lens, download the update data to the computer, and then click the [OK] button to register the data to the camera.

- Introduction Contents Downloading Images Camera Settings Remote Shooting Network Settings Preferences Reference Index
- To use this function, the EOS Lens Registration Tool (version 1.4.20 or later) must be installed.
- For a list of the [Register lens data] window functions, see p.112.
 Lens names displayed in the [Register lens data] window may be partially shortened depending on the lens type.
- The EF15mm f/2.8 Fisheye and EF8-15mm f/4L USM Fisheye are not compatible with [Register lens data].

Function Settings with Shooting Menu of the Capture Window

Function settings specified with the shooting menu of the capture window are explained here. Most functions set with the capture window are those tend to be changed during shooting. This function cannot be used with M6 M5 M3 M10 M100.

- Connect your camera and computer, and then start up EU (p.7).
- Click [Remote Shooting].

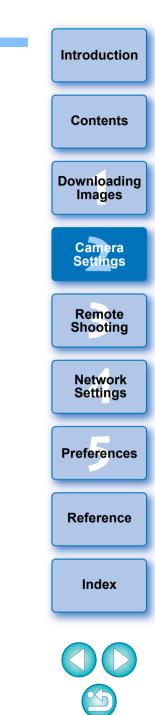

→ The capture window appears.

Click the [🚺] button.

→ The [Shooting menu] appears.

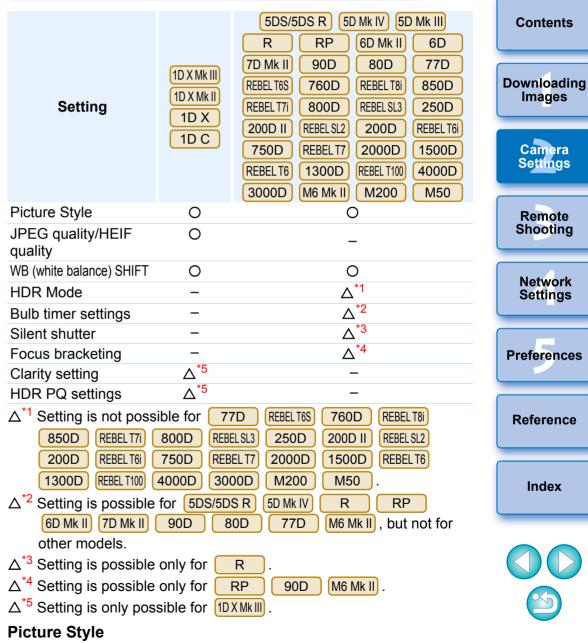

Click the required setting and specify each one.

Example of menu display (5D Mk III)

1 ÷ † † •	Ŏ
Shooting	g menu

HDR Mode	Disable HDR

Available settings are displayed for the camera that is connected.
 For more details, see "Items Settable with the Capture Window".

Items Settable with the Capture Window

 You can set a Picture Style and apply it to the camera, in the same way as operating from the camera (p.32).

JPEG quality/HEIF quality

 You can set the image quality and apply it to the camera, in the same way as operating from the camera (p.34).

Silent shutter

 You can set a silent shutter in the same way as operating from the camera (p.35).

WB (white balance) SHIFT

 You can adjust the white balance, in the same way as operating from the camera (p.35).

HDR (High Dynamic Range) Mode

 You can shoot photos with a wide dynamic range where clipping in highlights and shadows has been reduced, and photos that appear like paintings (p.43).

Bulb timer settings

• You can preset the bulb exposure's exposure time (p.80).

Focus bracketing

 You can perform focus bracketing in the same way as operating from the camera (p.45).

Clarity setting

• Function for enhancing the contrast at edges in an image (p.46).

HDR PQ settings

You can set HDR PQ in the same way as operating from the camera (p.84).

Setting Picture Styles and Applying to the Camera

You can set and apply Picture Styles to the camera, in the same way as operating from the camera. You can change the values for [Sharpness], [Contrast], [Saturation] and [Color tone] of each Picture Style and register up to three of your own Picture Styles in the camera as user-defined settings.

You can also register Picture Style files in the camera as user-defined settings you have downloaded from the Canon Web site or created with Picture Style Editor (Picture Style file creating software) (hereinafter PSE) and saved to your computer.

Registering Picture Styles may take some time.

Click the setting value.

Introduction

→ The settings are applied to the camera.

 Higher values give a lower compression ratio and higher image quality for any size.

Click [Return].

→ The display returns to the [Shooting menu].

Adjusting White Balance and Applying to the Camera

You can adjust white balance, in the same way as operating from the camera.

→ The [WB SHIFT] window appears.

tf Ó WB SHIFT Compensates G green A4 Displays the G5 Compensates в compensation blue value Compensates Compensates м amber magenta Return

→ The settings are applied to the camera.

Click [Return].

- → The display returns to the [Shooting menu].
- To revert the corrected values to the original values, follow the procedure in step 2.

Setting a Silent Shutter and Applying to the Camera

You can set a silent shutter and apply it to the camera in the same way as operating from the camera. For conditions in which a silent shutter can be set, check the camera's specifications.

- Click the [101] button and in the menu that appears, click [Silent shutter].
- In the dialog box that appears, select [Enable].
 - →[Silent shutter] is set on the camera.
 - To cancel the silent shutter, select [Disable] in this dialog box.

3 Remote Shooting by Controlling the Camera from Your Computer

From EU, you can control the camera remotely, and by viewing the subject in the EU window, you can set the camera and shoot. You can also shoot by directly operating your camera even during remote shooting, or preset a time allowing the camera to shoot automatically with timer shooting. This function cannot be used with M6 M5 M3 M10 M100.

Introduction

Remote Live View Shooting

You can control your camera remotely from EU and shoot still images from your computer screen.

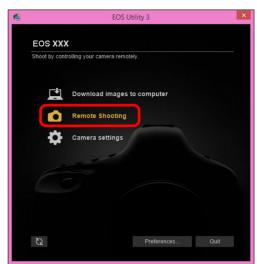

Also, the shot images are saved directly on your computer and you can recheck them using the linked software Digital Photo Professional version 4.x (hereinafter DPP).

This function is effective for shooting large numbers of shots with fixed-framing such as for studio shooting.

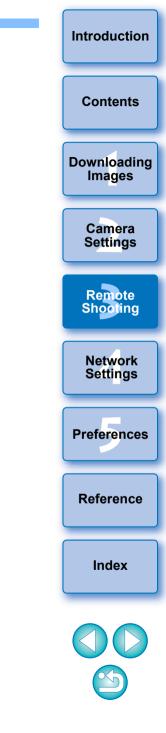

Connect your camera and computer, and then turn the camera's power switch to < ON >.

→ EU starts up.

Click [Remote Shooting].

→ The capture window appears.

Set the camera.

Capture window

Click or right-click the setting item and select the setting*1 *3

Click or right-click the setting item and select the setting^{*1} *²

- *1 If you checkmark [Change settings using mouse wheel on capture screen] (p. 104) on the [Remote Shooting] tab sheet on the [Preferences], you can also select settings with the scroll-wheel on your mouse. You cannot use the scroll-wheel in the mirror lockup menu or under [Image saving location].
- *2 You can right-click the Exposure level/AEB level item and perform AEB setting using the <Shift> key + scroll-wheel.
- *³ Settable only with some cameras.
- The settings that cannot be set in the capture window can be set by operating the camera.
- A warning lamp blinks during the countdown for self-timer shooting and the countdown time is displayed in the area for the number of possible shots.
- Mirror lockup settings are available when the camera mode is P, Tv, Av, M, or B.
- During mirror lockup, the mirror lockup icon blinks.
- With <u>5DS/5DS R</u>, you can select the release timing after the mirror lockup to take a picture. Timing can be selected from 1/8 second later, 1/4 second later, 1/2 second later, 1 second later, and 2 seconds later.
- When shooting with auto exposure, the shutter speed or aperture blinks to indicate under-exposure or over-exposure conditions.
- When shooting with manual exposure, the metering value is displayed in real time in the exposure level area.

DXMkIII 90D

You cannot set [LV func. setting] and [Exposure simulation] at the same time.

Specify settings by the following steps.

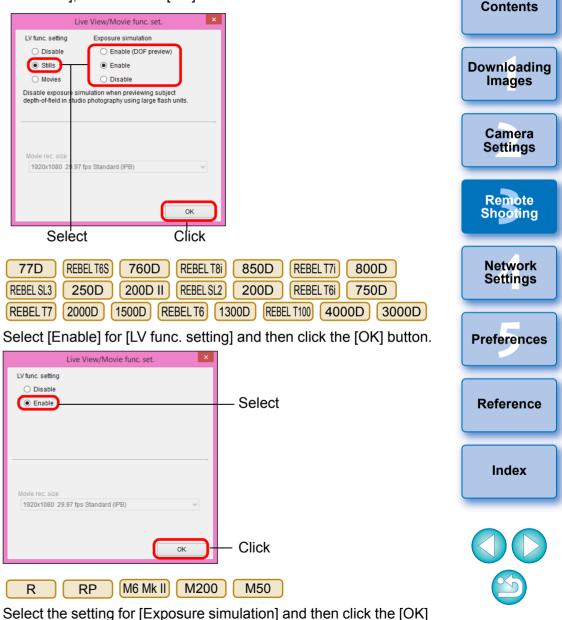

- 1. In this dialog box, set [LV func. setting] to [Enable] and then click the [OK] button
- 2. Click the [Live View shoot.] button in the capture window (p.41)
- Follow the procedure from step 4 to step 5 for "Remote Live View Shooting" (p.39) again
- 4. In this dialog box, select the setting for [Exposure simulation] and then click the [OK] button

Since the [Remote Live View window] has already appeared in 2. above, skip step 6 on p.41 and go to step 7 (p.42).

1D X 1D C

button.

Select [Stills] for [LV func. setting] and a setting for [Exposure simulation], and click the [OK] button.

Introduction

Exposure simulation

Exposure simulation simulates and displays the image with a brightness close to the actual resulting image.

Enable

The displayed image brightness will be close to the actual brightness (exposure) of the resulting image. If you set exposure compensation, the image brightness will change accordingly.

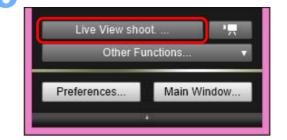

Disable

The image is displayed at the standard brightness to make the Live View image easy to see. Even if you set exposure compensation, the image is displayed at the standard brightness.

Enable (DOF preview)

Normally, the image is displayed at the standard brightness to make the Live View image easy to see. The image will be displayed close to the actual brightness (exposure) of the resulting image only while you hold down the depth-of-field preview button.

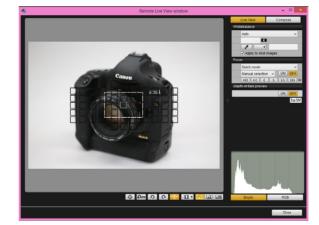

Click the [Live View shoot.] button.

→ The [Remote Live View window] appears.

Remote Live View window

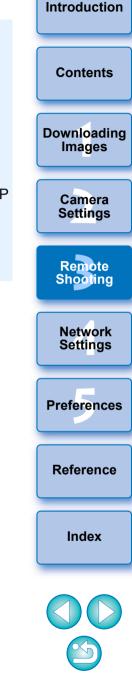

Click the [) button to shoot.

- → The shot image is transferred to your computer and displayed in the [Quick Preview] window. Then, DPP starts up automatically.
- You can quickly review the shot image in the [Quick Preview] window displayed before DPP starts up. You can also resize the [Quick Preview] window.
- You can show/hide the [Quick Preview] window by clicking the [Other Functions] button in the capture widow and selecting [Quick Preview] from the menu that appears.

- You can shoot by operating the capture window, even if the [Remote Live View window] is not displayed.
 - To perform exposure simulation (p.54) with [Remote Live View window] or enable display of histograms (p.116), set your camera's [Exposure simulation] in the menu to [Enable].
 - You can also use mirror lockup with remote shooting. (Mirror lockup is not possible during Remote Live View shooting.)
 - Self-timer shooting is possible.
 - You can change the software that starts up automatically when remotely shot images are transferred to your computer from DPP to other software in preferences ([Linked Software] tab sheet) (p.105).
 - For a list of the [Remote Live View window] functions, see p.116.
- For a list of the [Zoom View] window functions, see p.119.

- When shooting after focusing on the Remote Live View window, change the AF/MF switch button on the capture window to [MF] beforehand.
- You cannot perform RAW processing. If you connect the camera to your computer during in-camera RAW processing, the camera and computer will connect after the processing is finished.
- Options for Basic Zone modes cannot be set to cameras equipped with Basic Zone modes on their Mode Dials.

You can also shoot using the <space> bar on the keyboard.

HDR (High Dynamic Range) Shooting

6D

5DS/5DS R 5D Mk IV 5D Mk III R RP 6D Mk II 7D Mk II 90D 80D M6 Mk II

You can shoot photos with a wide dynamic range where clipping in highlights and shadows has been reduced, and photos that appear like paintings. This is suited for scenes such as still-life and landscape. In HDR shooting, one shot is taken using three images shot with different exposures (negative exposure, standard exposure, positive exposure), and they are combined into a single image automatically. Shot HDR images are recorded in JPEG quality.

* HDR stands for High Dynamic Range.

Set to HDR.

 Select [HDR Mode] in the [Shooting menu], and in the dialog box that appears, specify the required settings and click the [OK] button.

Images

Take a shot.

- The HDR mode cannot be set if you use any of the following functions: AEB, white balance bracketing, Multi Shot Noise Reduction, multiple exposures, flash exposure, remote bulb shooting, or movie shooting.
- HDR shooting of a moving subject is not recommended because the movement of the subject will appear as afterimages in the merged image. HDR shooting is recommended for still subjects.
- In HDR shooting, 3 images are captured with different shutter speeds set automatically. Therefore, even in Tv and M shooting modes, the shutter speed will be shifted based on the shutter speed set.
- To prevent camera shake, the ISO speed may be set higher than usual.
- Auto image alignment may not work properly with repetitive patterns (lattice, stripes, etc.) or flat, single-tone images.
- The color gradation of the sky or white walls may not be reproduced correctly. Irregular colors or noise may appear.
- With HDR shooting, the three images will be merged after you take a picture. Therefore, it will take a longer time to record the HDR image than with normal shooting. During the merging of the images, "BUSY" will be displayed on the camera and you cannot take another picture until the merging is completed.

- Using a tripod is recommended. For handheld shooting, using a fast shutter speed is recommended.
 - If [Auto Image Align] is set to [Enable] and the HDR picture is shot handheld, the edges of the photos will be cropped, lowering the resolution slightly. Also, if the images cannot be aligned properly due to camera shake, etc., auto image alignment may not take effect. Note that when shooting with excessively bright or dark exposure settings, auto image alignment may not work properly.
 - If you perform handheld HDR shooting while [Auto Image Align] is set to [Disable], the 3 images may not be properly aligned and the HDR effect may be minimal.
 - HDR shooting under fluorescent or LED lighting may result in unnatural color reproduction of the illuminated areas.
 - In HDR mode, the options dimmed in the menu cannot be set. Note that when you set HDR mode, for Auto Lighting Optimizer, highlight tone priority, and exposure simulation, [Disable] will be applied for shooting.

Focus Bracketing

RP 90D M6 Mk II

Focus bracketing enables continuous shooting with the focal distance changed automatically after a single shot. From these images, you can create a single image in focus over a wide area by using an application that supports depth compositing, such as Digital Photo Professional. Be sure to check the cautions for focus bracketing in the Instruction Manual provided with your camera before shooting.

Set focus bracketing.

 Select [Focus bracketing] in [Shooting menu], set each item in the window that appears, and then click the [OK] button.

Remote Live View Window Functions

These pages explain the functions available in the [Remote Live View window], including checking the camera settings and focusing while viewing your subject on the computer screen.

See also the list of [Remote Live View window] functions at the end of this manual (p.116, p.118).

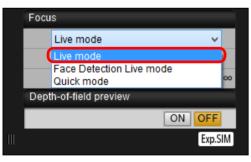

When shooting after focusing on the Remote Live View window, change the AF/MF switch button on the capture window to [MF] beforehand.

Focusing Manually

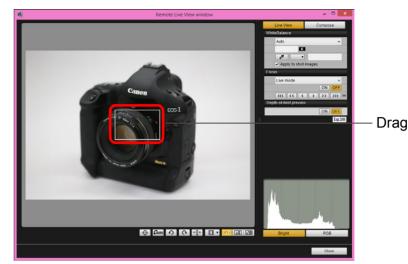

You can focus manually while viewing the enlarged image in the [Remote Live View window].

Set the lens's focus mode switch to < AF >.

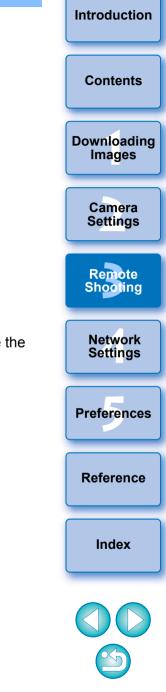

Select [Live mode], [FlexiZone - Single], [1-point AF], [Live 1-point AF] or [Spot AF] from the list box.

 If the [Continuous AF] checkbox is displayed, uncheckmark the checkbox. Drag the enlargement display frame [] to the section you want to enlarge.

 You can also click the section you want to enlarge to move the enlargement display frame [__].

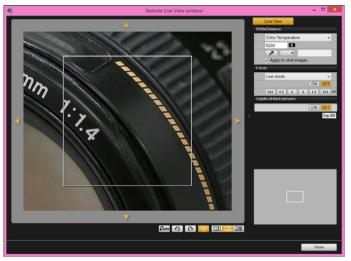

Click the [5] or [10] button.

x1 x5 x10 GAUTO

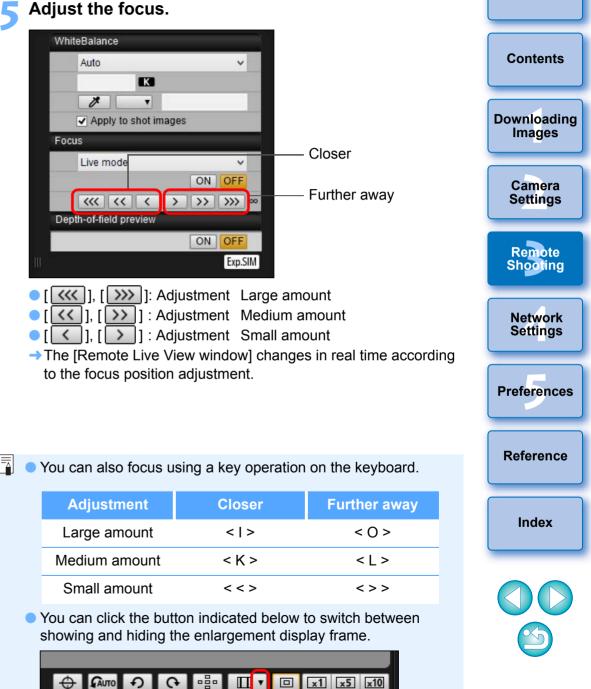

- When 5DS/5DS R is connected, the [15] and [10] buttons are displayed as [16] and [16] buttons.
- → The section you selected in step 2 is displayed enlarged in the [Zoom View] window.

Zoom View window

- To move the display position in the [Zoom View] window, click on [], [], [], [], []. You can also move the display position by dragging the window.
- You can also double-click the section you want to enlarge in step 2 to display an enlarged view at 5 times (when 5DS/5DS R) is connected, at 6 times) in the [Zoom View] window.
- Double-click an image in the [Zoom View] window to return to the [Remote Live View window].

Introduction

Focusing Using AF

In Quick, Live, Face Detection Live, and other AF modes, images can be focused automatically in the same way as on the camera itself.

Focusing Using Quick Mode

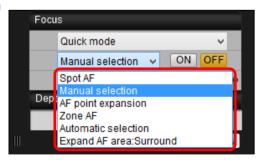

Select [Quick mode] from the list box.

	Set	tings

→ The [Recording settings] window appears.

• Clicking the [Close] button completes the setting.

Specify settings.

- Select [Auto], [Manual], or [Disable] from the list box.
- When setting is completed, click the [Close] button to close the [Recording settings] window.
- An attenuator settings box appears when IDXMkIII IDXMkII

5DS/5DS	R 5D M	Ik IV R	RF	9 6D N	lk II 🛛 6D	7D N	/k II
90D	80D	77D	REBEL T6S	760D	REBEL T8i	850D	
REBEL T7i	800D	REBEL SL3	250D	200D II	REBEL SL2	200D	
REBEL T6i	750D	is conne	cted. In c	condition	s with mu	ch loud	

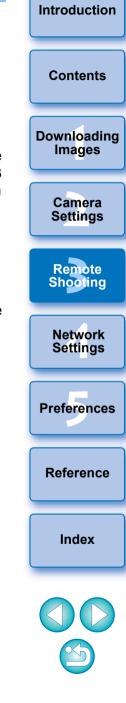

sound, sound cracking may occur even when shooting with [Sound recording] set to [Auto] or [Manual]. If there is sound cracking, it is recommended that you checkmark the attenuator function box to enable the attenuator function.

• When REBELSL3 250D 200D II M6 Mk II M200 M50 is connected, you can select from [Auto], [Disable], or [Enable] to set the attenuator.

Audio Recording/Audio Recording Level

[Auto]: The audio recording level is adjusted automatically according to the volume of the sound. When [Auto] is selected, you can only set the Wind filter function.
[Manual]: Function for advanced users. You can adjust the audio recording level as desired. Drag the audio recording level slider while checking the level meter to adjust the audio recording level. When the volume is loud, refer to the peak hold function (approx. 3 seconds) while adjusting so that the right side of "12" on the level meter (-12 dB) lights intermittently. Exceeding "0" results in sound cracking.
[Disable]: Sound is not recorded.

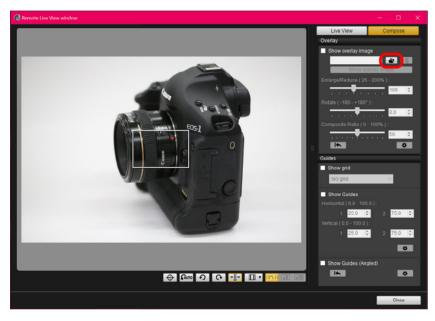

When you want to reduce the sound of the wind recorded while shooting outdoors, checkmark the Wind filter function box to enable the Wind filter function. It will function only when using a built-in microphone. However, when enabled, low bass sounds are also partially reduced, and it is recommended that you remove the check mark from this box in locations with no wind, to disable the Wind filter function.

Overlaid Display Function

An image saved in your computer can be overlaid on top of the image displayed in the [Remote Live View window]. As this function allows you to accurately align angles, it is useful when shooting several images at the same angle, such as when shooting product photos. Images loaded from your computer are only displayed, and are not included in the shot.

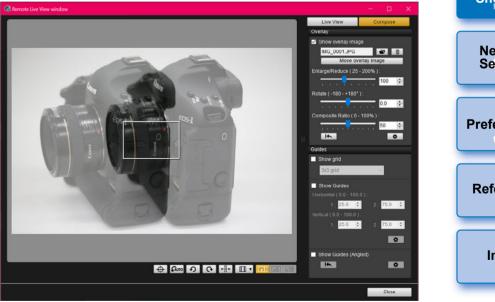

Select the [Compose] tab sheet in the [Remote Live View window] and click the [🝙] button in [Overlay].

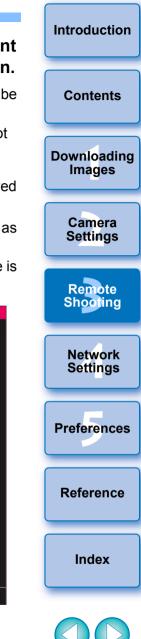

→ The [Open] dialog box appears.

In the dialog that appears, select the image you want to display as an overlay and click the [Open] button.

- RAW*, JPEG, HEIF, TIFF, BMP (bitmap), and GIF images can be displayed as an overlay.
 - * Only RAW images with the extension ".CR2" or ".CR3" shot with a Canon camera can be displayed as an overlay.
 - Even if the image has been adjusted with Digital Photo Professional version 4.x, the overlaid image will be displayed in the condition when it was shot.
- Even with supported image file types, the display of the image as an overlay may not be possible.
- [Show overlay image] is checkmarked, and the selected image is displayed as an overlay in the [Remote Live View window].

 An overlaid image (the overlay image) can be displayed enlarged/reduced, rotated, or with its composite ratio adjusted (p.61).

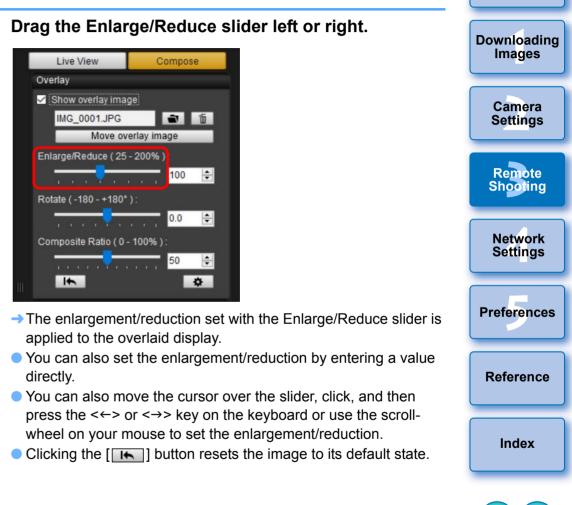

Move the camera and subject to compose your picture.

- You cannot use the Overlaid Display function in the [Zoom View] window.
- You can click [<u>[]]</u>] to clear the overlay image. If [Retain image overlays:] (p.63) is set to [Until application is closed], the overlay image is cleared when EU exits.

Enlarging/Reducing an Overlay Image

An image displayed as an overlay (the overlay image) can be enlarged/ reduced from 25 to 200%. Use the Enlarge/Reduce slider to set the enlargement or reduction.

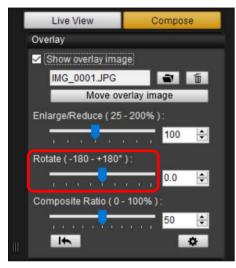

Introduction

Contents

Rotating an Overlay Image

An image displayed as an overlay (the overlay image) can be rotated from -180° to $+180^{\circ}$. Use the Rotate slider to set the rotation.

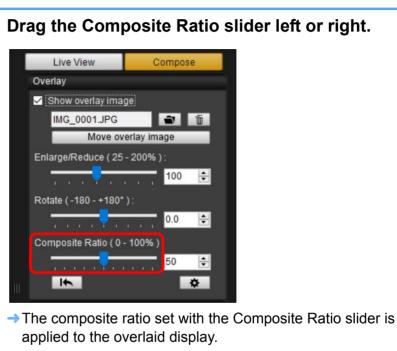

Drag the Rotate slider left or right.

- The rotated angle set with the Rotate slider is applied to the overlaid display.
- You can also set the rotated angle by entering a value directly.
- You can also move the cursor over the slider, click, and then press the <←> or <→> key on the keyboard or use the scrollwheel on your mouse to set the rotated angle.
- Clicking the [IK] button resets the image to its default state.

Setting the Composite Ratio of an Overlay Image

The composite ratio (transparency) of an image displayed as an overlay (the overlay image) can be set from 0 to 100%. Use the Composite Ratio slider to set the composite ratio.

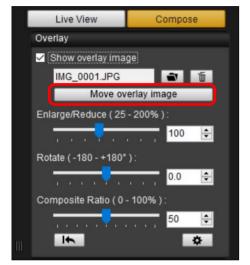

- You can also set the composite ratio by entering a value directly.
- You can also move the cursor over the slider, click, and then press the <←> or <→> key on the keyboard or use the scrollwheel on your mouse to set the composite ratio.
- Clicking the [IK] button resets the image to its default state.

Moving an Overlay Image

An image displayed as an overlay (the overlay image) in the [Remote Live View window] can be moved to a new position. You can also use the cursor of your mouse to enlarge/reduce or rotate the image.

Click the [Move overlay image] button.

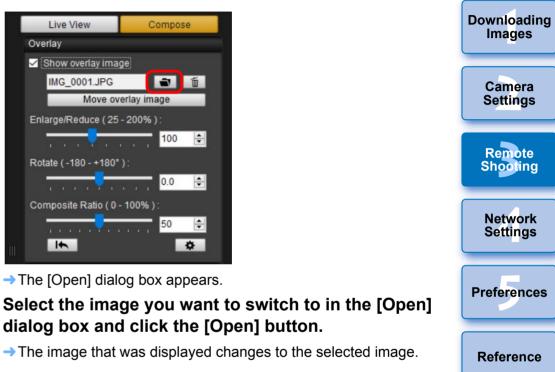

- Drag the cursor of your mouse over the overlay image.
- → The overlay image is moved to a new position.
- You can drag the cursor of your mouse in the [Remove Live View window] in the area outside the overlay image to rotate it.
- You can drag the cursor of your mouse in the corners of the overlay image to enlarge or reduce it.
- Clicking the [IK] button resets the image to its default state.

Displaying a Different Overlay Image

An image displayed as an overlay (the overlay image) can be changed to another image.

Click the [🝙] button in [Overlay].

Index

Introduction

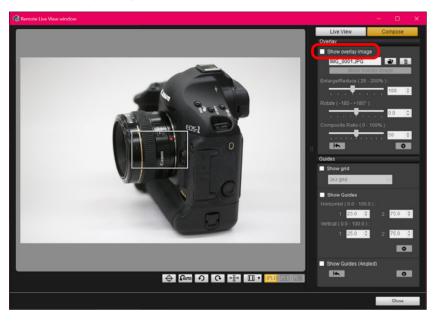

Contents

Hiding an Overlay Image

Hide an image displayed as an overlay (the overlay image).

Remove the check mark from [Show overlay image].

→ The overlay image is hidden.

 Checkmarking [Show overlay image] redisplays the overlay image.

Setting How Long to Retain an Overlay Image

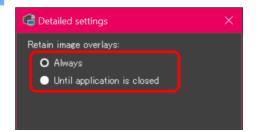

You can set how long an overlay image is retained. Set [Retain image overlays:] to [Always] to allow the selected overlay image to be applied when starting up EU again.

Click the [🔹] button.

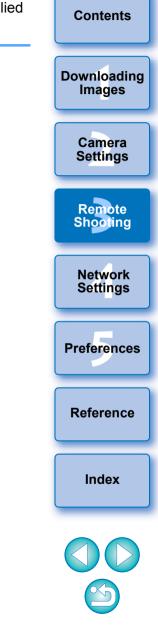

→ The [Detailed settings] dialog box appears.

Select how long to retain the overlay image.

→ [Retain image overlays:] is set.

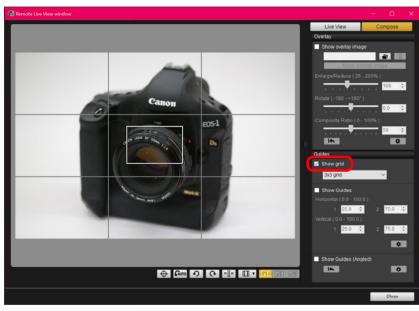

Introduction

Displaying Grid Lines

You can display grid lines in the [Remote Live View window] in the same way as the camera's Live View function, to check the camera's horizontal/vertical alignment.

Select the [Compose] tab sheet and checkmark [Show grid] in [Guides].

→ Grid lines are displayed in the [Remote Live View window].

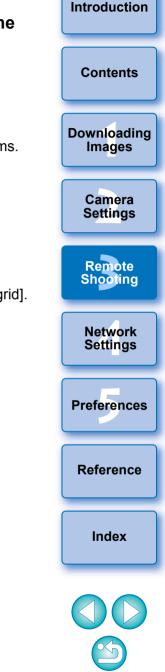

Select a display method for the grid lines from the [Grid] list box.

3x3 grid 3x3 grid 6x4 grid Customize grid

- By selecting [Customize grid], you can set the following items.
 - Number of grid blocks vertically and horizontally (2-90)
 - Grid line thickness (1-10)
 - Grid color
 - Show/hide diagonal lines

Move the camera to check its horizontal/vertical alignment.

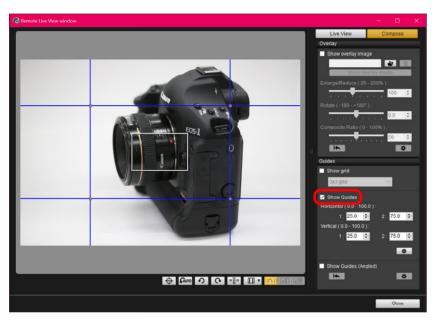

To hide the grid lines, remove the check mark from [Show grid].

Displaying Guide Lines

You can display guide lines in the [Remote Live View window] and locate them anywhere for alignment of the subject.

Select the [Compose] tab sheet and checkmark [Show Guides] in [Guides].

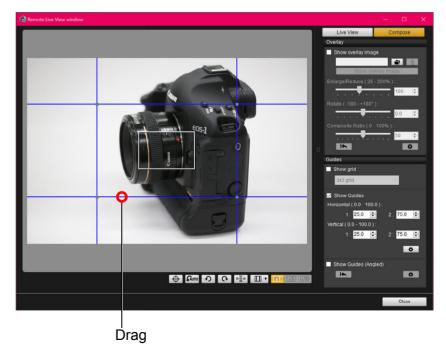

→ Guide lines appear in the [Remote Live View window].

Guide lines cannot be displayed during enlarged display.

- By clicking the [____] button, you can set the following items for guide lines in the dialog box that appears.
- [Color]: Click the [Choose] button and select the color of the lines in the dialog box that appears.
- [Width]: Choose a value between 1 and 10 for the width of the guide lines.
- [Display aspect ratio while moving guides] checkbox: Checkmark this option to display the aspect ratio indication of the center box formed by the guide lines when moving them.
- [Target ratio]: If the checkbox above is checkmarked, and you change the ratio in [Target ratio], the aspect ratio of the center box formed by the guide lines is displayed with the changed ratio.

Clicking the [OK] button completes the setting and the dialog box closes.

Drag the guide lines to the desired position on the screen.

- You can drag vertical and horizontal line intersections to change the size of the center box formed by the guide lines and maintain the same aspect ratio.
- You can drag with the right mouse button, or hold the <Shift> key and drag with the left mouse button to move the center box formed by the guide lines and maintain the same aspect ratio and size.
- You can also enter values between 0.0 and 100.0 in the [1:] and [2:] boxes in [Horizontal (0.0 - 100.0)] and [Vertical (0.0 - 100.0)] to move the guide lines.
- If the [Display aspect ratio while moving guides] checkbox is checkmarked in the dialog box that appears by clicking the [Detailed settings] button, an aspect ratio indication and the direction toward the target ratio are displayed when moving the guide lines.

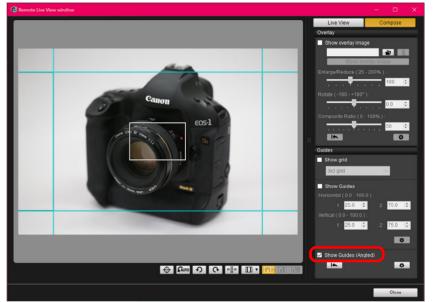

Move and position the camera.

• To hide the guide lines, uncheckmark [Show Guides].

Showing Guide Lines (Angled)

You can display guide lines in the [Remote Live View window], and then change them to any angle and move them to any position to match the position of a subject. The angle of a guide line appears as you move it.

Select the [Compose] tab sheet and checkmark [Show Guides (Angled)] in [Guides].

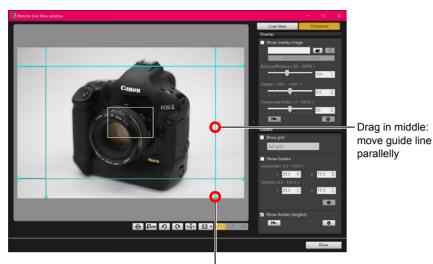

- → Guide lines appear in the [Remote Live View window].
- Guide lines cannot be displayed during enlarged display.

Introduction

Contents

Adjust guide lines.

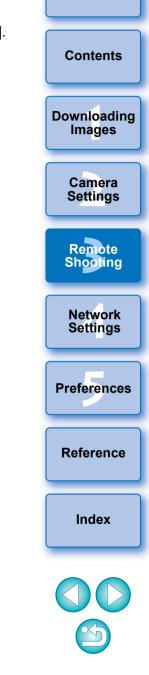

Drag end: change guide line to any angle

- You can drag the middle of a guide line to move it parallelly.
- You can drag the end of a guide line to change it to any angle.
- Click the [Im] button to return all guide lines displayed in step 1 to their original angles and positions.
- By clicking the [____] button, you can set the following items for guide lines in the dialog box that appears.
- [Color]: Click the [Choose] button and select the color of the lines in the dialog box that appears.
- [Width]: Choose a value between 1 and 10 for the width of the guide lines.
- You can uncheckmark the checkbox on the left of the name of a guide line ([Horizontal1] [Horizontal2] [Vertical1] [Vertical2]) to hide each guide line.
- You can click the [Im] button on the right of the name of a guide line ([Horizontal1] [Horizontal2] [Vertical1] [Vertical2]) to return each guide line to its original angle and position.

Move and position the camera.

To hide the guide lines, uncheckmark [Show Guides (Angled)].

Contents Downloadi Images itch Camera Settings

Introduction

Zooming:

Move the zoom lever toward [W] to zoom to wide-angle. Move the zoom lever toward [T] to zoom to telephoto.

Changing zoom speed levels:

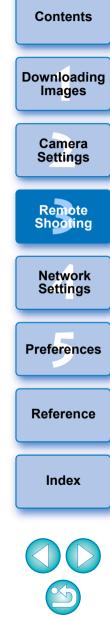

You can change speeds with the speed level switch.

Setting this to [SLOW] provides a slow zoom, suitable for movie shooting.

Setting this to [FAST] provides a faster zoom than [SLOW].

Varying the zoom speed during zooming:

You can adjust the zoom speed with the zoom lever by the amount of its movement. Moving the lever slightly left or right provides a slow zooming. The more you move the lever to right or left side, the more the zoom speed increases.

Constant speed mode

Speed level switch

Zoomina:

Click the [W] button to zoom to wide-angle. Click the [T] button to zoom to telephoto.

Changing zoom speed levels:

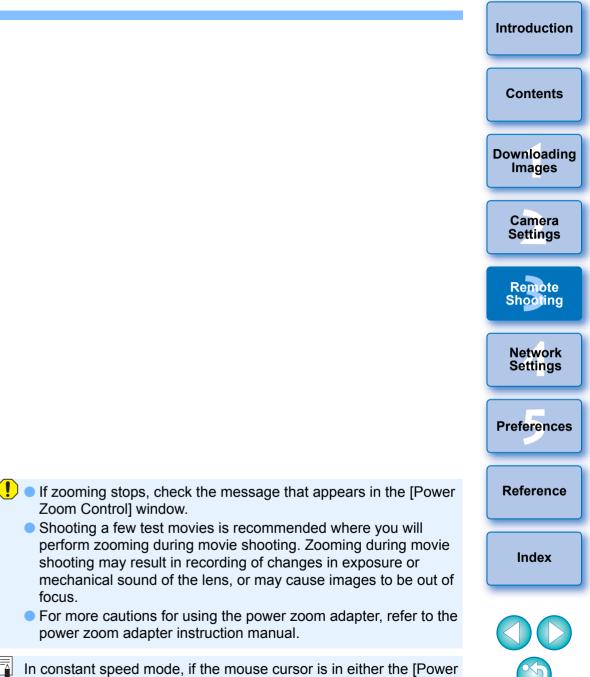

You can change speeds with the speed level switch.

Setting this to [SLOW] provides a slow zoom, suitable for movie shooting.

Setting this to [FAST] provides a faster zoom than [SLOW].

Micro-adjusting zoom speed:

You can finely adjust the speed in one of 15 levels for either [FAST] or [SLOW] speeds with the [Speed level] list box.

- perform zooming during movie shooting. Zooming during movie shooting may result in recording of changes in exposure or mechanical sound of the lens, or may cause images to be out of focus.
- For more cautions for using the power zoom adapter, refer to the power zoom adapter instruction manual.

Zoom Control] window.

-In constant speed mode, if the mouse cursor is in either the [Power Zoom Control] window or the [Remote Live View window], press <W> on the keyboard for wide angle and <T> for telephoto zoomina.

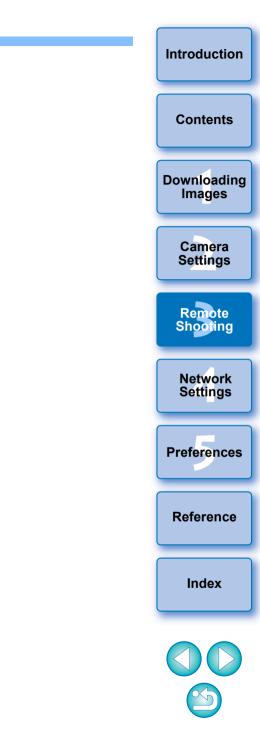

Shooting by Operating the Camera

Even when remote shooting is set, you can still operate the camera and shoot – as when shooting with only the camera. Also, since the shot images are saved to your computer's hard disk, you can shoot large quantities without having to worry about the capacity of the memory card.

Display the capture window (p.37).

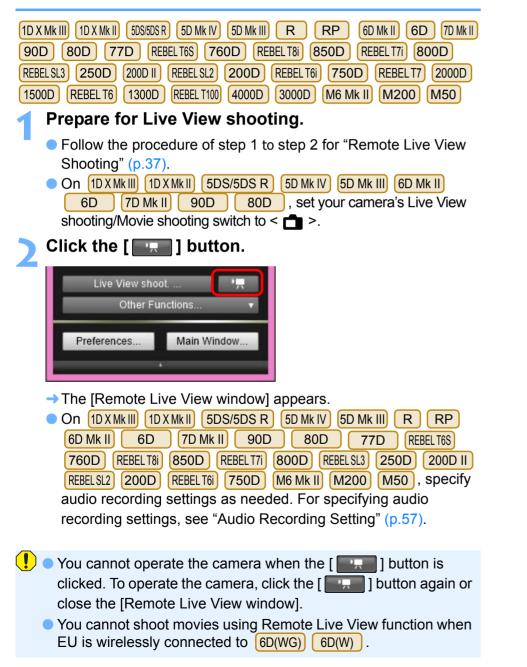

Press the camera's shutter button and take a shot.

→ The shot images are transferred to the computer, DPP starts up automatically, and the shot images are displayed.

Shooting Movies

You can control your camera from EU and shoot movies from your computer screen. Note that you cannot shoot movies without a memory card in your camera.

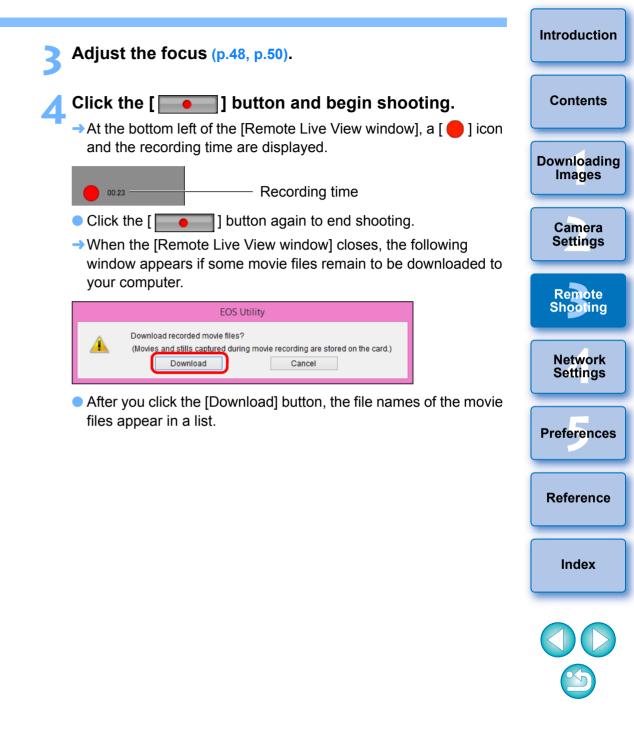

When setting the movie recording size, click [Live View/Movie func. set.], and display the [Live View/Movie func. set.] window before setting.

When the 1DXMkIII R is connected and Canon Log gamma (8bit) is set on the camera, the Canon Log gamma setting icon and [WAssist] (View Assist) button are displayed in the Remote Live View window (p.116, p.118).

Canon Log gamma is a movie characteristic to attain wide dynamic range. As a result, the image displayed in the Remote Live View window has low contrast and is somewhat dark compared to when a Picture Style is set.

If you click the [VAssist] (View Assist) button, the movie image will be displayed in the Remote Live View window with a conspicuous characteristic. This makes it easier to check the angle of view, details, etc.

Note that even if you click the [VAssist] (View Assist) button, it will not affect the movie recorded to the card. (The movie will be recorded to the card with Canon Log gamma.)

- The following movie compression formats can be selected on 1DX 1DC.
 - ALL-I (I-only): Compresses one frame at a time for recording. Although the file size will be larger than with IPB, the movie will be more suited for editing.
 - IPB: Compresses multiple frames at a time efficiently for recording. Since the file size will be smaller than with ALL-I, you can shoot longer.
 - 1D C • MJPG:
- When shooting a movie at 4K (4096 x 2160 pixels), Motion JPEG is used to compress the movie recorded.

Each frame is compressed separately and recorded without compression between frames. The compression rate is therefore low. Since the image size is large, the file size will also be large.

 When the <u>1D C</u> is connected and Canon Log gamma is set on the camera, the Canon Log gamma setting icon and [<u>WAssist</u>] (View Assist) button are displayed in the Remote Live View window (p.116, p.118).

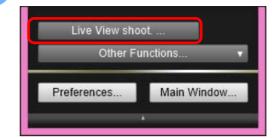

Canon Log gamma is a movie characteristic to attain wide dynamic range. As a result, the image displayed in the Remote Live View window has low contrast and is somewhat dark compared to when a Picture Style is set.

If you click the [VAssist] (View Assist) button, the movie image will be displayed in the Remote Live View window with a conspicuous characteristic. This makes it easier to check the angle of view, details, etc.

Note that even if you click the [VAssist] (View Assist) button, it will not affect the movie recorded to the card. (The movie will be recorded to the card with Canon Log gamma.)

- → The [Live View/Movie func. set.] window closes.
- Click [Live View shoot.].

- → The [Remote Live View window] appears.
- On <u>1D X</u> <u>1D C</u>, specify audio recording settings as needed.

For specifying audio recording settings, see "Audio Recording Setting" (p.57).

Adjust the focus (p.48, p.50).

Click the [] button and begin shooting.

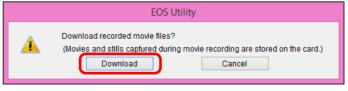

→ At the bottom left of the [Remote Live View window], a [] icon and the recording time are displayed.

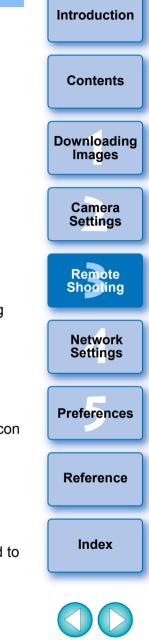

Recording time

Click the [] button again to end shooting.

When the [Remote Live View window] closes, the following window appears if some movie files remain to be downloaded to your computer.

 After you click the [Download] button, the file names of the movie files appear in a list.

Movie files having a check mark removed from its file name are not downloaded. When downloading movie files to your computer afterwards from the camera's memory card, use the method described on p.11 to p.15 of this Instruction Manual to download.

Timer-controlled Shooting

Two types of timer shooting are available where the camera automatically takes shots at a specified time or a specified number.

Timer Shooting

You can automatically take a shot when the specified time elapses.

Display the capture window (p.38).

Click the [🚺] button.

- → The [Timer shooting settings] dialog box appears.
- Enter a delay time and click the [Start] button.
 - Enter a value between 0 seconds and 99 minutes 59 seconds in one-second increments.
 - → The shot is taken when the specified time elapses.

Remote Interval Timer Shooting

You can automatically take shots by setting the interval between shots and the number of shots to be taken.

- EOS DIGITAL cameras other than 5D Mk IV RP 6D Mk II Display the capture window (p.38).
- Click the [🚺] button.
 - → The [Timer shooting settings] dialog box appears.

Checkmark [Remote Interval timer shooting].

Enter the shooting interval and the number of shots.

- Enter a value between 5 seconds and 99 minutes 59 seconds in one-second increments.
 - The minimum number of interval shots is two. The number of shots you can take at intervals depends on the available space on your computer's hard disk.

Click the [Start] button.

The shots are taken at the specified intervals and for the specified number of shots.

On certain types of computer, if you set a short interval between shots and there is insufficient time to transfer and save the images, it may not be possible to take shots at the specified interval. In this case, set a longer interval between shots and take the shots again.

The shooting mode cannot be changed when the [Timer shooting settings] dialog box is displayed. Display the [Timer shooting settings] dialog box after setting the shooting mode.

5D Mk IV RP 6D Mk II

Display the capture window (p.38).

Click the [🚺] button.

→ The [Interval timer shooting] dialog box appears.

Select the mode.

Select from the following 2 modes.

[Camera function] mode:

This mode uses the camera's interval timer shooting function. You can perform shooting at precise intervals. Shooting at short intervals is also supported. You can also operate the camera during interval timer shooting.

[Computer control] mode:

Performs interval timer shooting using computer.

Bulb shooting is also supported.

- Click the [Camera function] or [Computer control] button.
- → Either settings dialog box appears.

Specify settings.

[Camera function] mode:

Enter the shooting interval and the number of shots.

- Enter a shooting interval between 1 second and 99 hours 59 minutes 59 seconds in one-second increments.
- Enter the number of shots between 01 and 99. If set to 00, there is no limit on the number of shots and shooting continues until the interval timer stops.

[Computer control] mode:

Specify settings by the following steps.

- 1) Checkmark [Remote interval timer shooting].
- 2) Enter the shooting interval and the number of shots.
 - Enter a shooting interval between 5 seconds and 99 minutes 59 seconds in one-second increments.
 - The minimum number of shots is two. The number of shots you can set depends on the available space on your computer's hard disk.

Click the [Start] button.

The shots are taken at the specified intervals and for the specified number of shots.

Introduction

- In [Computer control] mode, on certain types of computer, if you set a short interval between shots and there is insufficient time to transfer and save the images, it may not be possible to take shots at the specified interval. In such a case, set a longer interval between shots and take the shots again.
 For cautions for using [Camera function] mode, refer to the
 - For cautions for using [Camera function] mode, refer to the description regarding interval timer shooting in the camera's Instruction Manual.
- The shooting mode cannot be changed when the [Timer shooting settings] dialog box is displayed.

Set the shooting mode before displaying the [Timer shooting settings].

- To end interval timer shooting while in progress:
 - In [Camera function] mode, click the [Stop] button in the [Interval timer] dialog box.

In [Computer control] mode, click the [Cancel] button in the [Timer shooting settings] dialog box.

- If the [Flash control] menu is displayed on the camera's LCD monitor, EU's [Flash function settings] window automatically closes.
- You can use modeling flash by clicking the [Modeling flash] button. You should only use modeling flash for a maximum of 10 times continuously. (For more information, refer to the Instruction Manual provided with the flash.)
 - Information displayed in the [Flash function settings] window is updated by clicking the [_____] button, so it is synchronized with the current flash settings. (Since setting changes made with the flash unit are not reflected in the [Flash function settings] window, you can click the [____] button and update the [Flash function settings] window to match the current flash settings.)
 - You can name and save the flash setting as a file separate from the image by clicking the [Save] button. You can also click the [Load] button and load this file into EU to use it for other shooting.
 - You can use flash shooting and Remote Live View shooting (p.37) together.

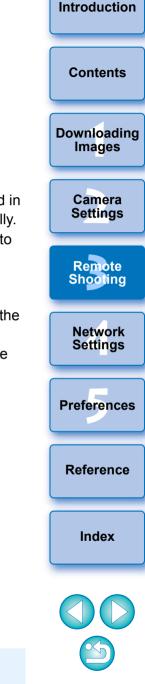

However, you cannot use modeling flash during Remote Live View shooting.

 Settings that can be performed in the [Flash function settings] window differ depending on the flash and camera.

7 Click the [●] button to shoot.

- The shot image is transferred to your computer and displayed in the [Quick Preview] window. Then, DPP starts up automatically.
- When the AF/MF switch button on the capture window is set to [AF] and the cursor is moved to the [] button, AF/AE is executed (p.113).
- You can quickly review the shot image in the [Quick Preview] window displayed before DPP starts up. You can also resize the [Quick Preview] window.
- You can show/hide the [Quick Preview] window by clicking the [Other Functions] button in the capture widow and selecting [Quick Preview] from the menu that appears.

For a list of [Flash function settings] window functions, see p.115.

• You can also shoot using the <space> bar on the keyboard.

HDR PQ Settings

1D X Mk III

HDR stands for High Dynamic Range and refers to technology that enables expression of "a wider range of brightness" than with the conventional range. The conventional range of brightness is referred to as SDR (Standard Dynamic Range) = "standard brightness range" when compared to HDR.

The "PQ" in HDR PQ stands for Perceptual Quantization and refers to the gamma curve of the input signal for displaying HDR images.

Setting HDR PQ on the camera enables the camera to produce HDR images conforming to the PQ specification defined in ITU-R BT.2100 and SMPTE ST.2084 (with actual display depending on monitor performance).

Shots are taken as HEIF or RAW images.

In the viewer window, the [IIII] mark is displayed for HEIF images. and the [HDR] mark for images shot with HDR PQ settings.

Shooting with HDR PQ Set on the Camera

Display the capture window (p.38)

Set HDR PQ on the camera.

- Select [HDR PQ settings] in the [Shooting menu], and in the dialog box that appears, select [Enable] in the [HDR PQ] menu and click the [OK] button.
- → [HDR PQ] is set on the camera.

HDR PQ Mo	de	
HDR PQ	Enable	~
	ок	Cancel

Take a shot.

For details on Remote Live View display when HDR PQ is set on the camera, see "Remote Live View Display when HDR PQ is Set"

Remote Live View Display when HDR PQ is Set

If you set HDR PQ on the camera for Remote Live View shooting, the Remote Live View window uses an HDR-PQ-capable display.

In an HDR Environment

On a Windows 10 computer with its screen set to HDR display (an HDR environment), the Remote Live View window is displayed in HDR PQ (10-bit).

[HDRPO] is displayed in the Remote Live View window.

In an SDR Environment

If the computer's OS is Windows 7/8.1/10* (SDR environment), images are displayed so that they approximate display in HDR PQ in an HDR environment. However, the large difference in regions that can be rendered between HDR PQ and SDR environments results in a different impression of colors and gradations.

- [HDRPO], [VAssist]/VAssist2] are displayed in the Remote Live View window.
- You can click the [VAsist1] button and then switch between V.Assist1/ V.Assist2 in the dialog box that appears. Any switch between V.Assist1/V.Assist2 is also applied to the camera settings. For details on V.Assist1 and V.Assist2, see the camera instruction manual.
- * If the screen has not been set to display in HDR mode.

Editing Picture Styles Using Remote Live View Function

D X Mk II 1D C 5D Mk IV 7D Mk II

You can start up Picture Style Editor (software for creating Picture Style files) (hereinafter PSE) from EU and link with EU's Remote Live View function. By linking PSE with EU's Remote Live View function, you can edit a Picture Style while viewing the editing results in real time, and adjust the image quality more efficiently while editing. Versions of PSE compatible with this function are version 1.16.20 and later.

Follow the procedure from step 1 to step 3 for "Remote Live View Shooting" (p.37).

Click [Other Functions] and then [Edit Picture Style].

→ PSE starts up and the [Edit Picture Style] window (Remote Live View window for editing Picture Styles) appears.

Edit a Picture Style using PSE.

 For details on editing Picture Styles using PSE, refer to the "Picture Style Editor Instruction Manual" (PDF electronic manual).

You cannot click the [] button in PSE to specify colors you want to adjust on a Remote Live View image in EU.

- The results of editing a Picture Style using PSE are shown in real time in the [Edit Picture Style] window. This allows you to edit a Picture Style while viewing the results.
- While using this function, EU's capture window and all camera functions are not available.

After editing is completed, it is recommended that you save the edits to your computer as a Picture Style file before going on to step 4. Picture Styles registered to the camera cannot be extracted and saved to your computer as Picture Style files. For details on saving Picture Style files, refer to the "Picture Style Editor Instruction Manual" (PDF electronic manual).

Click the [Register] button in the [Edit Picture Style] window.

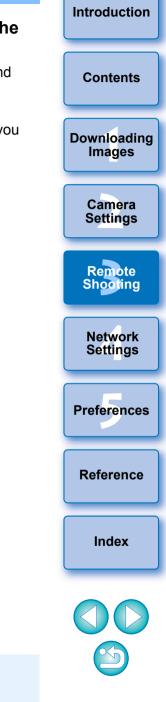

→ The [Register Picture Style] dialog box appears.

Select and enter required items, and then click the [Register] button.

 After selecting [User Def.], enter information in [Caption] and [Copyright].

(Entry in [Caption] is essential.)

The edited Picture Style is registered to the camera when you click the [Register] button.

When you finish this function and then start it up again, the message [Continue editing from last time?] appears. You can select [Yes] to continue editing the last Picture Style.

Registering Background Music to a Camera Memory Card

-		-	-			
RP	6D Mk II	6D	90D	80D	77D	REBEL T6S
760D	REBEL T8i	850D	REBEL T7i	800D	REBEL SL3	250D

M200						

You can register WAV-format music files, saved to your computer, to the camera's memory card as background music. Registered background music can be played together with a Video Snapshot Album or slideshow played on the camera.

Connect your camera and computer. Start up EU and click [Camera settings].

→ The [Camera settings] window appears.

Click [Register Background Music].

Setting Web Services

٥	5D Mk IV(WG	b) 6D Mk I	I 6D(WG	6D(W)	80D(W	/) 77D	REBEL T6S(W)
	760D(W)	REBEL T7i	800D	REBEL SL2	200D	REBEL T6i(W)	750D(W)
	REBEL T7	2000D	1500D	REBEL T6(W)	1300D(V	V) REBEL T100	4000D
	3000D						

How to register Web services to the camera is explained here.

To use Web services, first register accounts with those Web services. For detailed information, refer to the Web site for each Web service.

- A computer is required for specifying settings for Web services.
- For how to specify Web service settings with 90D M6 Mk II

	M6	M5	M3	M10	M100	REBEL T8i	850D	
RE	BEL SL3	250D	200D II	R	RP	M200	M50	, refer

to your camera's Instruction Manual.

- Introduction Connect your camera and computer. Start up EU and click [Camera settings]. → The [Camera settings] window appears. Contents If your camera and computer are not connected, [Web Service Settings] is not displayed. Downloading Click [Web Service Settings]. Images EOS Utility 3 EOS XXX Camera Settings Firmware update Date/Time/Zone Setting Register lens aberration correction data Remote Register Picture Style File Shooting Owner's name/Author/Copyright Register Background Music Web Service Settings Network Settings Preferences... Quit Preferences
- Begin specifying required settings in the dialog box that appears.

- To use this function, the EOS Web Service Registration Tool must be installed.
- To use Web services, an environment enabling Internet access (subscription with a provider as well as installed browser software and an in-place line connection) is required.
- For version and settings information on a browser (Microsoft) Internet Explorer, etc.) for accessing Web services, check with each Web service.
- Provider connection fees and transmission fees to provider access points are incurred separately.

Registering IPTC Information

1DXMkIII 1DXMkIII (firmware version 1.1.0 or later) **5DMkIV R** If this function for adding IPTC* information is equipped with the camera, you can edit and register IPTC* information. IPTC information registered on the camera can be added to shot images.

IPTC information is comment information, such as captions, credits, and shooting location.

* International Press Telecommunications Council

Connect your camera and computer. Start up EU and click [Camera settings].

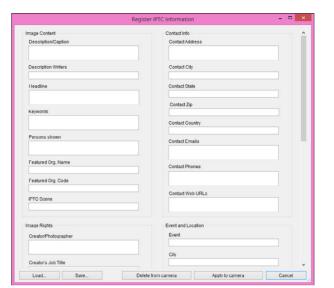

- → The Camera settings window appears.
- If your camera and computer are not connected, the [Register IPTC information] option is not displayed.

Click [Register IPTC information].

→ The [Register IPTC information] dialog box appears.

Edit and register information as needed.

 [Register IPTC information] is displayed with current camera settings entered.

Even if IPTC information is not set, [Author] and [Copyright] information are displayed if they are registered in the camera.

- Clicking the [Apply to camera] button sets the IPTC information to the camera and then also sets the camera's Custom Function [Add IPTC information] option to [ON] and closes the [Register IPTC information] dialog box.
- Clicking the [Delete from camera] button deletes all IPTC information registered in the camera and then also sets the camera's Custom Function [Add IPTC information] option to [OFF] and closes the [Register IPTC information] dialog box.
 After clicking the [Delete from camera] button, IPTC information is not added to shot images.
- You can click the [Save] button to save information displayed in the current [Register IPTC information] dialog box as an XMP file.
- You can click the [Load] button to load IPTC information saved to a file using this function.

Introduction

Network Settings

1D X Mk III

This function allows you to make camera network settings. You can perform the following features.

- (1) Create, edit, and delete network settings
- (2) Write and load network settings to and from files
- (3) Write and load network settings to and from the camera
- (4) LAN settings
- (5) FTP settings

System Requirements

OS	Windows 10 (Version 1607 or later), Windows 8.1, Windows 7*
Memory	Minimum 256 MB
Hard disk	Minimum 100 MB of available space
Display	1366 x 768 pixels, 16-bit color or better

Compatible with 32-bit/64-bit systems for all versions except Starter Edition

- This function requires adequate knowledge of configuring your wired LAN and FTP server. Canon cannot provide support for configuring wired LANs or FTP servers.
- Note that Canon cannot be held liable for any loss or damage from erroneous network or FTP server settings. In addition, Canon cannot be held liable for any other loss or damage caused by use of this function.
- When using wired LAN functions, establish appropriate security at your own risk and discretion. Canon cannot be held liable for any loss or damage caused by unauthorized access or other security breaches.

Connect your camera and computer. Start up EU and click [Camera settings]. → The [Camera settings] window appears. If the camera and computer are not connected, the Network settings] option does not appear. Click [Network settings]. Click the [Load settings] button and in the dialog box that appears, select the [SET] file you want to load settings from, and click the [Load] button.

→ Settings appear in the network settings main window.

Introduction

Contents

Deleting Settings from the Camera

Display the network settings main window (p.92).

Click the [Delete settings] button in [Camera operations], and in the dialog box that appears, select the [SET] file you want to delete, and click the [Delete] button.

→ Settings are deleted from the camera.

Preferences

You can change each of the EU functions on each tab sheet of the preferences window to make them easier to use.

Preferences

On the main window, click the [Preferences] button.

→ The [Preferences] dialog box appears.

Specify the required settings and click the [OK] button.

→ The settings are applied to EU.

Basic Settings

You can specify the operation when EU starts up.

Preferences						
ic Settings	Destination Folder	File Name	Remote Shooting	Linked Software	Tim • •	
Startup Ad	tion					
• s	how main window					
OS	how [Select and dowr	nload] screen	1			
OS	how [Remote shootin	g] screen				
() E	xecute (Start automati	c download]				
L Autom	atically display Quick	Preview wind	ow			

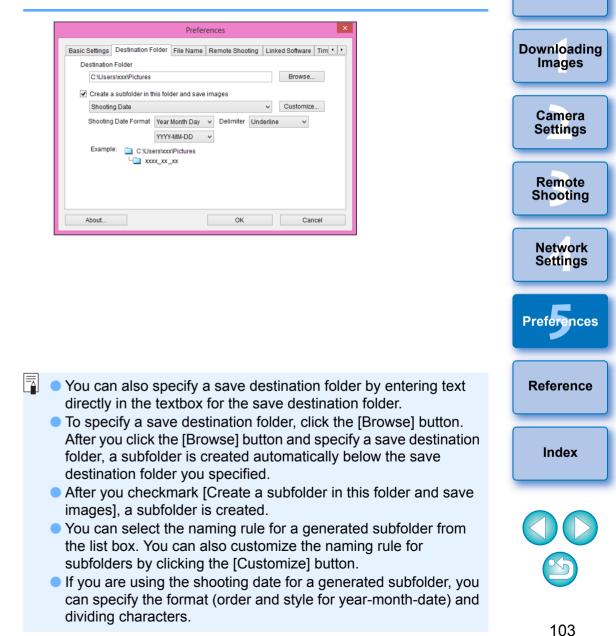

- When [Show [Select and download] screen] is selected in [Startup Action], the viewer window (p.111) appears.
- When [Show [Remote shooting] screen] is selected in [Startup Action], the capture window (p.113) appears. (With M6
- M5 M3 M10 M100, the main window appears.)
 When [Execute [Start automatic download]] is selected in [Startup Action], the [Save File] dialog box (p.11) appears and downloading to your computer begins. When all the images have been downloaded, DPP starts up automatically and the downloaded images are displayed in DPP's main window.
- If you remove the check mark from [Automatically display Quick Preview window], the [Quick Preview] window will no longer appear during Remote Live View shooting or when loading images.

Destination Folder

You can specify the save destination folder of images downloaded from your camera or of images shot remotely.

Introduction

Contents

File Name

You can specify the file name of images downloaded from your camera or of images shot remotely.

	YYYY-MM-DD	~				
About			ОК		Cancel	

- When specifying an image's file name, select a naming rule for the file from the list box. ([Do not modify] is selected, images are saved with the file name set in the camera.) You can also customize the naming rule for files by clicking the [Customize] button.
 - You can set prefix characters, number of digits for serial numbers, and the start number individually for file names.
 - If you are using the shooting date in file names, you can specify the format (order and style for year-month-date) and dividing characters.

Remote Shooting	Introduction
u can set operations performed during remote shooting. is function cannot be used with M6 M5 M3 M10 1100.	Contents
Preferences × Basic Settings Destination Folder File Name Remote Shooting Linked Software Tim • •	Downloading Images
□ Rotate image	Camera Settings
✓ Turn on camera's LCD monitor when Live View starts	Remote Shooting
About OK Cancel	Network Settings
 If you checkmark [Rotate image], you can set a function that rotates shot images regardless of the camera's position during shooting. Set the rotation angle in the capture window (p.113). 	Preferences
 If you checkmark [Start Live View], the [Remote Live View window] automatically appears when the camera's Live View starts up. (except R RP M6 Mk II M200 M50) Is you checkmark [Stop Live View], the [Remote Live View 	Reference
window] automatically closes when the camera's Live View ends. If the camera's Live View display is active when Remote Live View ends, the camera's Live View display also ends. (except R RP M6 Mk II) M200 M50)	Index
 If you checkmark [Turn on camera's LCD monitor when Live View starts], the camera's LCD monitor displays the image at the same time as Remote Live View starts. (except R RP M6 Mk II M200 M50) 	
 If you checkmark [Change settings using mouse wheel on [Remote Shooting] screen], you can use the scroll-wheel on your mouse to change settings over the capture window display/ 	
control buttons or the [Flash function settings] window.	104

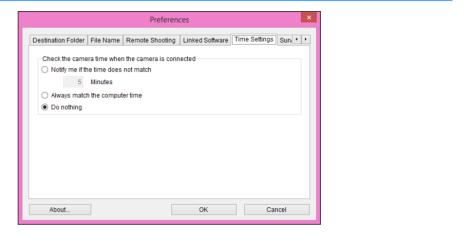

Linked Software

From the list box, you can select the linked software that starts up when images are downloaded from the camera or when images are shot remotely. Also, you can register third-party software as linked software by clicking the [Register] button.

Downloading

Images

Camera Settings

Remote Shooting

When you select [Notify me if the time does not match], you can set the number of minutes, from 1 to 60 minutes, for which the camera clock and computer clock are out of sync before you are notified.

When you start up EU, the camera clock and computer clock are compared. If the time difference exceeds the set number of minutes, a notification dialog box is displayed.

 When you select [Always match the computer time], the camera is set to the computer's time when you start up EU.

In the window displayed when you click the [Register] button, you can specify the type of images to be posted when linked third-party software is started up.

Survey

You can change survey send settings.

Troubleshooting

If EU is not operating correctly, see the items below.

Installation could not be completed correctly

 Select an administrator-level privilege ([Computer administrator], [Administrator], etc.) as a user setting. You cannot install the software if a user setting other than an administrator-level privilege is selected. For detailed information on selecting an administrator-level privilege, refer to your computer User's Manual.

EU does not start up

When	6D(W) 6	D(WG) RE	EBEL T6S(W)	760D(W)	REBEL T6i(W)	750D(W)
REBEL T7	2000D	1500D	REBEL T6(W)	1300D(W)	REBEL T10	0 4000D
3000D	M6	M5	M3	M10	M100	is connected to

a computer with an interface cable and the camera's Wi-Fi setting is enabled, EU cannot start up. Disable the Wi-Fi setting and re-connect the camera and the computer.

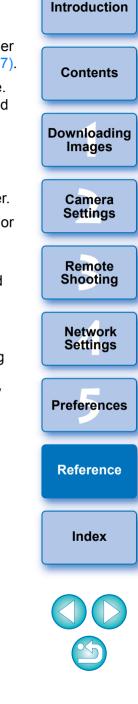

The card reader does not detect the SD card

 Depending on the card reader and computer OS used, SDXC cards might not be correctly detected. In such a case, connect your camera and computer with an interface cable, and transfer the images to your computer.

EU and the camera are not communicating

- Click the [e] icon on the taskbar of the desktop, select [Exit] on the window displayed, and double-click the [EOS Utility] icon on the desktop to start up EU.
- EU does not operate correctly on a computer if its system requirements are not met. Use EU on a computer with compatible system requirements (p.2).
- Push the plug of the interface cable all the way into the socket. Loose connections can cause faults and malfunctions (p.7).

- Check that the camera's power is turned on (p.9).
- EU and the camera may not communicate normally with a cable other than the EOS DIGITAL camera-dedicated Canon interface cable (p.7).
- Connect your camera and computer directly with an interface cable.
 Do not connect the camera via a hub; doing so may prevent EU and your camera from communicating normally.
- If you connect multiple USB devices (not including the mouse or keyboard) to your computer, the camera may not communicate normally. If the camera cannot communicate normally, disconnect USB devices other than the mouse or keyboard from your computer.
- Do not connect more than one camera to the same computer. Two or more cameras may not operate normally.
- Do not connect your camera with the computer while performing "Linked shooting" with a WFT series Wireless File Transmitter (sold separately). Your camera may not operate normally.
- If there is insufficient charge left in the camera battery, the camera cannot communicate with EU. Replace with a fully charged battery. Your camera may be able to use a household power outlet by using accessories (sold separately). For details, refer to the Instruction Manual provided with your camera. Your computer does not supply power to the camera through an interface cable.

108

Communication between EU and the camera disconnected

- If you do not perform any operation while the camera and computer are connected, depending on the computer system, a confirmation message may appear on the screen asking whether you wish to continue communicating with the camera. If you do not perform an operation while this message appears, communication with your camera is discontinued and EU shuts down. In this case, turn the camera's power switch to < OFF >, then again to < ON > and start up EU.
- Do not put your computer to sleep mode while it is connected to the camera. If your computer goes into sleep mode, never disconnect the interface cable while your computer is still in sleep mode. Always wake your computer up while it is still connected to the camera. Depending on the type of computer, disconnecting the interface cable while your computer is in sleep mode could prevent the computer from waking up correctly. Refer to the computer User's Manual for more information on sleep mode.

A non-Canon flash does not fire during Remote Live View shooting

 When a non-Canon flash is mounted on the camera for Remote Live View shooting, set [Silent LV shoot.] in the camera to [Disable].

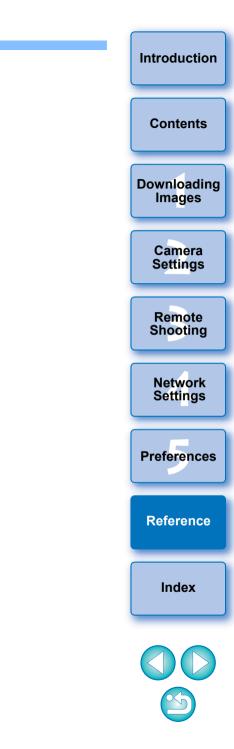

Uninstalling the Software

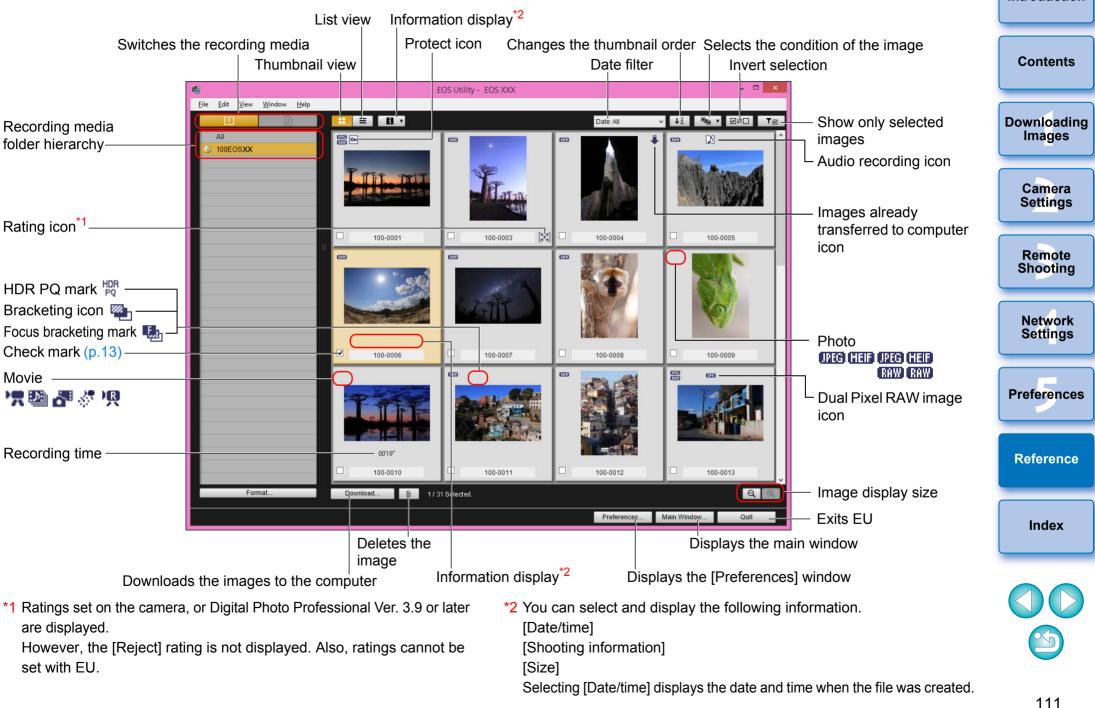

- Click the [r] icon on the taskbar of the desktop and select [Quit].
- Before starting the software uninstallation, exit all programs you are using.
- Log in under the Administrator privileges when uninstalling the software.
- Uninstall the software according to the OS software uninstalling method.

Uninstallation of the four software packages below is required.

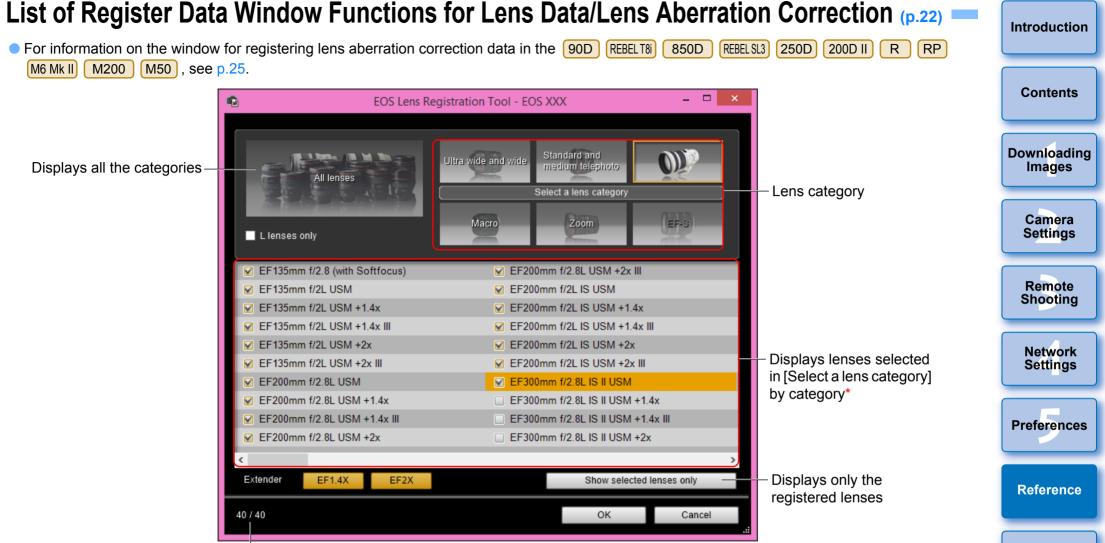

- Canon Utilities EOS Lens Registration Tool
- Canon Utilities EOS Utility 2
- Canon Utilities EOS Utility 3
- Canon Utilities EOS Web Service Registration Tool
- To prevent computer malfunctions, always restart your computer after you have uninstalled the software. Also, reinstalling the software without first restarting your computer is likely to result in computer malfunctions.

List of Viewer Window Functions (p.13)

Introduction

No. of lenses registered in the camera/No. of lenses that can be registered

The window displayed differs depending on the camera to be connected.

- Lens names displayed in the [Register lens data]/[Register lens aberration correction data] window may be partially shortened depending on the lens type. Note that you do not have to register correction data for an EF-M lens.
 - Depending on the camera to be connected, lens model names with which the check mark cannot be removed may be displayed in the [Register lens data]/[Register lens aberration correction data] window. This indicates that it is not necessary to register the correction data for the respective lenses to the camera.
- * If <u>1DXMkII</u> <u>5DMkIV</u> is connected, the following are also displayed (p.23).
- Download status of DLO lens data to the computer

- Registered status of DLO lens data to the camera

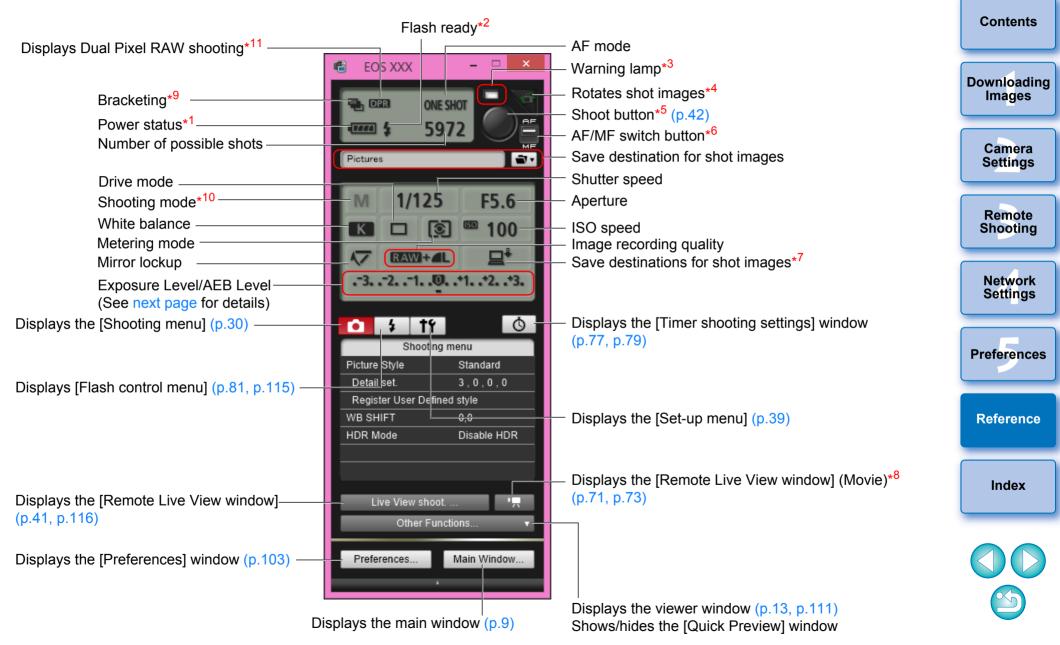

Index

List of Capture Window Functions

Displayed items differ depending on the model and settings of the camera connected.

• For *¹ to *¹¹ explanations, see the next page.

Introduction

- When using the battery, the charge level is displayed.
- Appears after flash charging is complete and the cursor is moved to the Shoot button.
- *3 Turns green when shooting was successful. Turns red when shooting was unsuccessful or is impossible. Also blinks during countdown for self-timer shooting.
- Each time you click the button, the shot image rotates 90 degrees. To make this function available, checkmark [Rotate image] in preferences ([Remote Shooting] tab sheet) (p.104).
- When the AF/MF switch button is set to [AF], AF/AE is performed when the cursor is moved to the Shoot button.
- Even when it is set to [MF], "AF" appears in the shooting information for the shot image.
- You can select the destination where the images are to be saved. In movie mode, shot movies are saved only to the camera's memory card.
- Not displayed on 1D X 1DC
- During HDR (High Dynamic Range) shooting on 5DS/5DS R RP 6D Mk II 5D Mk III R 5D Mk IV 6D 7D Mk II 90D , during [HDR Backlight Control] shooting on 80D
